Subject: Foxconn Project
Date: Tuesday, March 20, 2018 11:37:54 AM

To Whom it May Concern:

I am writing to expresses my opposition to the FoxConn water usage project. As a resident of Mount Pleasant, and a lifelong resident of Southeastern WI, I implore you to stand up against this project so that our environment and our natural resources can be preserved. FoxConn is known to be in terrible violation of environmental standards and safeties at their other plants, and this project will be absolutely devastating to the well being of our Great Lakes. Allowing this corporation to access 7 million gallons of water or more is unacceptable, especially since they will not be returning a large percentage of that water, and especially since damaging micro particles will still be present even in treated water. We are already concerned about our air quality as a result of this ridiculous factory, please stand up for our water! 13,000 jobs are not worth the damage we will cause to our environment. I am also very concerned that allowing this access will open up a slippery slope for other corporations who will want access as well. Please make sure we honor the Great Lakes Compact.

The DNR was established to protect our natural resources. I hope that you will deny access, and not be bought out by greedy special interests, politicians, and businessmen. There are some things that can not be repaired.

Sincerely,
Kim Jensen Bohat
