

2023 SPRING FISHERIES SURVEY SUMMARY

TEAL LAKE, SAWYER COUNTY

Report by Evan Sirianni

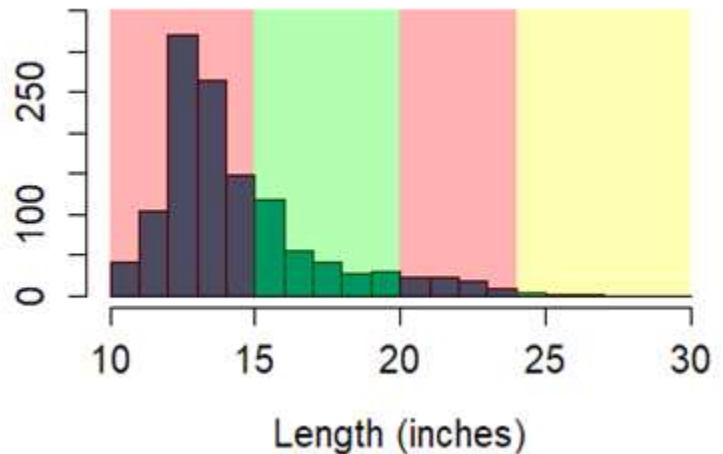

The Wisconsin Department of Natural Resources (DNR) Hayward Fisheries Management Team conducted a fyke netting survey on Teal Lake from May 2-8, 2023. The primary target was walleye, but useful data was also gathered on muskellunge, northern pike, yellow perch and black crappies. Up to 10 nets were set overnight for four total nights, which resulted in 31 total net-nights of effort. An electrofishing survey was conducted on May 25, 2023 to target largemouth bass, smallmouth bass and bluegills and included 4 miles of shoreline. Quality, preferred and memorable sizes referenced in this summary are based on standard proportions of world record lengths developed for each species by the American Fisheries Society.

WALLEYE

Captured 23 per net-night ≥ 10 inches	
Quality Size $\geq 15''$	28%
Preferred Size $\geq 20''$	6%

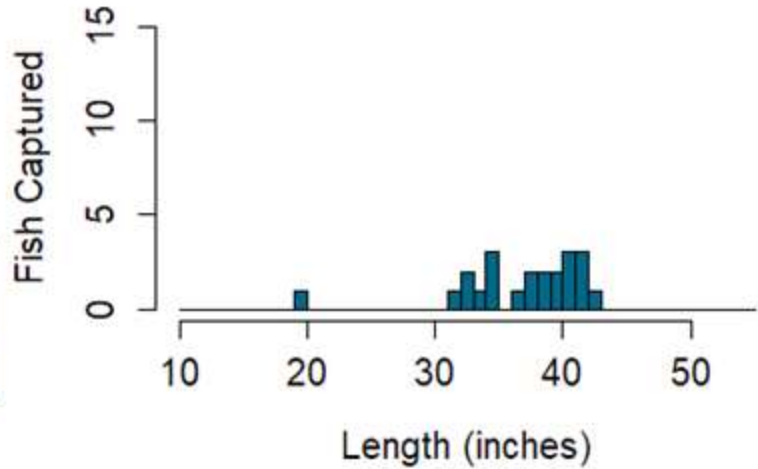

Fish Captured

MUSKELLUNGE

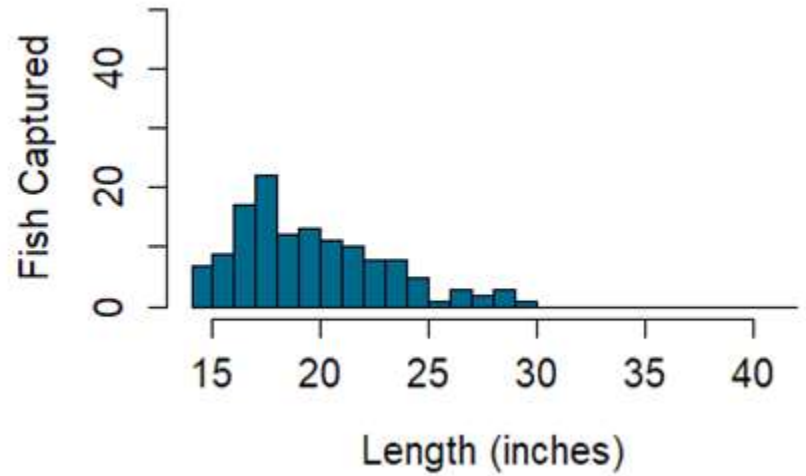

Captured 0.4 per net-night ≥ 20 inches	
Quality Size $\geq 30''$	81%
Memorable Size $\geq 42''$	5%

NORTHERN PIKE

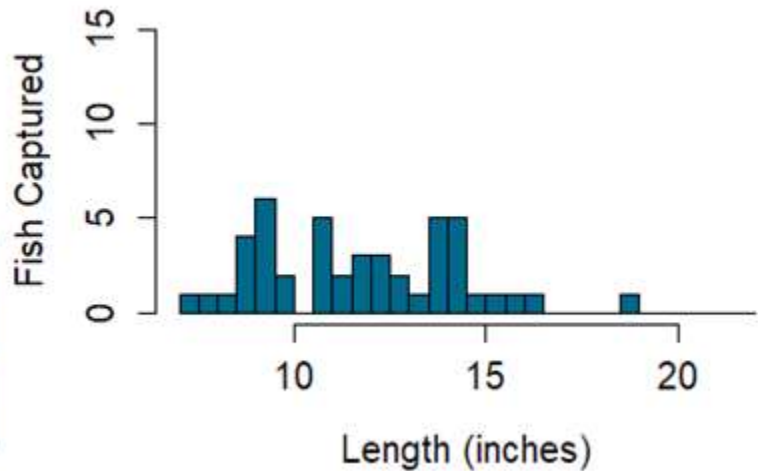

Captured 4.6 per net-night ≥ 14 inches	
Quality Size $\geq 21''$	31%
Preferred Size $\geq 28''$	3%

SMALLMOUTH BASS

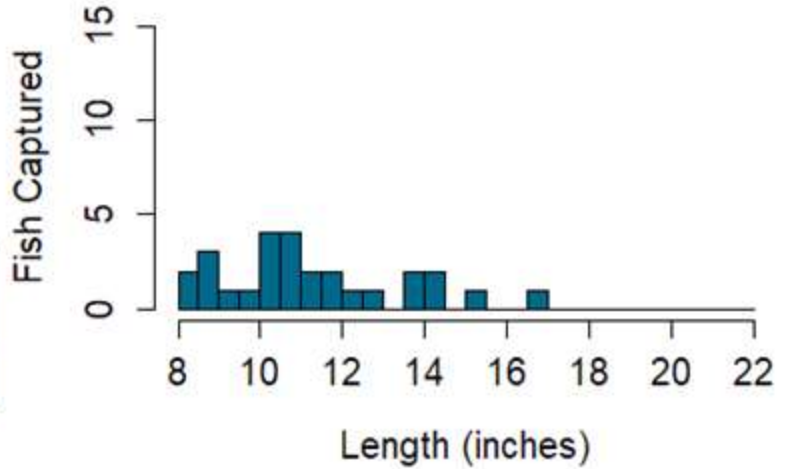

Captured 12 per mile ≥ 7 inches	
Quality Size $\geq 11''$	57%
Preferred Size $\geq 14''$	22%
Memorable Size $\geq 17''$	2%

LARGEMOUTH BASS

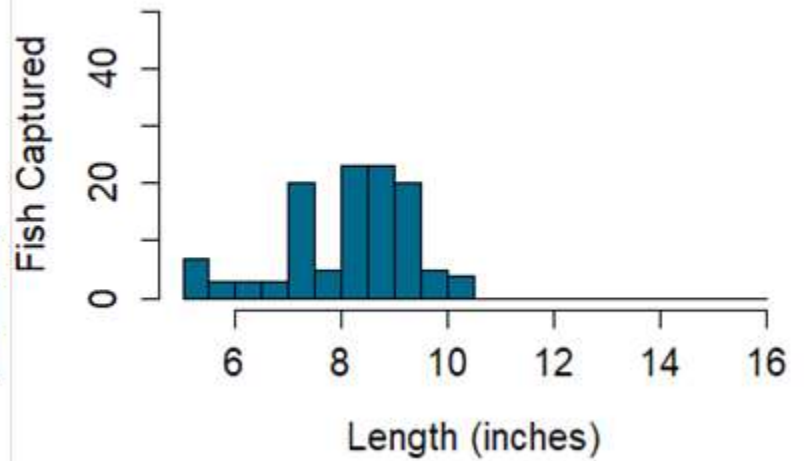

Captured 6.8 per mile \geq 8 inches	
Quality Size \geq 12"	30%
Preferred Size \geq 15"	7%

BLACK CRAPPIE

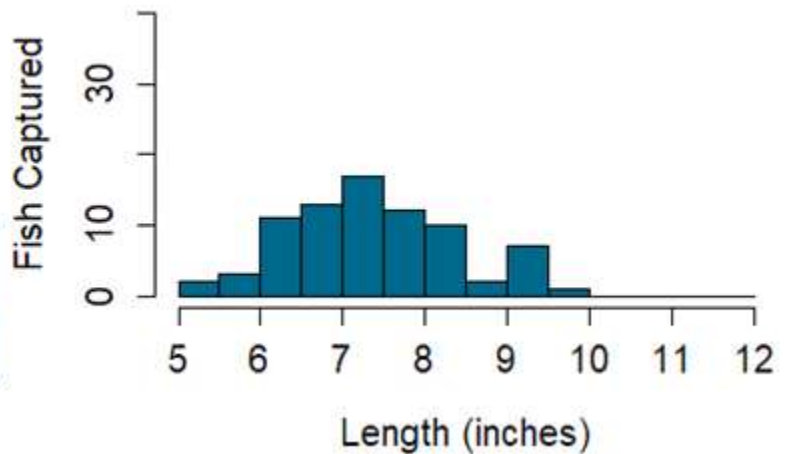

Captured 4.9 per net-night \geq 5 inches	
Quality Size \geq 8"	65%
Preferred Size \geq 10"	3%

YELLOW PERCH

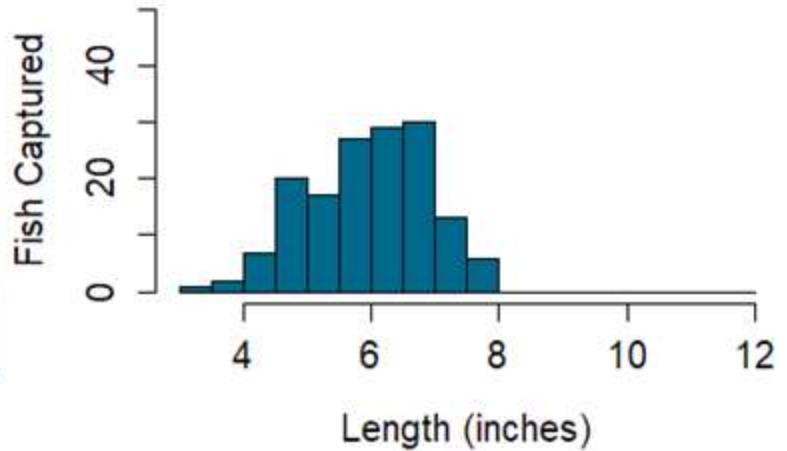

Captured 46 per net-night \geq 5 inches	
Quality Size \geq 8"	26%
Preferred Size \geq 10"	0%

BLUEGILL

Captured 155 per mile \geq 3 inches	
Quality Size \geq 6"	51%
Preferred Size \geq 8"	0%

SUMMARY OF RESULTS

The netting survey was well timed for capturing walleyes along with other species, such as muskellunge, northern pike and black crappies. Weather played a factor during the duration of this survey, with heavy winds pushing ice around the lake that damaged two of the fyke nets that were set. The water temperature was still cold, around 38-39 degrees Fahrenheit at the start of the netting survey. The electrofishing survey conducted in late May was timed well for capturing bass and bluegills moving into shallower water as the spring progressed. During the electrofishing survey, two northern longear sunfish were captured, a rare species in Wisconsin. Teal Lake is categorized as a Complex-Cool-Dark lake according to the DNR fisheries classification system. “Complex” refers to the number of gamefish present within the water body. “Cool” and “Dark” terms refer to the lake’s temperature and water clarity in reference to lakes of the same classification. This report compares catch rate results to lakes of the same classification of Complex-Cool-Dark.

WALLEYE

Walleyes in Teal Lake were relatively abundant; however, the size structure was low. The catch of walleyes in Teal Lake during the netting survey was 23 fish per net-night. This is a very high catch rate and puts it above the 90th percentile of Complex-Cool-Dark lakes. The size of the walleyes captured were on the smaller side, with only 28% of the fish measuring longer than 15 inches and 6% measuring at a length over 20 inches. Walleyes have been stocked in Teal Lake on an “every-other-year” basis in odd-numbered years. The regulation for walleyes on Teal Lake is a daily bag limit of five in total, where walleyes between 15-20 inches may be kept and one fish over 24 inches (corresponding to the colors in the figure above).

MUSKELLUNGE

The muskellunge catch rate during the netting survey was 0.4 per net-night, putting Teal Lake between the 25th and 50th percentiles for lakes of the same classification. Impressively, 81% of the muskies captured were above 30 inches in length, while only 5% of the fish were above 42 inches. There is a daily bag limit of one muskellunge, with a 40-inch minimum length limit.

NORTHERN PIKE

Northern pike have a substantial population in Teal Lake, but their size was lacking in the survey. Northern pike were captured at a rate of 4.6 per net-night. This is a reasonably high catch rate that puts Teal between the 75th and 90th percentile of lakes in the same classification. Size was not impressive with only 31% of the pike measuring longer than 21 inches, 3% longer than 28 inches and no fish breaking 30 inches. The daily bag limit for northern pike in Teal Lake is five, with no minimum length limit.

SMALLMOUTH BASS

Smallmouth bass were collected during the electrofishing survey in late May on Teal Lake. They were captured at a rate of 12 fish per mile, which is considered a very high catch rate and puts Teal Lake above the 95th percentile of lakes of the same classification. The size of smallmouth bass was sub-par, with only 22% of smallmouth captured above 14 inches, and only one fish was captured that was above 17 inches. The daily bag limit for bass on Teal Lake is five combined of the two bass species, with a 14-inch minimum length limit.

LARGEMOUTH BASS

Largemouth bass in Teal Lake had a slightly above-average catch rate of 6.8 fish per mile. The size of largemouth bass was similar to that of smallmouth bass, with only 30% of the fish captured measuring longer than 12 inches and only two fish longer than 15 inches. The daily bag limit for bass in Teal Lake is five combined of the two bass species, with a 14-inch minimum length limit.

BLACK CRAPPIE

The catch of black crappies during the netting survey was slightly above average (4.9 fish per net-night) compared to lakes of the same classification. Crappies that were above 8 inches made up for 65% of the catch. Only 3% of crappies were at or greater than 10 inches in length. There is a daily bag limit of 25 panfish on Teal Lake, but no more than 10 of any one species.

YELLOW PERCH

Yellow perch were captured at an above-average rate (46 fish per net-night), putting Teal Lake between the 75th and 90th percentile for lakes of the same classification. The size of perch was nothing glamorous, with 26% of perch caught being longer than 8 inches, and no perch were captured above 10 inches. There is a daily bag limit of 25 panfish on Teal Lake, but no more than 10 of any one species.

BLUEGILL

The catch of bluegills (155 fish per mile) was between the 50th and 75th percentile for lakes of the same classification. Bluegills continued the trend of small panfish in Teal Lake, with an underwhelming size structure of only 50% of the fish measuring over 6 inches and no bluegill over 8 inches. There is a daily bag limit of 25 panfish on Teal Lake, but no more than 10 of any one species.
