Madison, WI 53701-2659

**Subject: Clarification of PFAS compound names and abbreviations on Cycle 11 list**

Dear Ms. Ayers:

The Department of Natural Resources (DNR), in a letter dated April 10, 2019, requested your agency's review of 40 substances, including 34 per- and polyfluorinated substances (PFAS), for possible development of groundwater standard recommendations. That list of substances was designated the "Cycle 11" list.

Laboratory analysis of PFAS compounds is new and evolving, and the names and abbreviations of PFAS compounds reported by laboratories has not been consistent. Consistent PFAS compound names and abbreviations for lab analysis reporting have now been established by the DNR Lab Certification Program. The Department is therefore providing your agency an updated Cycle 11 list (attached) that reflects the DNR Lab Certification Program established lab reporting PFAS compound names and abbreviations.

Changes to the original Cycle 11 list PFAS compound names and abbreviations, on the attached updated list, have been highlighted. Note that on the original Cycle 11 list the PFAS compound Gen-X was included twice (as PFPrOPrA and as HFPA-DA). One of those Gen-X listings has been removed from the updated Cycle 11 list. Also note that the sodium salt (NaDONA) of the PFAS compound DONA was listed on the original Cycle 11 list. This compound is now listed on the update as its acid form (DONA). And, the original Cycle 11 listing of F-53B has been replaced with its two component analytes, F-53B Major and F-53B Minor.

Please let us know if you have any questions on this matter or would like additional information. We appreciate the opportunity to work with you on this important public health issue.

Sincerely,

Darsi J. Foss  
Administrator  
Division of Environmental Management

red = name and/or abbreviation change to reflect WI DNR Lab Certification Program PFAS lab analysis reporting conventions

blue = sodium salt (NaDONA) replaced with acid form (DONA) per analytical laboratory reporting convention

purple = F-53B replaced with its 2 component analytes, F-53B Major and F-53B Minor

green = duplicate GenX compound eliminated
