Hello,
Below are my comments on the Racine Diversion Application.

As a resident of Racine County I completely disagree with this proposal. Fresh Water is a valuable resource and our Great Lakes are some of the last pristine areas to get fresh water. I think taking 7 million gallons a day is outrageous and not in the interest of the public's greater good. Diverting water to help Foxconn is not diverting the water solely for public water supply purposes. It is diverting the water for a private entity which is not even an American company. This is an extremely irresponsible use of our Natural Resources. Foxconn should not be given special treatment or any sort of exemptions from environmental regulations. Returning treated water to Lake Michigan is nowhere near returning it to its original state. Our Great Lakes are already too polluted and dumping used water into the lake is not a responsible or sustainable practice. I do not support this proposal and it should not be passed.

Thank you,
Valerie Knurr
