## Resolution

*The Problem:* Wisconsin spring turkey hunters are looking for more hunting opportunities without interference from other hunters.

*Whereas,* Hunter numbers need to be controlled to prevent interference

*Whereas,* The state NWTF biologist states that there are no biological objections to continuous seasons of turkey hunting.

*Whereas,* The two day (Monday and Tuesday) rest time during each spring hunting period is unnecessary.

*Whereas,* The sale of leftover turkey hunting permits creates additional hunting opportunity

**BE IT RESOLVED,** that all Wisconsin spring turkey hunting permits be zone specific and for a seven day period running from Monday to Sunday.
