Resolution 5806

Elk Season in December(as per law already on books) only on the condition the herd size is **over 250 elk**.

**Problem:**

An early hunting season disturbs and disrupts breeding and more importantly breaks up harems. We have a delicate situation with the small herd. 200 are arbitrary—the herd needs to be much larger to be able to sustain hunting management. We also need to increase the strains of DNA with in the herd.

Any and all management laws must have consultation from elk biologist and local herd management teams.

Questions:

The Elk Season of December(currently on books) be adhered to with a 250 population as herd size trigger with 10% bull harvest.
