Re: Great Lakes Compact and Foxconn Water Diversion

To whom it may concern:

I am opposed to the diversion of water from Lake Michigan to the planned Foxconn facility. Review by the Regional Body is mandatory for any such diversion to take place.

#1. Foxconn is not within the Great Lakes Basin. (Racine is not going to consume the water. It will be diverted from Racine to Mount Pleasant which is outside of the Great Lakes Basin.)

#2. The water will not be used primarily for human public consumption, as in the case of the diversion to Waukesha. Rather it will be used for industrial purposes.

#3. The water taken out will not be returned to Lake Michigan. There will soon come a time when the lake can no longer support all these straws sucking it dry.

#4. There are no specific details about how the water will be treated - if it will be.

The Great Lakes Compact was designed to protect this precious resource - WATER. The proposal by the city of Racine does not meet the requirements or the spirit of the Compact.

Please deny this application. Please protect our water. It is an **irreplaceable** natural resource.

Sincerely,

Eileen M. Hesseling
