Killer Traps On Dryland

They are called Killer traps for a reason anything that gets into them, targeted game, untargeted game, protected game and even our pets are graveyard dead. The springs on a Killer trap are so strong that you can't compress them by hand, a trapper uses a special tool to compress the springs Even if you were close to your pet when he got caught you wouldn't be able to get him out. All you could do is watch him slowly choke to death.
I can't belive as good as the Wisconsin Trappers Ass. is that they let their own greed overrule them with no respect for untargeted game and our pets rather then fix the problem themselves.
Their are other traps that are a lot saver. Leghold traps, Cooncuffs and live traps.

Ban all Killtraps from dryland sets.
