Title: Ag Tag Program 03-05-09

The Problem:

The Ag Tag Program is inadequately responsive to current year deer populations and negatively impacts the hunting enjoyment of neighboring landowners. The length of the Ag Tag season causes mature buck kills and cruel treatment of unborn and newly born fawns. There are safety and land value concerns.

Be it resolved, that the Conservation Congress at its annual meeting held in Barron County on April 13, 2009 recommends that the Conservation Congress work with the Department to take action to correct this situation by introducing rule change to greatly reduce the length of the Ag Tag season and to have tag numbers better relate to current year herd size.
