The project is all set up now -- Project ID: CLMN-WaterLevel-1005800

Later we'll have to figure out more in terms of how the data relates to the benchmark or a reference point. I'm sure it does... knowing Mary. Also, I suspect USGS is somehow involved with Moon Lake too.

Hi Becka: The reason there is a range of dates for each lake livel sampling is that I never knew when I had time** to wade out to the USGS stake in the lake bed or have calm water to get a reading. So over the years in order to get a simple table for easy comparison for members of my lake district, I just started recording data in a comparitive window of dates. I will immediately start a new chart specifically for CLMN with specific dates for 2012. My only suggestion for including our past data in your system is to simply select the median of the inclusive dates and use that figure. Statistically (yes, I took a post-grad course in statistics) it should still be valid data.

** I have just retired from 4 years serving as a Vilas County Supervisor and am now busy as a major fund-raiser in trying to raise $3.26 million for a new public library in Eagle River. (Since I am now 80, I hope to have 10 more years to send you data.

We have the data you sent to CLMN via Sandy Wickman on Now. 2nd of last year and are wondering what dates the measurements were actually taken on. The chart you included shows a range of dates rather than a single date. We're just a little unsure how to record this in our system. Any explanation as to why you've recorded the data the way you have would be great.
