Wisconsin Transverse Mercator Projection
NAD 1983, 1991 adjustment

Cartography by Bill Shockley

Percent change between 1990 and 1997 in the area of a township classified as "suitable for agriculture" for tax purposes. "Suitability" is decided by current soil characteristics and may not reflect actual use.

These data may give misleading results in townships with a very small area of land classified as suitable for agriculture or where land suitable for agriculture is not being used for agricultural purposes.

Compiled by Jill Bukovac, the University of Wisconsin-Madison from data from the Wisconsin Department of Revenue.
