Attached are comments for the Racine diversion plan,

What benefit is there for Wisconsin to allow for diversions of water? Where will the 60% not lost to manufacturing of the 7 million gallons proposed be discharged and was is the effect?

What environmental/storm water plans are in place by Foxcon? What protections will be in place? What management practices will be in place and how will they be enforced?

What is a basis for allowing water to be diverted for a private, foreign corporation rather than for public consumption?

Regards,
Genevieve Stollenwerk
