

09-01-~~06~~¹⁷

CWD is spreading in the State of Wisconsin. No one knows how it got here or how to stop it. They believe it is spreading through saliva, licking of deer, or urine.

WHERE AS, deer farms are selling urine for scents and lures that are not certified CWD free for sale all over the State of Wisconsin and could be spreading the disease.

WHERE AS, drips are being used and we don't know if they come from certified CWD free deer farms.

WHERE AS, licks are being sold and this is truly a saliva to saliva contact. They are wanting to band feeding and bating at least in the CWD counties because of deer licking each other or the transmitting of the disease through saliva.

BE IT RESOLVED, that the Conservation Congress at its annual meeting held in *Chippewa* County on April 10, 2017 recommends that the Conservation Congress work with the state legislature to band all sales or use of scents, drips, and licks in the State of Wisconsin.
