I am five years into my seventies and have never in my lifetime experienced the assault of one political party on our most precious resource, fresh water. Only one percent of the earth's water is fresh. The Great Lakes Compact is designed to protect a significant portion of that one percent for millions of citizens/everyone within the watershed. Now, again corporate welfare demands (coerces) the DNR to approve a plan inimical to the public's welfare, in the name of "jobs," i.e., corporate and political profit. Not even an American corporation in this case.

When will the DNR again serve Wisconsinites as it has in the past?

When will you stop submitting to the plundering of Wisconsin natural resources? Wetlands are being destroyed in the name of the myth that digging borrow pits will replace precious wetlands.

This is sincerely presented to you without much hope that the DNR will listen. You folks certainly know how to perpetuate public despair of those who care for the welfare of Wisconsin's environment for our grandchildren and great grandchildren, not for any selfish financial reasons.
