I strongly urge the Wisconsin DNR to reject the Racine Diversion Application for Mt. Pleasant. The Great Lakes Compact clearly states that all diverted water must be for public use. The parties asking for this diversion seem to be of the mind set that this project is "too big to fail". Before any decisions can be made on this request, Foxconn needs to be fully transparent on all their manufacturing practices.

From what I have researched, the use of 7 million gallons of water per day for an electronics manufacturer seems to be a low estimate of daily usage. I have read no clarifications from Foxconn or the village of Mt. Pleasant if this estimate of 7 million gallons of water usage is for a start up factory that will employee 3,000 workers or a factory at full capacity employing 13,000 workers. I would think that as the number of employees increase, production would increase and the use of water would increase.

Foxconn also needs to provide the DNR with a list of all chemicals being used in the production process, a complete plan on how they will treat water before it is sent back to the Racine Water Utility, how they will insure that no water is leaked into the ground water supply and how they will dispose of solid waste left from the chemicals.

Please consider this application carefully as your decision will greatly affect the future of Mt. Pleasant, Racine, Wisconsin and the integrity of the Great Lakes Water Compact.

Thank you,
