Subject: 7 million gallons a DAY!!!!
Date: Wednesday, March 21, 2018 10:03:02 AM

Dear DNR and whomever else is evaluating this proposal,

When you are considering the FOXCONN application to use Lake Michigan water, PLEASE do not let them slide on any part of criteria. Do not rush into this agreement, checks all claims at least three times. Verify every little thing. Due diligence to the Nth degree; make sure the persons forecasting the long term effects are running models looking at more than one variation of water replacement projections. If it sounds bad and it looks bad, and most people think it is bad, well darling, it is probably going to be BAD!

I am so against this because I know that our wonderful resource is a delicate thing. Taking 7 MILLION gallons A DAY is going to have a BAD effect on our lake. It is not worth it. DON'T let them. Please PLEASE don't. Our Lake is not an Infinite thing, please be the steward the lake needs for its survival. Thank you.

Valerie
