Subject: Fort James Ashland Mill Site – Stained Surface Soils/Buried Industrial Wastes
2301 E Lakeshore Dr, Ashland, WI, BRRTS # 02-02-206947

Dear Mr. Toma:

The Department of Natural Resources provided a notice to you that the degree and extent of petroleum contamination at the above-named site was required to be investigated and remediated. We have since been informed that the required investigation and remediation has been accomplished.

On December 5, 2000, the above-named site was reviewed by the Northern Region Closeout Committee for a determination as to whether or not the case qualified for close out under ch. NR 726, Wis. Adm. Code.

Based on the investigative and remedial documentation provided to the Department, it appears that the petroleum contamination at the above-named site has been remediated in compliance with the requirements of chs. NR 700 to 724, Wis. Adm. Code. Therefore, the Department considers the case "closed," having determined that no further action is necessary at the site at this time. However, the case may be reopened pursuant to s. NR 726.09, Wis. Adm. Code, if additional information regarding site conditions indicates that contamination on or from the site poses a threat to public health, safety or welfare or the environment.

Please note that this case closure is contingent upon proper documentation of proper abandonment of the monitoring wells on site. If monitoring wells remain at this site, please provide the documentation that this action has been completed, or have your consultant do so. Please complete Form 3300-5B and send it to my attention at the above address.

If you have any additional information which was not formerly provided to the Department, and which you feel would significantly impact this closure decision, you may submit that information for our re-evaluation of case closure.

Solid waste was discovered during a phase 2 investigation of the mill site performed in June of

*Quality Natural Resources Management
Through Excellent Customer Service*

1998. The solid waste consisted of polyethylene material, ash, cinders, and paper mill sludge (filter cake). Pursuant to a plan you submitted to the Department on August 20, 1998, you chose to address this area under the provisions of chapter NR 500 and, the Department has reviewed the remediation of this area under that chapter. You elected to excavate the solid waste from the north and west sides of the mill building and dispose of the material at your approved Gingles Landfill under a plan modification. The excavation was subsequently backfilled with clean soil.

Based on the information provided to the Department, it appears that the identified solid waste issues were adequately addressed. At this time, no further action is required in this regard. Should further information identify other solid waste issues required further action, the Department reserves the right to seek such action from appropriate parties.

If you have any questions, please call me at 715-365-8990.

Sincerely,
NORTHERN REGION
