FIELD and MAP VERIFICATION PLAN

Golden Sands Dairy will put into place a field verification plan that will accurately investigate any and all restrictive features that are adjacent to the cropland that is included in the Golden Sands Dairy NMP. At this time the cropland fields are not established. The present condition of the fields makes it impossible to accurately determine the field boundaries and corresponding conditions that need to be managed according to the WPDES guidelines. These conditions include: lakes and ponds, perennial and intermittent streams, wells, and conduits to surface water and possible flow channel erosion.

Fields are planned to be put into production at approximately 2000 acres per year, starting in 2013. Fields will be investigated as they are put into production. Manure applications are not expected until the fall of 2014. All fields in production will be investigated by September 15 of 2014, with the understanding that fields must be verified and restriction maps updated, and receive DNR approval prior to any manure or waste water applications by Golden Sands Dairy.

The following chart will be used to document field investigations.

Date	Field Name	Person	Existing Field or Map Feature(s) checked?	Photos? ID #	New Field Features Identified?	Action(s) Taken?
	PC 52		WELL LOCATIONS, FIELD BOUNDRY			

	PC 56		WELL LOCATIONS			
	PC 58		FLOW CHANNELS & EROSION			
	PC 61		FLOW CHANNELS & EROSION			
	PC 62		FLOW CHANNELS & EROSION			
	PC 69 PC 70		WELL LOCATIONS			
7-12-2012	PC 69, PC70 PC 72	JEFF FRASE	INTERMITTENT STREAM SWQMA		YES	MAPS CORRECTED TO ID SWQMA – 300 ft BUFFER
7-12-2012	PC 32-PC 36	JEFF FRASE	INTERMITTENT STREAM SWQMA		YES	MAPS CORRECTED TO ID SWQMA – 300 ft BUFFER
