Dear Mr. Schmoller:

On behalf of Madison-Kipp Corporation (MKC), this letter provides a summary of the polychlorinated biphenyl-related rain garden excavation activities completed during April and May 2014 related to the Madison-Kipp site located at 201 Waubesa Street in Madison, Wisconsin (Figure 1). The rain garden is located on city of Madison property between the northern boundary of MKC property and the Capital City Bike Path as shown on Figure 1.The activities included soil excavation completed in accordance with the *Rain Garden Soil Removal Work Plan (*Work Plan), dated December 2013. The Wisconsin Department of Natural Resources (WDNR), in conjunction with the United States Environmental Protection Agency (U.S. EPA), provided approval of the Work Plan prior to initiation of the work. A Natural Resources 712.09 submittal certification is included in Attachment A.

The following presents a brief description of the approved work presented in the Work Plan:

- Excavation and disposal of soils within the rain garden containing polychlorinated biphenyl (PCBs) at concentrations above the WDNR's industrial direct contact residual contaminant level (RCL) of 0.744 milligrams per kilogram (mg/kg) to a depth of 4 feet below land surface (bls).

- Collection of confirmation soil samples approximately every 20 feet along the base and side walls of the excavation area.

- Backfill the excavated area with clean material based on specifications provided by the city of Madison.

This letter report documents completion of the PCB-related activities.

Excavation and Confirmation Soil Sampling Activities

Excavation and backfill activities were performed on site between April 7 and May 23, 2014. Prior to beginning the excavation activities, utility marking arrangements were made through Digger's Hotline (the State of Wisconsin Public Utility clearance service), a private utility locator and discussions with the property owners and MKC. An excavation permit (Application to Excavate in the Public Right-of-Way) was also secured from the city of Madison to excavate on city property.

The dimensions of the excavation were heavily influenced by setback zones as dictated by nearby utilities. Originally, the excavation was split into three separate sections due to 10-foot setback zones provided by Madison Gas and Electric (MG&E) around overhead utility poles and the associated guide wires that were situated directly within the planned excavation area. Three rounds of excavation activities were performed at the rain garden:

- Excavation #1 – April 7 through April 9, 2014
- Excavation #2 – May 6 through May 9, 2014
- Excavation #3 – May 22 through May 23, 2014

Excavation #1

Excavation activities began on April 7, 2014 by R.W. Collins (Collins). All excavated soils were stockpiled within areas of the rain garden that were to be excavated later. Soil transportation and disposal was initiated on April 8, 2014 and was completed on April 9, 2014. A total of approximately 224 tons of soil were excavated and disposed of at Advanced Disposal's Glacier Ridge Landfill in Horicon, Wisconsin. Following the completion of soil removal, the excavations were left open pending confirmation sample results.

Confirmation soil samples were collected at approximately every 20 feet along the side walls and base of the excavation areas. A total of 30 side wall samples and 5 base samples were collected during the excavation activities. The soil samples were submitted for laboratory analysis of PCBs by U.S. EPA SW-846 Method 8082. Samples were collected in clean, laboratory-supplied sample containers and placed

in a cooler filled with ice. The samples were submitted using appropriate chain-of-custody procedures.

PCBs were not detected above the WDNR's industrial direct contact RCL in any of the base samples collected. Ten of the twenty side wall confirmation samples collected contained PCB concentrations above the industrial direct contact RCL of 0.744 mg/kg. One side wall confirmation sample (RG-18) contained PCBs above the Toxic Substances Control Act (TSCA) disposal limit of 50 mg/kg. This data was submitted to WDNR with the recommendation to complete additional excavation and confirmation sampling in areas where the confirmation samples exceeded industrial direct contact RCL. A summary of the confirmation soil sample analytical results for the rain garden is presented in Table 1. Copies of laboratory analytical reports are included as Attachment B.

Excavation #2

Following receipt of WDNR approval, a second round of excavation activities were completed in the areas with confirmation samples containing PCB criteria exceedances. The second round excavation areas are shown on Figure 1.

The second round of excavation activities were completed on May 6 through 8, 2014. The excavation was extended to the extent practical as dictated by utility clearance and setback zone restrictions. These excavation activities required encroachment on the setbacks initially established by MG&E. MG&E provided modified setbacks and provided oversight during the soil excavation to ensure the integrity of the utilities in the area.

The soils present in the area of confirmation Soil Sample RG-18 were classified as TSCA hazardous soil, loaded into a roll off box, and disposed of at Environmental Quality's (EQ's) Wayne Disposal Landfill located in Belleville, Michigan. A total of approximately 14.5 tons of soil were excavated and disposed of at EQ's Wayne Disposal Landfill during the second round of excavation. The non-hazardous excavated soils were temporarily stockpiled on and covered with plastic sheeting, then subsequently loaded into trucks and transported to Advanced Disposal's Glacier Ridge Landfill in Horicon, Wisconsin. A total of approximately 119 tons of non-hazardous soils were excavated and disposed of at Advanced Disposal's Glacier Ridge Landfill during the second round of excavation.

Additional confirmation soil samples were collected in line with the original samples that contained PCBs at concentrations above the criteria. A total of 9 side wall

confirmation samples were collected during the second round of excavation for laboratory analysis of PCBs by U.S. EPA Method 8082. Six of the 9 confirmation soil samples contained PCB concentrations above the industrial direct contact RCL. One sample (RG-25) contained PCBs above the TSCA disposal limit.

Due to utility restrictions, only two of the six areas with exceedances could be extended through additional excavation. This data was submitted to WDNR with the recommendation to complete additional excavation and confirmation sampling at two of the six areas where the confirmation samples exceeded industrial direct contact RCL.

Excavation #3

Following WDNR approval, a third round of excavation activities was performed on May 22 and 23, 2014. Soils were excavated from two areas as shown on Figure 1. The excavation areas extended to the edge of the rain garden parcel to the fence line bordering the MKC parking lot to the south and west.

The soils present in the area of confirmation Soil Sample RG-25 were loaded into a roll off box and disposed of as TSCA hazardous soil at EQ's Wayne Disposal Landfill (approximately 15 tons). The soils present in the area of confirmation soil sample RG-30 were temporarily stockpiled on and covered with plastic sheeting, then subsequently disposed of as non-hazardous soil at Advanced Disposal's Glacier Ridge Landfill (approximately 21 tons).

Two confirmation samples were collected following the third round of excavation and submitted for laboratory analysis of PCBs by U.S. EPA Method 8082. Both samples (RG-34 and RG-35) contained PCB concentrations above the WDNR's industrial direct contact RCLs. Additionally, Soil Sample RG-35 contained PCB concentrations above the TSCA disposal limit.

This data was submitted to WDNR on June 5, 2014.

Backfill

Backfill activities were performed by Collins following receipt of the second and third rounds of soil confirmation sample analytical results and WDNR's approval to proceed with backfill activities. As specified by the city of Madison, the excavation areas were backfilled with sand to a depth of 1 foot bls followed by 1 foot of Purple Cow topsoil mix. The excavation was filled and graded by a skid loader and

excavator as close to pre-work conditions as possible. City of Madison contractors will re-establish the vegetation at the rain garden parcel.

Quality Assurance/Quality Control (QA/QC)

Several QA/QC measures were utilized to ensure the integrity of the confirmation soil sampling procedures and laboratory analysis including collecting and analyzing matrix spike/matrix spike duplicate (MS/MSD) samples and field duplicate samples.

Laboratory accuracy was assessed by determining percent recoveries from the analysis of laboratory control samples. Accuracy relative to the sample matrix was assessed by determining percent recoveries from the analysis of MS/MSD samples. Three MS/MSD samples were submitted for laboratory analysis.

Precision is defined as the measure of agreement among repeated measurements of the same property under identical or substantially similar locations. Field duplicate samples were collected at a minimum frequency of one per 20 investigative samples to evaluate the precision of the field sample collection procedures. A total of 3 duplicate samples were taken in the field and submitted for laboratory analysis.

After review of the QA/QC sample data, there was no evidence of contamination or other anomalies that would indicate inaccurate or misrepresented data. All QA/QC sample results were within acceptable limits with the exception of one duplicate sample (DUP-2). The results of Duplicate Sample DUP-2 and parent Sample RG-25 were verified by the laboratory.

Conclusions

Soil excavation and backfill activities were completed at the rain garden in accordance with the WDNR-approved Work Plan. Soils at the rain garden have been removed to the extent practicable to either below the WDNR's industrial direct contact RCL, or safely excavated to MG&E utility buffers. Areas within the rain garden parcel containing confirmation soil samples with concentrations of PCBs above the WDNR's industrial direct contact RCL are presented on Table 1 and shown on Figure 1. Copies of laboratory analytical reports are included as Attachment B. The areas with exceedances at the rain garden parcel will be documented on the WDNR's geographic information system soil registry at case closure.

The soils left in place beneath the MKC parking lot at the location of confirmation Soil Sample RG-35 will be evaluated and addressed separately from the rain garden parcel with WDNR, as this location is not within the rain garden.

If you have any questions or require any additional information, please contact us at 414.276.7742.

Sincerely,

ARCADIS U.S., Inc.

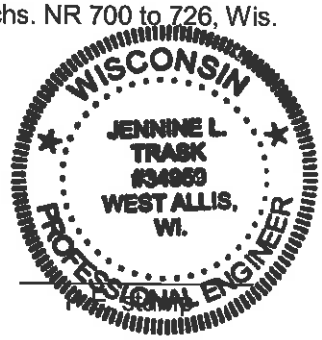
Summary of Rain Garden Soil Removal Activities
Madison-Kipp Corporation
201 Waubesa Street
Madison, Wisconsin

I, Jennine L. Trask, hereby certify that I am a registered professional engineer in the State of Wisconsin, registered in accordance with the requirements of ch. A-E 4, Wis. Adm. Code; that this document has been prepared in accordance with the Rules of Professional Conduct in ch. A-E 8, Wis. Adm. Code; and that, to the best of my knowledge, all information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR 700 to 726, Wis. Adm. Code.



Principal Engineer #34959
Signature, title and P.E. number

I, Christopher Kubacki, hereby certify that I am a scientist as that term is defined in s. NR 712.03 (3), Wis. Adm. Code, and that, to the best of my knowledge, all of the information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR 700 to 726, Wis. Adm. Code.

Comments
No additional comments.

Receipt
The samples were received on 4/10/2014 10:54 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.3º C.

Except:

Received 2 jars with the ID of RG-24, didn't receive RG-23. The only difference between the two jars is one is in black ink and the other in blue ink.

GC Semi VOA
Method(s) 8082: The following sample were diluted to bring the concentration of target analytes within the calibration range: RG-1 (500-74873-1), RG-11 (500-74873-11), RG-13 (500-74873-13), RG-16 (500-74873-16), RG-18 (500-74873-18), RG-19 (500-74873-19), RG-20 (500-74873-20), RG-23 (500-74873-24), RG-3 (500-74873-3), RG-5 (500-74873-5), RG-8 (500-74873-8). Elevated reporting limits (RLs) are provided.

Method(s) 8082: The following sample(s) was diluted due to the abundance of non-target analytes: RG-17 (500-74873-17). Elevated reporting limits (RLs) are provided.

Method(s) 8082: The following sample(s) required a dilution due to the nature of the sample matrix: RG-1 (500-74873-1), RG-11 (500-74873-11), RG-13 (500-74873-13), RG-16 (500-74873-16), RG-18 (500-74873-18), RG-19 (500-74873-19), RG-20 (500-74873-20), RG-23 (500-74873-24), RG-5 (500-74873-5), RG-8 (500-74873-8). Because of these dilutions, the surrogate spike concentrations in the samples were reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8082: The following sample(s) required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: RG-14 (500-74873-14). The reagent lot number used was: 18120.

No other analytical or quality issues were noted.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Login Sample Receipt Checklist

Client: ARCADIS U.S., Inc.

Job Number: 500-74873-1

Login Number: 74873

List Source: TestAmerica Chicago

List Number: 1

Creator: Scott, Sherri L

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.3
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
500-76542-1

Comments
Sample results for 1 and 10 confirmed via re-analysis for PCB.

Receipt
The samples were received on 5/8/2014 10:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.9º C.

GC Semi VOA
Method(s) 8082: The following samples were diluted to bring the concentration of target analytes within the calibration range: Dup-02 (500-76542-10), RG-25 (500-76542-1), RG-26 (500-76542-2), RG-26 (500-76542-2 MS), RG-26 (500-76542-2 MSD), RG-28 (500-76542-4), RG-30 (500-76542-6), RG-31 (500-76542-7), RG-32 (500-76542-8). Elevated reporting limits (RLs) are provided.

Method(s) 8082: Surrogate recovery for the following samples was outside control limits: RG-26 (500-76542-2), RG-30 (500-76542-6). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8082: The following sample(s) required a dilution due to the nature of the sample matrix: Dup-02 (500-76542-10), RG-25 (500-76542-1), RG-32 (500-76542-8). Because of this dilution, the surrogate spike concentrations in the samples were reduced to a level where the recovery calculation does not provide useful information.

No other analytical or quality issues were noted.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits
F1	MS and/or MSD Recovery exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.9c
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

Comments
No additional comments.

Receipt
The samples were received on 5/23/2014 10:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.8º C.

GC Semi VOA
Method(s) 8082: The following samples were diluted to bring the concentration of target analytes within the calibration range: DUP (500-77554-3), RG 34 (500-77554-2), RG 34 (500-77554-2 MS), RG 34 (500-77554-2 MSD), RG 35 (500-77554-1). Elevated reporting limits (RLs) are provided.

Method(s) 8082: The following sample required a dilution due to the nature of the sample matrix: RG 35 (500-77554-1). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
F1	MS and/or MSD Recovery exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ARCADIS U.S., Inc.
Project/Site: MadisonKipp - PCB

TestAmerica Job ID: 500-77554-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Wisconsin	State Program	5	999580010	08-31-14

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

ARCADIS
Infrastructure, environment, buildings

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
