I strongly object to the requested diversion of Lake Michigan water to supply this company. Here's why -

1) Almost 40% of the 7 million gallons will not be returned to the lake, due to "consumptive use" by a private company, not the general public, as designed by the Great Lakes Compact. This sets a terrible precedent.

2) There is no assurance or even information about how the returned water will be treated before being returned.

I'm disappointed that our state's DNR is promoting this plan without due diligence - we must do better to uphold the intent of protecting the Great Lakes.
