DNR, Ladies and Gentlemen,

Attended your public meeting on March 7 in Sturtevant regarding Racine's application to divert 7.5 million gallons of water a day to Mt. Pleasant. In listening to both your (the DNR's) opening comments and the public comments that followed, pro and con, I was left with thought that the request could not be permitted either by the rules of the Great Lakes Compact (and the meeting's own parameters) or by simple common sense.

The attached PDF goes into the details of what I found to be the salient points and the failures of those supporting the application.

I fully understand the pressures involved with your decision. But what now seems immense will be as nothing if you fail and the Great Lakes are endangered because of it.

No pressure. And sincerest regards,

Charles Hoot
