WI Conservation Congress 2013

Title: Stocking State Hatchery fish

The Problem, The DNR fish hatchery personnel stock fish without local Conservation Club help and are always stressed for time to stock fish,.

Many Conservation organizations throughout the State would like to be involved and help stock fish in their local area,

Most times fish are planted at highway bridges when with local help, fish could be disturbed

Away from highway bridges so the fish have a better chance of surviving longer and

Local DNR fish managers could be the link to have hatchery staff work with the local people but do not work directly with hatchery personnel to help make the connection between local clubs

and the hatchery staff. A simple email or phone call is all that is needed to one local person

at the time fish are to be delivered to stocking locations for local help to be at the site,

Be it resolved, that there needs to be an effort to solve this problem by a connection being

Implemented between the local fish managers and hatchery staff and there needs to an effort

to involve the conservation clubs that wants to help in the stocking effort in their local areas.

This not only helps the stocking effort but assures local people the fish have been stocked in the lakes

and streams in their area.
