The DNR must be accountable on this issue. WI has a history of strongly protecting its citizens with strong protections. We must keep these high standards.

The great Lakes Compact cannot continue to agree to manufacturing use of Lake Michigan for Foxconn.
Mount Pleasant

Continue to demand strict environmental guidelines.
Demand water not returned to be filtered and safe.
There are safeguards and processes to clean waste chemicals.
Demand to know what chemicals will be disposed of in waste water.
Wet lands must be protected. We just can't make up fro the real deal of a true natural wetland. WI is a great resource for clean water tables. We must not chip away at our historically science based laws for short term economic gains.
