Comments to the DNR

I have lived in SE WI all of my life (70 years) and really value the environment we have. The DNR and EPA have been working to improve that environment. I know that there are some problems, but nothing compared to the pollution Foxconn will bring.

Regulations should not be changed or relaxed for a foreign company or for any company in the state. This would be a huge step backwards. I am opposed to you granting them the permission they need.

We must protect our land, air and water. We must protect our Great Lakes from the pollution of a huge company like Foxconn. Lake Michigan is vital to our area, supplying fresh water and many forms of recreation. Foxconn will be using a lot of water and returning polluted water to the Lake should never ever happen. Dilution is never the answer to pollution!

I also really worry about the quality of the air we breathe with such a large company like Foxconn so close to us. The run off from rain will also be a problem. Too many roofs and parking lots will cause flooding in the area. Will our ground water be polluted too? Please stop this project and protect the area we live in.
