The Great Lakes Compact was established to protect our freshwater resources and reserve its use for public necessity, not be taken advantage of to appease a private company as the state continues to bend its rules for Foxconn. We demand stringent rules on how returned water is treated and a penalty for water that never makes it back to our watershed.

It's asking too much to offer our tax dollars and allow abuse of our law to syphon off our valuable natural assets. Please reconsider such lenient offerings to a company willing to go to the highest bidder of sacrifices.
