Title: Ban Live Bait

The problem:

Due to the concerns of all matters fishing;

1. State hatchery limitations.
2. Declining Fish populations due to great leaps in technology (cameras, fish finders, GPS, fishing equipment, ice fishing, free time, boats).
3. Problems with invasive species.
4. Extremely complicated live bait rules.
5. Extremely complicated micro-managing of all lake & rivers in the state.
6. Traditional spearing rights.

Solution:

Where as we need to make all forms of sport fishing use artificial bait (plastic, wood, metal, cheese, corn) and any other form of bait that isn't natural, minnows, worms, grubs, leeches, crawfish, anything that is alive, and can transfer an invasive species, or a disease.

Therefore be it resolved at the April 14, 2014 spring hearing of the Wisconsin Conservation Congress, that the rule to ban live bait be adopted.
