Comment to the Wisconsin DNR

March 19, 2018

I am following the environmental meetings about Foxconn.

After hearing comments from professional people on environmental issues at the meeting inMt. Pleasant, I am even more concerned. Scientist, men and women with college degrees onthese issues, and other people who really care about our state and country including air, water,soil and the environmental regulations stated their concerns.

Now we hear that the state is going to lower the ozone requirements for Foxconn.Is the Governor trying to kill us!!

Foxconn is going to pollute our water and air! Heavy metals and dangerous chemicals are not the way we want to go. Other manufactures have to follow all the regulations of our state and for Foxconn rules are being changed to benefit them.

Do not pass this project!
Speaking as a tax payer – SAVE WISCONSIN!
