This is in regards to the application for water diverted from Lake Michigan to Foxconn.

What good is a compact if it is to be broken for profit from a corporation? From what I have researched,many details are still missing.But,of coarse,the application process has been "re-arranged"so that it sounds like everything is just the way it should be...This compact was developed to protect our Great Lakes in the first place and this application is breaking every rule of it.

The compact states water being diverted is to be used for PUBLIC consumption,NOT a private corporation.The 7 million gallons they would use would not be returned to the lake [or very little of it] .With day after day of pumping , from now until the taxpayers get done paying for it [25,plus??? years],and no water being returned,how much of Lake Michigan will be left,especially when more corporations want to be 'TREATED" the same as Foxconn? The door is wide open for that picture.

Foxconnn has been exempt from almost all of the permitting requirements. Next on the list is the air quality standards to be emitted and wetlands have been green-lighted to be filled in. Once Foxconn was allowed to fill them in,it was shortly after,Walker gave the OTHERS the green light to do the same,so it will be the same for OTHERS to do the same with the water from Lake Michigan.

This is a disaster waiting to happen...Please deny this application and PROTECT our Great Lakes,for us and for the future.Thank you.
