Title: Fish regulations on Booth Lake

The Problem: A fish survey was done summer of 2015. It was found that Booth Lake has an over abundance of stunted bass which are starving.
Encourage harvesting of bass and attack bass population on multiple fronts with harvest predation and rule changes.
Booth Lake is going to plant 500 fingerling northerns over 5 years to provide top predator pressure and establish cribs in lake.

Be it Resolved that the conservation congress take action to help correct situation by introducing rule changes for bass northern and panfish
BASS: present rule min length 14" daily bag 5
proposed no min length but no bass kept between 14"-18" daily bag 5
NORTHERN: present min length 26" daily bag 2
proposed min length 32" daily bag 1
PANFISH: present daily bag 25
proposed 25/10 a total of 25 panfish may be kept perday but no more than 10 of any species
