Hello,
I am a senior student enrolled in the UW-Parkside environmental studies bachelor program and would like to demonstrate my concern for FOXCONN and it's waste water discharge. I am unsure how it is possible to permit FOXCONN to discharge waste water when they have not released what exactly they are going to be discharging into our water and how there is lack completely of scientific research and methods on how they plan on "treating" this water before it is discharged. It is a threat to our health and our environment to allow something that could be completely destructional to such a fragile ecosystem and part of the entire Earth's 3% of freshwater source.

Sincerely,

Kasey Warmington
