Section 1

Introduction

TRC Environmental Corp. (TRC), on behalf of Madison-Kipp Corp. (MKC), is reporting on the operation, monitoring, and maintenance (OM&M) of the groundwater and soil vapor extraction and treatment systems at MKC's facility at 201 Waubesa Street, Madison, Wisconsin (Site).

1.1 Site Description

The Site is located in the southwest quarter of Section 5, Township 7 North, Range 10 East in Dane County, Wisconsin. The Site Location Map is shown on Figure 1. The Site is approximately 7.5 acres in area, with a 130,000 square foot building occupying much of the Site. The building has a basement and a second floor over part of the footprint. There is a second 6,000 square foot building in the northeast corner of the property, housing the Groundwater Extraction Treatment System (GETS) and storage. The remainder of the Site is predominately paved in asphalt for driveways and parking lots. The Site is zoned M-1 (industrial/manufacturing), and is currently operated as a metal die casting facility.

The Site is surrounded by a mix of commercial, industrial, and residential land use. The Site is bounded by the Capital City Bike Trail to the north, residences to the east, Atwood Avenue to the south, and Waubesa Street to the west. The Goodman Community Center is located to the north across the Capital City Bike Trail. Residences are located adjacent to the east and west sides of the Site. Commercial properties are located to the south.

The Site is located on the northeastern end of the Madison Isthmus, which is a narrow strip of land separating Lake Mendota and Lake Monona. The Site is approximately 1,500 feet north of Lake Monona and approximately 6,800 feet east of Lake Mendota. These two lakes are the hydrologic boundaries for the Site. The topography of the Site is flat, with an elevation ranging from approximately 870 to 880 feet above mean sea level. The Site and surrounding areas are serviced by municipal water supply and sewer systems.

1.2 Site Background

Environmental investigation and remediation activities have been on-going at the Site since 1994. Investigation activities included defining the extent of tetrachloroethene (PCE) and, beginning in 2012, polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs) and Resource Conservation and Recovery Act metals (RCRA Metals). A complete summary of the project background, including the on-site and off-site investigations is included in the 2015

Annual Report submitted to the Wisconsin Department of Natural Resources (WDNR) on April 12, 2016 by Arcadis U.S., Inc. (Arcadis, 2016) and in previous reports referenced therein.

The Site active remediation systems include a Soil Vapor Extraction System (SVE) and a Groundwater Extraction Treatment System (GETS). The SVE system began permanent continuous operation in May 2013 and has been operating since then. In 2015, Arcadis completed the installation of the GETS at the Site, and conducted testing from July 2015 start-up through December 2015. During the start-up period, the system was operated at its 45 gallon per minute (gpm) capacity, but was occasionally offline for system optimization and equipment repairs/modification. The GETS has operated full-time since January 2016.

1.3 Offsite Sub-slab Depressurization System Inspections

MKC completed the annual inspections of the off-site sub-slab depressurization systems in the first quarter of 2016.

1.4 Purpose and Scope

On-going OM&M activities are completed to monitor the status of soil gas and groundwater conditions at the Site and to ensure the treatment systems are operating as designed and in compliance with regulatory standards. OM&M activities include: GETS operation and monthly Discharge Monitoring Reports, SVE operation, quarterly Site groundwater monitoring, and annual Site soil gas monitoring. The purpose of this Annual Report is to provide documentation of OM&M activities performed during July 1 through December 31, 2016.

This Semi-Annual Report describes:

- GETS OM&M,
- SVE OM&M,
- Groundwater Monitoring,
- Site Soil Gas Monitoring, and
- Conclusions and Recommendations.

Section 2

GETS OM&M

MKC is operating a GETS system for extraction and treatment of PCE-impacted groundwater. The system was installed in 2015 and is described in detail in Groundwater Extraction and Treatment System (GETS) Construction Documentation Report (Arcadis, 2015b).

2.1 System Operation

Over the period of July 1 through December 31, 2016, the GETS was generally operated at 45 gpm. The system was occasionally shutdown due to routine maintenance and repairs. Maintenance included air stripper cleaning and an update to the program for the effluent treated water flow transmitter. During the reporting period, minor shut downs also occurred due to system faults related to air bubbles in the peroxide feed line and low effluent vapor flow. On December 2, 2016, the GETS transfer pump between the mixing tank and air stripper was replaced. The location of the extraction well (GWE-1) is identified on Figure 2 and the extent of influence from the extraction well as of October 2016 is shown on Figure 3. MKC personnel complete weekly monitoring of the GETS and an operations summary table is included in Table 1.

A total of approximately 11,107,127 gallons of groundwater were treated during this reporting period. During this reporting period approximately 130 pounds of VOCs were removed. From the start of the system (July 2015) through the end of December 2016, approximately 350 pounds of VOCs have been removed through operation of the GETS. A trend plot depicting the cumulative VOCs removed over time since the start-up of the GETS system is included in Trend Plot A.1 of Appendix A. In addition, the trend plot showing PCE concentration verses time for the groundwater extraction well (GWE-1) is included in Trend Plot A.2 of Appendix A. Additional system operation information is noted in the attached Remediation Site Operation, Maintenance, Monitoring, and Optimization Report Form 4400-194 in Appendix B.

2.2 Monthly Discharge Monitoring Reports

For performance monitoring and permit compliance, MKC personnel collect samples of the extracted groundwater (GETS influent) and treated groundwater (GETS effluent) on a monthly basis. Table 2 provides the influent and effluent laboratory analytical results for this reporting period. MKC submits monthly Discharge Monitoring Reports (DMRs) required for the system operation and discharge permit (Wisconsin Pollution Discharge Elimination System (WPDES) Permit number WI-0046566-6). The DMRs for July through December 2016 were submitted to

the WDNR on August 4, 2016, September 9, 2016, October 3, 2016, November 3, 2016, December 2, 2016, and January 9, 2017 with their respective laboratory analytical reports. A copy of the last submittal from the December 2016 monitoring event is included in Appendix C. There were no exceedances of the permit limits during the 2016 calendar year.

2.3 Monthly Vapor Sampling

The SVE system and GETS produce gases which are combined and treated with granular activated carbon (GAC) for vapor-phase volatile organic compounds (VOCs). The GAC influent and GAC effluent gas are sampled on a monthly basis for performance and compliance monitoring. An analytical summary table with influent and effluent results are included in Table 3 and the laboratory analytical reports are included in Appendix D. The influent concentration of total VOCs compared to time, for the 2016 calendar year, is provided in Trend Plot A.3 in Appendix A. An emission rate was calculated based on the effluent analytical results and combined system flow rate; and results were compared to NR 445 and NR 406. No regulatory standards for effluent emissions from the combined systems were exceeded. Table 4 through 8 include a summary of the monthly emission rates for total VOCs, PCE, trichloroethene (TCE), cis-1, 2, dichloroethene (Cis-1, 2-DCE), and vinyl chloride (VC) for the 2016 calendar year.

Section 3

SVE OM&M

MKC is operating an SVE system for extraction and treatment of shallow soil vapor on the east-northeast portion of the Site. The system began permanent operation in May 2013 and has been in operation since.

3.1 System Operation

The SVE system was operated on a continuous basis during this reporting period, with the exception of occasional maintenance shut-downs to complete general maintenance and repairs. At times during the reporting period the transfer pump for the system vapor liquid separator required repairs to ensure continued operation of the SVE system. Repairs to the system were made in December 2016 and continued into 2017. The system ran intermittently during this time while repairs were being made. Weekly system operation readings are obtained by MKC personnel and a summary of the operational parameters are included in Table 9. VOCs were monitored in the gas removed from each soil vapor extraction well on a monthly basis using a Photoionization Detector (PID). Readings were generally reported less than one parts per million (ppm) during this reporting period with the exception of select monitoring events. An increase in VOC was observed during the October 10, 2016 monitoring event where PID readings ranged between 2.9 ppm (SVE-3) and 33.9 ppm (SVE-8). During the following November 2016 monthly VOC monitoring, the PID readings had decreased with all recorded values below 10 ppm and many below 1 ppm.

3.2 Monthly Vapor Sampling

The treatment and sampling of the gases removed from the SVE are described in Section 2.3. Additional system operation information is noted in the attached Remediation Site Operation, Maintenance, Monitoring, and Optimization Report Form 4400-194 in Appendix B. Quarterly monitoring of the combined SVE influent vapors was completed in September and December of 2016 to assist in monitoring the effectiveness of the system. Laboratory analytical results are included in Appendix D.

Section 4

Groundwater Monitoring

The 2016 groundwater monitoring program at the Site, which included water level gauging and sampling, was conducted as described in the 2015 Annual Report (Arcadis, 2016) and as summarized in Table 10.

4.1 Monitoring Well Network and Sampling Program

The Site contains 42 monitoring wells, 4 multi-port wells, and one operational extraction well (GWE-1). The locations of the wells are shown on Figure 2. Groundwater sampling for field and chemical analyses was performed at 14 monitoring wells and 2 multi-port well intervals in July 2016, and 25 monitoring wells and 18 multi-port well intervals in October 2016. As part of the monitoring program, GWE-1 was sampled in accordance with the monthly permit compliance. These monitoring wells were sampled to evaluate the effectiveness of the GETS operation—which was installed to remove VOCs from the groundwater and provide hydraulic containment to minimize off-site migration—and to evaluate the overall site-wide water quality.

4.2 Groundwater Flow Conditions

Water levels at 42 Site monitoring wells and 20 multi-port well intervals were gauged on July 18, 2016 and October 10, 2016. The groundwater elevations are summarized in Table 11, and the October 2016 water table map and potentiometric surface maps for the Lower Lone Rock formation and Upper Wonewoc formation are shown on Figures 4 through 6. Overall, the groundwater elevations and the direction of groundwater flow in 2016 are generally consistent with historical observations, which show a general eastern to south-eastern flow. The extraction well GWE-1 has a local influence on flow within the Lower Lone Rock and Upper Wonewoc formations, as shown in Figure 3. The groundwater flow within the Lower Lone Rock and Upper Wonewoc were easterly with influence towards the groundwater extraction well, GWE-1. Groundwater flow at the water table converges toward the site from the north and west, with some potential influence from GWE-1.

4.3 Groundwater Sampling Results

Groundwater samples from the monitoring wells and associated quality control samples were analyzed for VOCs and geochemical field parameters. The results from the groundwater sampling to date are included in Table 12, and the laboratory analytical reports for the July and October 2016 monitoring events are included in Appendix E. Multiple NR 140 preventative

action limit (PAL) and enforcement standard (ES) exceedances for VOCs were reported. Based on the laboratory analytical results for the July and October 2016 monitoring events, groundwater quality within the majority of the monitored wells was generally consistent with historical results. The overall concentration of PCE over time was reviewed for each Site well sampled during the second half of 2016, and a brief description for each area is included in the sub-sections below. Appendix A includes trend plots indicating PCE concentrations over time for each of the Site wells and multi-ports.

Figure 7 displays the PCE results for each well sampled during the October 2016 monitoring event. Isoconcentration maps for PCE were created for the Water Table (Unconsolidated), Lower Lone Rock, and Upper Wonewoc; see Figures 8 through 10, respectively. The contours are based on the data set collected during the October 2016 monitoring event. Historical data was used in conjunction with October 2016 data for interpretation of the isoconcentration map for the Water Table (Unconsolidated), as noted on Figure 8. In addition, MW-25D, which is screened in the Upper Wonewoc formation, was used to approximate the extent of impacts in the Lower Lone Rock formation.

Figure 11 includes two cross-sections (A-A' and B-B') displaying the vertical PCE concentration extents based on the October 2016 groundwater monitoring. Figure 2 shows the location of the wells and the cross-sections.

4.3.1 Water Table (Unconsolidated) Monitoring Results

Monitoring wells MW-1, MW-3S, MW-6S, MW-22S, and MW-23S, which are screened within or just below the unconsolidated unit, were monitored in October 2016. MW-1 and MW-6S are located to the north and south of the Site, respectively. MW-3S, MW-22S, and MW-23S are located within the central to north portion of the Site. During the second half of 2016, multiple NR 140 ES and/or PAL exceedances for VOCs were reported for these wells, as summarized in Table 12. Results indicate that PCE concentrations within the unconsolidated unit are decreasing over time or are comparable to the 2015 data. Concentrations of PCE were reported above the ES for monitoring wells MW-1, MW-3S, MW-22S, and MW-23S, and above the PAL for monitoring well MW-6S.

4.3.2 Lone Rock Formation Monitoring Results

Wells monitored within the Lone Rock formation during the second half of 2016 included MW-2D, MW-3D, MW-3D2, MW-4D2, MW-5S, MW-5D, MW-6D, MW-9D, MW-9D2, MP-13 [port 5 (81-85), port 6 (67-71), and port 7 (44-48)], MW-22D, and MW-23D. All listed wells were sampled in both July and October 2016 with the

exception of MW-5S, MW-9D, and MP-13 (ports 5-7), which were only sampled in October 2016. Though MW-25D is screened in the upper portion of the Wonewoc formation, its October 2016 data was used to approximate the extent of impacts in the Lower Lone Rock formation.

During the second half of 2016, multiple NR 140 PAL and/or ES exceedances for VOCs were reported for these wells, as summarized in Table 12. A brief description of the PCE concentrations over time at these wells is provided in the sub-sections below, with respect to their orientation to the site. The highest PCE concentrations within the Lone Rock formation were reported from MP-13 and MW-5D, for which both well locations and screened intervals are within the capture zone of the groundwater extraction and treatment system.

Northern Offsite Wells

Based on historical and 2016 groundwater monitoring for PCE, MW-9D, screened to the north of the site within the upper portion of the Lone Rock formation, showed a stable to declining trend since 2013. No NR 140 ES or PAL exceedances were reported during the second half of 2016.

PCE concentrations in MW-9D2, also north of the site and screened in the lower portion of the Lone Rock formation, were above the ES. However, MW-9D2 is within the radius of influence from the GETS operation based on the pump test completed for the basis of design. These impacts will be captured by the GETS as they move downgradient.

Northern Onsite Wells/Multi-Ports

MW-3D, MW-3D2, MP-13 (ports 5-7), MW-22D, and MW-23D were monitored during the second half of 2016. These five monitoring points are located within the central to north central portion of the site. MW-3D, MP-13 (port 7), MW-22D, and MW-23D are screened in the upper portion of the Lone Rock formation, and MW-3D2 and MP-13 (ports 5 and 6) are screened in the lower portion of the Lone Rock formation. Multiple NR 140 ES and/or PAL exceedance for select VOCs were reported from these wells during the second half of 2016, as summarized in Table 12.

PCE concentrations were reported above the ES in July and October 2016 in monitoring wells MW-3D2, MW-22D, MW-23D and only during the October event in MW-3D. MW-3D reported a PAL exceedance during the July

monitoring event for PCE. Samples were only collected from MP-13 ports 5-7 during the October event during which PCE concentrations from each port were reported above the ES. Concentrations in MW-3D and MW-3D2 showed a slight increase during the 2016 calendar year but remain significantly lower than historical concentrations. The concentration of PCE has varied in MW-23D over time but was below the historical high during the 2016 calendar year. Though MW-3D, MW-3D2, MW-22D, and MP-13 (ports 5-7) exceed ESs, these wells continue to show lower PCE concentrations compared to historical results, which is expected as groundwater in this area is removed and treated by the GETS.

Eastern Onsite Wells

MW-5S and MW-5D are located along the eastern portion of the site and screened within the upper and lower portions of the Lone Rock formation, respectively. The PCE concentrations at MW-5S showed an overall declining trend since October 2010. The concentrations at MW-5D have varied over time with the highest concentration of PCE seen during the October 2016 monitoring event (3600 µg/L). Both monitoring wells reported PCE at concentrations above the ES during the second half of 2016.

Western Onsite Well

MW-2D is located along the west side of the site and is screened in the upper portion of the Lone Rock formation. During the October 2016 monitoring event, PCE was reported at a concentration above the NR 140 ES. However, historical monitoring results indicate that concentrations of PCE have decreased over time since April 2010.

Southern Onsite Wells

MW-4D2 is screened in the lower portion of the Lone Rock formation and is located along the southwest portion of the site. A PAL exceedance for PCE was reported during the second half of 2016. Low concentrations of PCE have historically been detected, and concentrations observed in October 2016 were consistent with historic results.

MW-6D is screened in the lower portion of the Lone Rock formation and located along the southeast portion of the site. MW-6D showed a slight increase in PCE concentration during the 2016 calendar year, but concentrations observed were still below the historical high of 45 µg/L observed in April 2010.

During the July and October 2016 monitoring events, MW-6D reported a PAL and ES exceedance, respectively, for PCE. However, detections were estimated since the concentrations were reported between the method detection limits and reporting limits.

Southern Offsite Well

MW-25D is located to the south of the site and is screened in the upper portion of the Wonewoc formation, but was used to approximate the extent of PCE impacts in the Lower Lone Rock formation. MW-25D PCE concentrations were reported just above the PAL, which is consistent with historical results.

4.3.3 Wonewoc Formation Monitoring Results

Wells monitored within the Wonewoc Formation during the second half of 2016 included MW-3D3, MW-5D2, MW-5D3, MW-17, MW-25D, MW-25D2, MW-27D, MW-27D2, MP-13 [port 1 (163-167), port 2 (135-139), port 3(121-125), and port 4(102-106)], MP-14 [port 1(170-178), port 2(135-140), port 3(100-105)], MP-15 [port 1(177-187), port 2(142-146), port 3(120-125), port 4(100-105), and port 5(88-92)], and MP-16 [port 1 (175-179), port 2(140-144), and port 3(106-116)]. All listed wells were sampled in October 2016. MW-5D2, MW-5D3, MW-17, MW-25D2, MW-27D, MP-14 (port 2), and MP-16 (port 2) were also sampled in July 2016. During the second half of 2016, multiple NR 140 PAL and/or ES exceedances for VOCs were reported, as summarized in Table 12. A brief description of the PCE concentrations over time at these wells is provided in the subsections below with respect to orientation of the Site. The highest PCE concentrations within the Wonewoc formation were reported in MP-13 and MP-15. However, these wells and screened intervals are in the radius of influence of the GETS based on pump tests completed during the basis of design.

Northern Onsite Well

MP-13 contains four intervals screened in the Wonewoc formation and is located in the northern portion of the Site. Ports 1(163-167) and 2(135-139) are screened in lower portion of the Wonewoc and ports 3(121-125) and 4(102-106) are screened in the upper portion of the Wonewoc formation. During the October 2016 monitoring event, MP-13 ports 1-4 contained ES exceedances for PCE. However, historical results indicated that PCE concentrations in the lower and upper portion of the Wonewoc formation near MP-13 have declined since 2014 and 2015, respectively. MP-13 is in close proximity to the

groundwater extraction system at the Site, which indicates that the treatment system is removing impacted groundwater at MP-13.

Northern Offsite Wells/Multi-Ports

MP-15 (ports 1-5), MW-27D, and MW-27D2, are located to the north of the Site. MP-15 ports 4 and 5 are screened in the upper portion of the Wonewoc formation and MW-27D, MW-27D2, and MP-15 (ports 1-3) are screened in the lower portion of the Wonewoc formation. The concentrations for PCE at each of these wells and/or ports were compared to historical results, and trends were found to vary depending on the location and depth in the formation.

MW-27D indicated a decrease in PCE since 2015, and PAL exceedances were reported during the July and October monitoring events. During the October 2016 event, an ES exceedance at MP-15 port 1 was reported, but overall PCE concentrations have decreased since 2015. During the October event, an ES exceedance at MP-15 port 5 was reported, and this was consistent with results from 2015. During the October monitoring event, ES exceedances were reported from MP-15 ports 2-4 and MW-27D2, and concentrations showed an overall increase in PCE concentrations over time.

Eastern Onsite Well

MW-5D2 is screened in the lower portion of the Wonewoc formation and is located along the eastern portion of the site. During the second half of 2016, ES exceedances were reported for PCE. Overall, PCE concentrations have varied over time depending on the monitoring event.

Eastern Offsite Wells/Multi-Ports

MP-16 is located to the east of the Site and contains three screened intervals within the Wonewoc formation. MP-16 ports 1(175-179) and 2(140-144) are screened in the lower portion of the Wonewoc formation and port 3(106-116) is screened in the upper portion of the Wonewoc formation. The concentrations for PCE at each of these ports were compared to historical results and trends were found to vary depending on the depth in the formation.

In October 2016, MP-16 port 1 reported a PAL exceedance and port 2 reported an ES exceedance for PCE. However, concentrations at these intervals have shown stable results over the past few years. During the October 2016 monitoring event, MP-16 port 3 reported an ES exceedance for PCE. The

concentration of PCE at port 3 has varied over time but has shown a decreasing trend since April 2014.

Western Offsite Wells/Multi-Ports

MP-14 is located to west of the Site and contains three screened intervals within the Wonewoc formation. MP-14 ports 1(170-178) and 2(135-140) are screened in the lower portion of the Wonewoc formation and port 3(100-105) is screened in the upper portion. The concentrations for PCE at each of these intervals were compared to historical results and trends were found to vary depending on the depth in the formation.

MP-14 port 1 showed an ES exceedance for PCE in October 2016, and an increase in concentration over the past few years but remained below the historic high observed in October 2014. MP-14 port 2 concentrations were reported above the ES for PCE in October 2016. Port 2 concentrations have varied overtime but in general have decreased since October of 2013. During the October 2016 monitoring event, PCE was reported at MP-14 port 3 at a concentration just above the PAL. The port 3 PCE concentration has varied and reported low-level detections of PCE over time.

Southern Onsite Well

MW-17 is screened in the upper portion of the Wonewoc formation and an ES exceedance for PCE was reported during the second half of 2016. Overall, PCE concentrations have varied historically at this location.

Southern Offsite Well

MW-25D and MW-25D2 are located to the south of the Site and are screened in the upper portion of the Wonewoc formation. MW-25D PCE concentrations were reported just above the PAL, which is consistent with historical results. Concentrations of PCE in MW-25D2 remain below method detection limits, which is consistent with historical results.

4.3.4 Upper Eau Claire Formation Monitoring Results

MW-3D3 and MW-5D3 are located within the central and eastern portion of the Site, respectively. Both wells are screened in the lower portion of the Wonewoc and upper portion of the Eau Claire formations. The concentrations reported in October 2016 do not exceed the NR 140 PCE ES or PAL, and are consistent with historical results.

Section 5

Site Soil Gas Monitoring

The 2016 annual soil gas monitoring program at the Site was conducted as described in the 2015 Annual Report (Arcadis, 2016).

5.1 Monitoring Network and Sampling Program

Between July 20 and 22, 2016, TRC collected soil gas samples from seven of the site vapor probes. The sampled probes included: VP-1N, VP-1S, VP-2N, VP-6, VP-102, VP-126, and VP-210. In addition, one duplicate sample was collected from VP-126. The locations of the wells are shown on Figure 12.

Soil gas samples were collected from the seven probes over an approximate 30 minute interval using 6-liter laboratory provided Summa® canisters. Each sample was analyzed for tetrachloroethene (PCE), trichloroethene (TCE), cis-1, 2-dichloroethene (cis-1, 2 DCE), trans-1, 2-dichloroethene (trans-1, 2 DCE), and vinyl chloride using Environmental Protection Agency (EPA) Method Toxic Organic (TO)-15. Each sample was collected by TRC and analyzed by Eurofins Air Toxics Inc. of Folsom, California. A summary table of the soil gas analytical results through July 2016 and the laboratory analytical report from the 2016 monitoring are included in Table 13 and Appendix F, respectively.

5.2 Soil Gas Sampling Results

Overall, in comparison to historical data, soil gas monitoring results at the site show:

- The soil gas sampled from the vapor probe cluster VP-1N, -1S, and 2N contained PCE, TCE, and cis-1, 2 DCE concentrations below the Wisconsin residential deep soil gas vapor action level.
- The soil gas sampled at VP-6 contained PCE and TCE at concentrations below the Wisconsin non-residential deep soil gas vapor action level. The vapor monitoring point is compared to the non-residential vapor action level based on its location. In comparison to the July 2015 data, concentrations show an overall decrease. During the 2015 event, PCE, TCE, cis-1,2 DCE, vinyl chloride, and trans-1, 2 DCE were reported above the detection limit where PCE and TCE were the only detections in 2016 and concentrations were less than the 2015 concentrations and below the action level.
- The soil gas sampled at VP-102 contained PCE and TCE at levels which were higher than reported during the 2014 and 2015 monitoring events but were not the highest historical detection. PCE was reported below the Wisconsin residential deep soil gas vapor action

level but TCE was reported above the action level at a concentration of 56 parts per billion by volume (ppbv).

- The soil gas monitored at VP-126 reported no concentrations above the method detection limits which is comparable to the historical data since 2014. A duplicate sample was also collected in series from this vapor monitoring point which was also below the method detection limits.
- The soil gas monitored at VP-210 was comparable to historical data with only low concentrations of PCE detected, which were below the Wisconsin residential deep soil gas vapor action level.

Section 6

Conclusions and Recommendations

6.1 Conclusions

The OM&M activities for the SVE and GETS were completed as required at the Site during this reporting period. Both systems operated continuously throughout this reporting period, with the exception of select repairs and routine maintenance.

Site groundwater monitoring was completed in July and October 2016. As additional monitoring events are completed, further data and concentration verses time analyses will be completed to continue to evaluate the effectiveness of the GETS. As of December 2016, the GETS has been in continuous operation for approximately eighteen months with system troubleshooting being completed during the first six months of operation, and regular operation beginning in approximately January 2016.

Overall groundwater monitoring indicates that the groundwater quality at the Site is consistent with historical results with the exception of select monitoring wells within close proximity to the groundwater extraction well, where concentrations are decreasing. The influence of the GETS operation is already seen in concentrations of PCE at wells adjacent GWE-1 and as shown on Figure 11. Groundwater monitoring will continue and results will be evaluated to determine the effectiveness of the GETS and if there are impacts not being addressed by the remediation system.

6.2 Recommendations

Based on the results of the July through December 2016 OM&M, no immediate actions are required and OM&M is planned to continue in 2017. Work planned for 2017 includes the following:

- GETS operation;
- SVE system operation (at least first half of 2017, see discussion following);
- Compliance monitoring;
- Groundwater monitoring;
- Soil-Gas monitoring;
- Annual inspections of the off-site sub-slab depressurization systems; and
- Semi-annual reporting.

The following Site OM&M items are being reviewed and potential modifications are as described:

- Continue evaluation of the SVE system OM&M. The SVE system has been in permanent continuous operation for over three years. System influent monitoring prior to combining the GETS and SVE vapor treatment indicated that concentrations decreased since the initial start-up of the permanent system (May 2013) through July 2015. Following continued SVE operation through 2016, selective SVE gas monitoring is recommended to evaluate the SVE system effectiveness and performance. Quarterly monitoring of the SVE influent gas from the combined header (pre-treatment) is recommended for the first half of 2017. Samples will be collected in March and July 2017 to continue the evaluation of the system. Following evaluation select modifications and/or operational requirements will be recommended.
- TRC on behalf of MKC will be submitting a letter along with a summary of the monthly system water monitoring that has been completed for the GETS to the WDNR. According to Section 2.5 Monitoring Frequency of the WDNR's General Permit To Discharge Under the Wisconsin Pollutant Discharge Elimination System (WDNR, 2012), the monitoring frequency for required parameters can be adjusted from monthly to quarterly if specific criteria have been met. As of December 2016, sufficient data has been collected and results have indicated that select constituents being monitored could be reduce to a quarterly monitoring frequency. More details will follow in a separate submittal.
- Based on the 2016 soil gas monitoring results, TRC proposes to continue the monitoring as outlined in the 2015 Annual report with the exception of VP-126. TRC recommends removing the monitoring of VP-126 as concentrations have been below detection limits since 2014. If approved, TRC will remove VP-126 from the July 2017 sampling program.
- TRC is re-evaluating the groundwater monitoring program and a new program for the 2017 calendar year will be proposed in a follow up letter prepared on behalf of MKC for submittal to the WDNR. The January 2017 monitoring event will be completed as outlined in the 2015 Annual report. The modified monitoring plan will begin following review and approval from the WDNR. More details will follow in a separate submittal.

Notes:

The total gallons treated and VOCs removed by the GETS prior to January 2016 is further discussed in the *2015 Annual Report* (ARCADIS, April, 2016).
 The GETS was shutdown between January 1 and 14, 2016 for groundwater extraction pump repairs. The system was restarted on January 14, 2016.
 Between January 14, 2016 through June 30, 2016 the GETS periodically shut down for peroxide tank change out, sequestrate drum change out, peroxide dedicated tank installation, and routine maintenance.
 Between July 1, 2016 through December 31, 2016 the GETS was periodically shutdown for transfer pump replacement, meter pump resetting, and routine maintenance.
 -- = Field reading recorded is not consistent with previous collected data and not used for calculations or system issues did not allow a reading to be obtained.
 VOCs = Volatile Organic Compounds
 WDNR = Wisconsin Department of Natural Resources
 WPDES = Wisconsin Pollution Discharge Elimination System
 DMR = Discharge Monitoring Report
 GETS - Groundwater Extraction and Treatment System

Updated By: B. Wachholz 1/24/2017
 Checked By: A. Stehn 1/28/2017

Footnotes:

1. The cumulative groundwater treated through December 31, 2015 was 4,683,600 gallons and cumulative VOCs removed through December 31, 2015 was 61 pounds, as reported in the 2015 Annual Report (ARCADIS, April 2016).
2. The GETS standard operation is 45 gpm. The average discharge flow rate calculations noted take into account system down time and are based on volume of groundwater extracted and time elapsed between monitoring events.
3. Analytical laboratory reports were submitted to the WDNR each month during this reporting period with the WPDES DMR submittal (Permit WI-0046566-6).
4. Compliance sampling is completed on a monthly basis. For weeks where samples were not collected the previously obtained sampling data was used for cumulative VOCs calculations.

Notes:

All concentrations in this table are reported in ppbv unless otherwise noted.
 All samples were analyzed using Method TO-15 and the analytes shown in the table are from the VOC analyte list. Only analytes that were detected in at least one sample are shown in the table. A complete list of constituents analyzed are included in the laboratory analytical reports.
 < = Constituent not detected above noted laboratory method detection limit.
Bold = Constituent detected above laboratory detection limit.
 SVE = Soil vapor extraction
 GETS = Groundwater extraction and treatment system
 ppbv = parts per billion by volume
 VOCs = Volatile Organic Compounds

Updated by: L. Auner 12/27/2016
 Checked by: B. Wachholz 1/6/2017

Notes:

VOCs = Volatile Organic Compounds
 SVE = Soil Vapor Extraction
 GETS = Groundwater extraction and treatment system.
 CFM = cubic feet per minute
 µg/m³ = micrograms per cubic meters
 lb/hr = pounds per hour

Updated by: L. Auner 12/27/2016
 Checked by: B. Wachholz 1/6/2017

Footnotes:

- As of 7/14/2015 the vapors recovered from the SVE system and the GETS operation were combined and are treated through a vapor-phase activated carbon system. An influent and effluent vapor sample is collected each month and analyzed using Method TO-15. The total VOC concentration listed is representative of the effluent sample collected post treatment of the SVE and GETS operations.
- Total VOC concentrations were calculated based on analytes reported above and below the method reporting limit. For detected analytes, the reported concentrations were used. For all other analytes detected below the method reporting limit, half of the reporting limit was used.
- The system flow rate is a combined air flow rate from both the GETS and SVE system and is measured using flow meter FIT-201 which measures total flow from the activated carbon system.
- Emission rates were calculated based on the product of the monthly concentration and monthly system flow rate.
- Average Emission Rate is an average based on samples collected between January 2016 and December 2016.

Average Emission Rate⁽⁵⁾ =			3.0E-04	lb/hr
NR 445 Emission Threshold =			56.1	lb/hr

Notes:

TCE = Trichloroethene
 SVE = Soil Vapor Extraction
 GETS = Groundwater extraction and treatment system.
 CFM = cubic feet per minute
 µg/m³ = micrograms per cubic meters
 lb/hr = pounds per hour

Updated by: L. Auner 12/27/2016

Checked by: B. Wachholz 1/6/2017

Footnotes:

- As of 7/14/2015 the vapors recovered from the SVE system and the GETS operation were combined and are treated through a vapor-phase activated carbon system. An influent and effluent vapor sample is collected each month and analyzed using Method TO-15. The TCE concentration listed is representative of the effluent sample collected post treatment of the SVE and GETS operations.
- The TCE concentration reported in the effluent sample was used for emission calculations. If the concentration was reported below the method reporting limit, half of the reporting limit was used for calculations.
- The system flow rate is a combined air flow rate from both the GETS and SVE system and is measured using flow meter FIT-201 which measures total flow from the activated carbon system.
- Emission rates were calculated based on the product of the monthly concentration and monthly system flow rate.
- Average Emission Rate is an average based on samples collected between January 2016 and December 2016.

Table 9
 Summary of SVE Operations - January 1, 2016 - December 31, 2016
 Madison Kipp Corporation
 201 Waubesa Street
 Madison, Wisconsin

WELL ID	DATE	VACUUM (in H ₂ O)	FLOW RATE (cfm)	VOCs (ppm)
SVE-9	11/28/2016	-	-	-
SVE-9	12/7/2016	-54.4	15.3	0.1
SVE-9	12/16/2016	-54.4	21.7	--
SVE-9	12/21/2016	-61.2	21.5	--

Notes:

System operational data is recorded weekly by MKC or TRC personnel during system operation. VOCs are also monitored using a Photoionization Detector (PID) on a monthly basis. Data recorded prior to January 2016 was previously reported.

Photoionization Detector did not calibrate on April 6, 2016.

NR = No reading recorded during system inspection.

- = data not collected due to operational issues

-- = not monitored

cfm = cubic feet per minute

GETS = Groundwater Extraction System

in H₂O = Inches of water column

ppm = parts per million

SVE = Soil Vapor Extraction

VOCs = Volatile Organic Compounds

Notes:

Data included in this table was collected on July 18, 2016 and October 10, 2016. Historical groundwater elevations were provided in previous reports and are not included here.

amsl = above mean sea level

bls = below land surface

btoc = below top of casing

NM = Not Measured

Prepared by: P. Popp 1/16/2017

Table 12
Groundwater Analytical Results Summary
Madison-Kipp Corporation
Madison, Wisconsin

Footnotes:

- 1 - Indicates that the sample was quenched prior to analysis.
- 2 - Indicates that the sample was not quenched prior to analysis.
- 3 - Indicates the result of a field duplicate.

Updated By: Sue Milcan 11/10/2016
Checked By: Peggy Popp 11/15/2016

General Notes:

All concentrations noted in this table are reported in micrograms per liter ($\mu\text{g/L}$) unless otherwise noted.

Analytes shown in the table are from VOC and PCB analyte lists. Only analytes that were detected in at least one sample are shown in the table. A complete list of constituents analyzed are included in the laboratory analytical reports.

100 = NR 140 Wis. Adm. Code Preventive Action Limit Exceedance

100 = NR 140 Wis. Adm. Code Enforcement Standard Exceedance

< = Constituent not detected above noted laboratory method detection limit.

* = Data is suspect and not used in evaluation. (Note from historical data through 2015, provided by Arcadis)

B = Compound was found in the blank and sample.

bgs = Below Ground Surface.

cn = Laboratory Contaminant.

E = Estimated concentration, exceeds instrumental calibration range.

ID = Identification.

J = Estimated concentration above the adjusted method detection limit and below the reporting limit.

NA = Not Analyzed.

ND = Not Detected.

NE = Not Established.

PCBs = Polychlorinated biphenyls.

VOCs = Volatile Organic Compounds.

Trend Plot A.3
GETS and SVE Combined Gas Influent Sampling Results - Total VOCs
Madison Kipp Corporation
201 Waubesa Street
Madison, Wisconsin

Notes:

SVE = Soil Vapor Extraction
GETS = Groundwater Extraction and Treatment System
µg/m³ = micrograms per cubic meter
VOCs = Volatile Organic Compounds

The graph represents the influent samples collected from the combined SVE and GETS between January 2016 and December 2016.

Total VOCs were calculated based on analytes reported above and below the method reporting limits. For detected analytes, the reported concentrations were used. For all other analytes detected below the method reporting limit, half of the reporting limit was used.

Appendix B Remediation Site Operation, Maintenance, Monitoring, and Optimization Report Form 4400-194

GENERAL INSTRUCTIONS, PURPOSE AND APPLICABILITY OF THIS FORM: Completion of this form is required under s. NR 724.13(3), Wis. Adm. Code. A narrative report or letter containing the equivalent information required in this form may be submitted in lieu of the actual form. Failure to submit this form as required is a violation of s. NR 724.13(3), Wis. Adm. Code, and is subject to the penalties in s. 292.99, Wis. Stats. This form must be submitted every six months for soil or groundwater remediation projects that report operation and maintenance progress in accordance with s. NR 724.13(3), Wis. Adm. Code.

Note: Long-term monitoring results submitted in accordance with s. NR 724.17(3), Wis. Adm. Code are required to be submitted within 10 business days of receiving sampling results and are not required to be submitted using this form. However, portions of this form require monitoring data summary information that may be based on information previously submitted in accordance with s. NR 724.17(3), Wis. Adm. Code.

Note: Responsible parties should check with the State Project Manager assigned to the site to determine if this form is required to be submitted at sites responded to under the Federal Comprehensive Environmental Response and Compensation Act (commonly known as Superfund) or an equivalent State lead Superfund response.

Note: Responsible parties should check with the State Project Manager assigned to the site to determine if any of the information required in this form may be omitted or changed and obtain prior written approval for any omissions or changes.

Submittal of this form is not a substitute for reporting required by Department programs such as Waste Water or Air Management. Personally identifiable information on this form is not intended to be used for any other purpose than tracking progress of the remediation by the Bureau for Remediation and Redevelopment.

Personal information collected will be used for administrative purposes and may be provided to requesters to the extent required by Wisconsin's Open Records Law (ss. 19.31-19.39, Wis. Stats.). Unless otherwise noted, all citations refer to Wisconsin Administrative Code.

Note: There is a separate semi-annual report required under s. NR 700.11(1), Wis. Adm. Code. Reporting under that provision is through an internet-based form:

<http://dnr.wi.gov/topic/Brownfields/documents/regs/NR700progreport.pdf>

Section GI - General Site Information

A. General Information

1. Site name

Madison-Kipp Corporation

2. Reporting period from: 07/01/2016 To: 12/31/2016 Days in period: 184

3. Regulatory agency (enter DNR, DATCP and/or other) 4. BRRTS ID No. (2 digit program-2 digit county-6 digit site specific)
 DNR 02-13-558625

5. Site location

Region	County	Address					
South Central Region	Dane	201 Waubesa Street

Days in period: 184

Remediation Site Operation, Maintenance, Monitoring & Optimization Report

Form 4400-194 (R 11/14)

Page 2 of 28

B. Remediation Method

Only submit sections that apply to an individual site. Check all that apply:

- Groundwater extraction (submit a completed Section GW-1).
- Free product recovery (submit a completed Section GW-1).
- In situ air sparging (submit a completed Section GW-2).
- Groundwater natural attenuation (submit a completed Section GW-3).
- Other groundwater remediation method (submit a completed Section GW-4).
- Soil venting (including soil vapor extraction building venting and bioventing submit a completed Section IS-1).
- Soil natural attenuation (submit a completed Section IS-2).
- Other in situ soil remediation method (submit a completed Section IS-3).
- Biopiles (submit a completed Section ES-1).
- Landspreading/thinspreading of petroleum contaminated soil (submit a completed Section ES-2).
- Other ex situ remediation method (submit a completed Section ES-3).
- Site is a landfill (submit a completed Section LF-1).

C. General Effectiveness Evaluation for All Active Systems

If the remediation is active (not natural attenuation), complete this subsection.

1. Is the system operating at design rates and specifications? Yes No

If the answer is no, explain whether or not modifications are necessary to achieve the goal that was previously established in design.

2. Are modifications to the system warranted to improve effectiveness Yes No

If yes, explain:

3. Is natural attenuation an effective low cost option at this time? Yes No

4. Is closure sampling warranted at this time? Yes No

5. Are there any modifications that can be made to the remediation to improve cost effectiveness? Yes No

If yes, explain:

D. Economic and Cost Data to Date

1. Total investigation cost: _____

2. Implementation costs (design, capital and installation costs, excluding investigation costs): _____

3. Total costs during the previous reporting period: _____

4. Total costs during this reporting period: _____

5. Total anticipated costs for the next reporting period: _____

6. Are any unusual or one-time costs listed in the reporting periods covered by D.3., D.4. or D.5. above? Yes No

If yes, explain:

7. If closure is anticipated within 12 months, estimated costs for project closeout: _____

Site name: Madison-Kipp Corporation

Reporting period from: 07/01/2016 To: 12/31/2016

Days in period: 184

Remediation Site Operation, Maintenance, Monitoring & Optimization Report

Form 4400-194 (R 11/14)

E. Name(s), Signature(s) and Date of Person(s) Submitting Form

Legibly print name, date and sign. Only persons qualified to submit reports under ch. NR 712 Wis. Adm. Code are to sign this form for sites with any ongoing active remediation, monitoring or an investigation. Other persons may sign this form for sites with no response activities during the six month reporting period.

Registered Professional Engineers:

I hereby certify that I am a registered professional engineer in the State of Wisconsin, registered in accordance with the requirements of ch. A-E 4, Wis. Adm. Code; that this document has been prepared in accordance with the rules of Professional Conduct in ch. A-E 8, Wis. Adm. Code; and that, to the best of my knowledge, all information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR 700 to 726, Wis. Adm. Code.

Print name Katherine Vater	Title Project Manager
Signature 	Date March 6, 2017

Hydrogeologists:

I hereby certify that I am a hydrogeologist as that term is defined in s. NR 712.03(1), Wis. Adm. Code, and that, to the best of my knowledge, all information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR 700 to 726, Wis. Adm. Code.

Days in period: 184

Remediation Site Operation, Maintenance, Monitoring & Optimization Report

Form 4400-194 (R 11/14)

Page 4 of 28

Section GW-1, Groundwater Pump and Treat Systems and Free Product Recovery Systems

A. Groundwater Extraction System Operation:

1. Total number of groundwater extraction wells or trenches available: 1 and the number in use during period: 1

2. Number of days of operation (only list the number of days the system actually operated, if unknown explain):
170 days

3. System utilization in percent (days of operation divided by reporting time period multiplied by 100). If < 80%, explain:
93%

4. Quantity of groundwater extracted during this time period: 11,107,127 gallons

5. Average groundwater extraction rate: 45 gpm

6. Quantity of dissolved phase contaminants removed during this time period in pounds: 131 lbs

B. Free Product Recovery System Operation

1. Is free product (nonaqueous phase liquid) being recovered at this site? Yes No

If yes, explain:

2. Quantity of free product extracted during this time period (enter none if none): _____ gallons

3. Average free product extraction rate: _____ gpm

C. System Effectiveness Evaluation

1. Is a contaminated groundwater plume fully contained in the capture zone? Yes No

If no, explain:

The groundwater extraction and treatment system was designed to facilitate the removal of volatile organic compound (VOC) mass in addition to providing hydraulic containment of VOCs in groundwater in order to minimize off-site VOC migration.

2. If free product is present, is the free product fully contained in capture zone? Yes No

If no, explain:

3. If free product is present in any wells at the site, but free product was not recovered during reporting period, explain:

4. If free product is not present, determine the single contaminant that requires the greatest percent reduction to achieve ch. NR 140 ES and PAL. Perform this calculation for all contaminants that were present at the site that have ch. NR 140 standards. Use the highest contaminant concentration measured in any sampling points during reporting period. If free product is present, write "FREE PRODUCT" in C.4.a.

a. Contaminant: Tetrachloroethene

b. Percent reduction necessary to reach ch. NR 140 ES and PAL: 99 %

c. Maximum contaminant concentration level in any monitoring well of that contaminant: 4,800 µg/L

d. Maximum contaminant concentration level in any extraction well of that contaminant: 1,700 µg/L

Site name: Madison-Kipp Corporation

Reporting period from: 07/01/2016 To: 12/31/2016

Days in period: 184

Remediation Site Operation, Maintenance, Monitoring & Optimization Report

Form 4400-194 (R 11/14)

Page 5 of 28

- e. If the maximum concentration in a monitoring well is more that one order of magnitude above the concentration measured in an extraction well, explain why the extracted groundwater contamination levels are significantly less than the levels at other locations within the aquifer.

Not Applicable

D. Additional Attachments

Attach the following to this form:

- Most recent report to the DNR Wastewater Program, if applicable. [Appendix C](#)
- Groundwater contour map with capture zone indicated. [Figures 3-6](#)
- Groundwater contaminant distribution map (may be combined with contour map). [Figures 7-10](#)
- Graph of cumulative contaminant removal, if both free product recovery and ground water extraction are used, provide separate graphs.
- Time versus groundwater contaminant concentration graphs for the contaminant listed in C.4.a. (above), as follows:
 - Graph of contaminant concentrations versus time for each extraction well in use during the period. [Appendix A;Graph A.2](#)
 - Graph of contaminant concentrations versus time for the monitoring well with the greatest level of contamination. [Appendix A;Graph A.47](#)
- Groundwater contaminant chemistry table. [Table 12](#)
- Groundwater elevations table. [Table 11](#)
- System operational data table. [Table 1](#)

Section GW-2, In Situ Air Sparging Systems

A. In Situ Air Sparging System Operation

1. Number of air injection wells at the site and the number actually in use during the period: _____
2. Number of days of operation (only list the number of days the system actually operated, if unknown explain): _____
3. System utilization in percent (days of operation divided by reporting time period multiplied by 100). If < 80%, explain: _____

B. System Effectiveness Evaluation

1. If free product is not present, determine the single contaminant that requires the greatest percent reduction to achieve ch. NR 140 ES and PAL. Perform this calculation for all contaminants that were present at the site that have ch. NR 140 standards. Use the highest contaminant concentration measured in any sampling points during reporting period. If free product is present, write "FREE PRODUCT" in B.1.a.
 - a. Contaminant: _____
 - b. Percent reduction necessary to reach ch. NR 140 ES and PAL: _____ %
 - c. Maximum contaminant concentration level in any monitoring well: _____ µg/L
2. Is there any evidence that air is short circuiting through natural or man-made pathways? Yes No
If yes, explain: _____
3. Is the size of the plume: Increasing Stabalized Decreasing ?
If increasing, explain: _____

C. Additional Attachments

Attach the following to this form:

- Groundwater contour map.
- Groundwater contaminant distribution map (may be combined with contour map).
- When contaminants are aerobically biodegradable, attach a dissolved oxygen in groundwater map (dissolved oxygen may be combined with the contaminant data on a single map).
- Site map with all air injection wells and groundwater monitoring points.
- Graph of contaminant concentrations versus time for the contaminant listed in B.1.a. (above) for the monitoring point with the greatest level of contamination.
- Groundwater contaminant chemistry table.
- Groundwater elevations table.
- System operational data table.

Section GW-3, Natural Attenuation (Passive Bioremediation) in Groundwater

A. Effectiveness Evaluation

1. If free product is not present, determine the single contaminant that requires the greatest percent reduction to achieve ch. NR 140 ES and PAL. Perform this calculation for all contaminants that were present at the site that have ch. NR 140 standards. Use the highest contaminant concentration measured in any sampling points during reporting period. If free product is present, write "FREE PRODUCT" in A.1.a

a. Contaminant: _____

b. Percent reduction necessary to reach ch. NR 140 ES and PAL: _____ %

c. Maximum contaminant concentration level in any monitoring well of that contaminant: _____ $\mu\text{g/L}$

2. Aquifer parameters:

a. Hydraulic conductivity: _____ cm/sec

b. Groundwater average linear velocity: _____ ft/yr

3. Is there a downgradient monitoring well that meets ch. NR 140 standards? Yes No

4. Based on water chemistry results, is the plume: Expanding Stabalized Contracting ?

5. If the answer in 4. (above) is "expanding," is natural attenuation still the best option? Yes No

If yes, explain:

6. Biodegradation parameters:

a. Upgradient (or other site specific background) DO level: _____ $\mu\text{g/L}$

b. DO levels in the part of the plume that is most heavily contaminated _____ $\mu\text{g/L}$

7. Is site closure a viable option within 12 months from the date of this form? Yes No

8. Are there any modifications that can improve cost effectiveness? Yes No

If yes, explain:

9. Have groundwater table fluctuations changed the contaminant level trends over time? Yes No

If yes, explain:

10. Has the direction of groundwater flow changed during the reporting period? Yes No

If yes, approximate change in degrees: _____

B. Additional Attachments

Attach the following:

- Groundwater contour map.
- Groundwater contaminant distribution map (may be combined with contour map).
- When contaminants are aerobically biodegradable, attach a dissolved oxygen in groundwater map (dissolved oxygen may be combined with the contaminant data on a single map).
- Graph of contaminant concentrations versus time for the contaminant listed in A.1.a. (above) for the monitoring point with the greatest level of contamination.

Note: This is the minimum required graph; however, it is recommended that multiple time versus contamination concentration graphs as described in the instructions on page 24 for Natural Attenuation of Groundwater be submitted.

- Graph of contaminant concentrations versus distance.
- Groundwater contaminant chemistry table.
- Groundwater biological parameters.
- Groundwater elevations table.

Section GW-4, Other Groundwater Remediation Methods

A. Effectiveness Evaluation

1. If free product is not present, determine the single contaminant that requires the greatest percent reduction to achieve ch. NR 140 ES and PAL. Perform this calculation for all contaminants that were present at the site that have ch. NR 140 standards. Use the highest contaminant concentration measured in any sampling points during reporting period. If free product is present, write "FREE PRODUCT" in A.1.a.

a. Contaminant: _____

b. Percent reduction necessary: _____ %

c. Maximum contaminant concentration level in any monitoring well: _____ µg/L

2. Is the size of the plume: Increasing Stabalized Decreasing ?

3. Describe the method used to remediate groundwater at the site:

4. List any additional information required by the DNR for this method for this site:

B. Additional Attachments

Attach the following:

- Groundwater contour map.
- Groundwater contaminant distribution map (may be combined with contour map).
- When contaminants are aerobically biodegradable, attach a dissolved oxygen in groundwater map (dissolved oxygen may be combined with the contaminant data on a single map).
- Graph of contaminant concentrations versus time for the contaminant listed in A.1.a. (above) for the monitoring point with the greatest level of contamination.
- Groundwater contaminant chemistry table.
- Groundwater elevations table.
- Any other attachments required by the DNR for this remediation method.

Page 9 of 28

Section IS-1, Soil Venting (Including Soil Vapor Extraction, Building Venting and Bioventing)

A. Soil Venting Operation

Note: This form is not required for building vapor mitigation systems that are installed proactively to protect building occupants/users and are not considered part of ongoing active soil remediation.

1. Number of air extraction wells available and number of wells actually in use during the period: _____ 9

2. Number of days of operation (only list the number of days the system actually operated, if unknown explain):
169 days

3. System utilization in percent (days of operation divided by reporting time period multiplied by 100). If < 80%, explain:
92%

4. Average depth to groundwater: 21.36 gpm

B. Building Basement/Subslab Venting System Operation

1. Number of venting points available and number of points actually in use during the period: _____

2. Number of days of operation (only list the number of days the system actually operated, if unknown explain):

3. System utilization in percent (days of operation divided by reporting time period multiplied by 100). If < 80%, explain:

C. Effectiveness Evaluation

1. Average contaminant removal rate for the entire system: _____ pounds per day

2. Average contaminant removal rate per well or venting point: _____ pounds per day

3. If the average contaminant removal rate is less than one pound per day for the entire system, or if the average contaminant removal rate per well is less than one tenth of a pound per day, evaluate the following:

- a. If contaminants are aerobically biodegradable and confirmation borings have not been drilled in _____
- i. Oxygen levels in extracted air: _____ percent
- ii. Methane levels in extracted air (ppm_v) If over 10 ppm_v, explain: _____

Please note that removal rates could not be calculated for the SVE system alone based on combined GETS and SVE vapor samples being collected. Total removal of VOCs from the SVE and GETS equated to 131 lbs of VOCs during this reporting period.

iii. If methane is not present above 10 ppm_v and if oxygen is greater than 20 percent in extracted air, you should either:

- o Drill confirmation borings during the next reporting period, if the entire site should be considered for closure.
- o Or, perform an in situ respirometry test in a zone of high contamination. Do not perform the test in an air extraction well, use a gas probe or water table well. If a zero order rate of decay based on oxygen depletion is less than 2 mg/kg per day, then you should drill confirmation borings, if the entire site should be considered for closure. If the rate of decay is between 2 and 10 mg/kg, operate for one more reporting period before evaluating further. If the zero order rate of decay is greater than 10 mg/kg total hydrocarbons, continue operating the system in a manner than maximizes aerobic biodegradation.

b. If contaminants are not aerobically biodegradable and confirmation borings have not been recently drilled during the past year, you should drill confirmation borings during the next reporting period if the entire site should be considered for closure.

c. If soil borings were drilled during the past year and soil contamination remains above acceptable levels, explain if the system effectiveness can be increased and/or if other options need to be considered to achieve cleanup criteria.

D. Additional Attachments

Attach the following to this form:

- Well and soil sample location map indicating all air extraction wells. If forced air injection wells are also in use, identify those wells. Figure 10
- If water table monitoring wells are present at the site, a map of well locations. Figure 2 and 4
- Time versus vapor phase contaminant concentration graph. Appendix A - Graph A.3 depicts concentration versus time for the combined GETS and SVE vapor.
- Time versus cumulative contaminant removal graph. Not Applicable. SVE and GETS vapor is combined and sampled.
- Groundwater elevations table, if water table wells are present at the site; also list screen lengths and elevations. Table 11
- Table of soil contaminant chemistry data. N/A
- Soil gas data, if gas probes are used to monitor subsurface conditions in locations other than where air is extracted. Table 13
- System operational data table. Table 9

Form 4400-194 (R 11/14)

Page 10 of 28

Section IS-2, Natural Attenuation (Passive Bioremediation) in Soil

A. Effectiveness Evaluation

1. Soil gas information in the soil that is most contaminated from a permanently installed gas probe(s) or water table monitoring well(s).

a. Hydrocarbon levels: _____ ppm, with an FID

b. Oxygen levels: _____ percent

c. Carbon dioxide levels(specify ppm or percent): _____

d. Methane levels: _____ ppm

2. Soil gas information in background (uncontaminated soil) from permanently installed gas probe(s) or water table monitoring well(s):

a. Hydrocarbon levels: _____ ppm, with an FID

b. Oxygen levels: _____ percent

c. Carbon dioxide levels(specify ppm or percent): _____

d. Methane levels: _____ ppm

3. List the results of the single boring that had the highest levels of soil contamination during the last round of soil sampling, and the date those samples were collected. Since soil borings are only drilled periodically, list the most recent data even if the data is prior to this reporting period. Since this data is used to assess progress based on the most recent soil sampling event, do not list data from prior sampling events.

a. Total hydrocarbons (Specify if GRO and/or DRO): _____ $\mu\text{g}/\text{kg}$

b. Specific compounds ($\mu\text{g}/\text{kg}$):

i. Benzene: _____ $\mu\text{g}/\text{kg}$

ii. 1,2 Dichloroethane: _____ $\mu\text{g}/\text{kg}$

iii. Ethylbenzene: _____ $\mu\text{g}/\text{kg}$

iv. Toluene: _____ $\mu\text{g}/\text{kg}$

v. Total xylenes: _____ $\mu\text{g}/\text{kg}$

4. Is there any evidence that contaminants are leaching into groundwater? Yes No

If the answer is yes and if groundwater quality is not being monitored, explain:

5. Is site closure a viable option within 12 months from the date of this form? Yes No

6. Are there any modifications that can be made to the remediation to improve cost effectiveness? Yes No

If yes, explain:

B. Additional Attachments

Attach the following to this form:

- Well and soil sample location map.
- Cross sections showing the water table, soil sampling locations, screened intervals for gas probes or water table wells, geologic contacts, and any former excavation boundaries.
- Graphs of contaminant concentrations, oxygen, carbon dioxide and methane levels over time.
- Groundwater elevations table, if water table wells are present at the site.
- Table of soil contaminant chemistry.
- Table of soil gas readings.

Section ES-1, Ex Situ Soil Treatment Using Biopiles

A. Effectiveness Evaluation

1. Volume of soil in the biopile (if multiple biopiles, list number of piles and total volume):

2. Monitoring used to assess progress and verify optimal conditions for biodegradation.

a. Vapor phase measurements of gases (average of all readings from most recent sampling event):

i. VOCs by FID: _____ ppm

ii. Oxygen: _____ percent

iii. Carbon dioxide: _____ percent

iv. Methane: _____ ppm

b. Soil temperature: _____ °F

c. Soil moisture sensors, if used: _____ percent

3. Treatment amendments added to the soil during construction:

a. Artificial nutrients, excluding manure.

i. Types and total pounds added:

ii. Nitrogen and phosphorous content of the added amendment: _____ percent

b. Manure: _____ total pounds

c. Natural organic materials (straw, wood chips, etc.)(type and total pounds):

4. Forced air biopiles only answer the following:

a. Total air flow rate of the ventilation system: _____ scfm

b. Average contaminant removal rate: _____ pounds per day

c. Average biodegradation rate based on oxygen utilization: _____ pounds per day

5. If soil samples have been taken to monitor progress, list results. Only list the most recent results. If none collected enter NA.

a. Total hydrocarbons. Specify if GRO and/or DRO: _____ µg/kg

b. Specific compounds (µg/kg):

i. Benzene: _____ µg/kg

ii. 1,2 Dichloroethane: _____ µg/kg

iii. Ethylbenzene: _____ µg/kg

iv. Toluene: _____ µg/kg

v. Total xylenes: _____ µg/kg

B. Additional Attachments

Page 13 of 28

Section ES-2, Ex Situ Soil Treatment Using Landspreading/Thinspreading

A. Effectiveness Evaluation

1. Method used: landspreading thinspreading

Note: For purposes of this form, "landspreading" is the placement of contaminated soil on native topsoil, incorporation of that soil into the native soil and planting crops or other plants on it. The term "thinspreading" refers to placing contaminated soil on an impervious base for aeration.

2. Was any progress monitoring using field screening on soil conducted during this reporting period? Yes No

3. If the answer to A.2. (above) is yes:

i. List monitoring method:

ii. List monitoring results:

4. Is there any evidence of soil erosion at the landspreading/thinspreading location? Yes No

5. Spreading thickness: _____ inches

6. Type of crop planted (if thinspreading with no crop planted, so state):

7. Confirmation sampling date: _____ Anticipated confirmation sampling date: _____

8. Most recent soil sample results, if soil samples for laboratory analysis have been collected to monitor progress. Only list the highest result of the most recent sampling round. If no samples have been collected, enter NA.

a. Total hydrocarbons. Specify if GRO and/or DRO: _____ $\mu\text{g}/\text{kg}$

b. Specific compounds ($\mu\text{g}/\text{kg}$):

i. Benzene: _____ $\mu\text{g}/\text{kg}$

ii. 1,2 Dichloroethane: _____ $\mu\text{g}/\text{kg}$

iii. Ethylbenzene: _____ $\mu\text{g}/\text{kg}$

iv. Toluene: _____ $\mu\text{g}/\text{kg}$

v. Total xylenes: _____ $\mu\text{g}/\text{kg}$

B. Additional Attachments

Attach the following to this form:

- Map of the landspreading/thinspreading area. If soil samples have been collected, specify locations of samples and dates of sampling.
- Table of soil contaminant chemistry data.
- Table of any field screening results with dates of sample collection.

Page 14 of 28

Section ES-3, Landfills

Note: Reporting forms or reporting requirements in a Department approved Operation and Maintenance Plan for a landfill may take the place of this form.

Specific Inspection Items	Potential Problem Areas	Status	Notes
Perimeter Security Fencing	Broken or missing wood slats, torn chain link fabric, barbed wire, other - list		
Entrance Gate and Locking Mechanism	Lock broken/missing, mechanism inoperative.		
Monitoring Wells and Wellhead Covers	Signs of tampering, casing damaged, lock missing.		
Final Cover Vegetation	Bare spots, stressed vegetation, deep rooted vegetation.		
Final Cover Slope (explain below)	Gullies, lack of vegetation, subsidence, ponding.		
Evidence of Burrowing Animals	Damage to final cover, evidence of waste.		
Stormwater Drainage Channels	Gullies, erosion, debris, culvert blocked.		
Passive Landfill Gas Venting System	Damaged or blocked vent risers, stressed vegetation.		
Active Landfill Gas Extraction System	Damaged or blocked piping, cleanouts, other blower flare, knockouts, etc.		
Leachate Collection System	Pumps, connection piping, collection system piping, extraction wells, collection tanks, tanker truck loading system or sanitary sewer discharge piping.		
Access Road Cover Mowing; Tall Vegetation Removal	Ponding, rutting, erosion, cracked or damaged pavement. Mowing and tall vegetation removal done to specified vegetation.		

Summary of Deficiencies and/or Corrective Actions:

Remediation Site Operation, Maintenance, Monitoring & Optimization Report

Form 4400-194 (R 11/14)

Page 15 of 28

B. Additional Attachments

Attach the following to this form:

- Any photographs documenting problems and maintenance activities.
- Maps, drawings showing site features requiring maintenance.
- Records for leachate pumping/discharge/hauling.
- Records for active gas extraction volumes.

Section INS- 1, Section by Section Instructions and Information

Specific Section by Section Instructions for This Form. The site name and reporting period is listed on every page. Then if the pages are inadvertently separated, that information can be used to determine which pages form the report.

General Site Information

- A.1. List the name as it appears on the DNR tracking system. If the person filling out the form does not know what the name on the tracking system is, use the name that the DNR used in the most recent correspondence.
- A.2. The reporting period should be either from January 1 to June 30 or July 1 to December 31 for active systems. For passive systems, use a calendar year basis. If however the report covers a newly installed system, list the actual startup date instead of January 1 or July 1. For new passive systems, use the first date that monitoring data is available as the date of startup.
- A.3. Enter all regulatory agencies that regulate the site.
- A.4. This form is a DNR form. For that reason, list the DNR site number. If there are other agencies regulating the site, listing identification numbers for other agencies is also recommended, but not mandatory, unless specified by those other agencies.
- A.5. If the information listed for the site location is not sufficient information for a person to use to drive to a site (example: no street address in a rural area), also include a map that is sufficient for a person to use to drive to the site. A U.S. G.S. topographic map that shows the site location may be used.
- A.8. List the contaminants that have at one time exceeded the PALs or Table Values in ch. NR 720. If GRO and/or DRO exceed the ch. NR 720 standards, also list GRO and/or DRO. Do not list other contaminants that have never exceeded state standards at the site. If more room is necessary, write "SEE ATTACHED SHEETS" and list all contaminants on a separate sheet.
- A.9. List the predominant soil types that are contaminated. If there is both contaminated soil and groundwater at the site, list soil types both above and below the water table. If only some soil is contaminated, do not list the soil types that are uncontaminated. If the site soils meet soil cleanup criteria, but groundwater is contaminated, so state that. Specify if the USCS or USDA system is used for soil descriptions. This line specifies soil because the vast majority of contaminated sites do not have contaminated bedrock. If bedrock is contaminated, also list that bedrock type.
- A.10. If the groundwater meets ch. NR 140 standards, enter "NA - NO NR 140 EXCEEDANCES". Otherwise, list the estimated hydraulic conductivity and the method used to estimate it (bail-down tests, calculations based on grain size, pumping test, etc.) If the hydraulic conductivity has not been determined, state when the tests are to be conducted. When a number of test results are available, list the range of results and the geometric mean. If however some results have a low level of accuracy and some results have a high level of accuracy, you should only list the most accurate results. See the Section on aquifer testing in the *Guidance on Design, Installation and Operation of Ground Water Extraction and Product Recovery Systems* for more information.
- A.11. If the groundwater meets ch. NR 140 standards, enter "NA - NO NR 140 EXCEEDANCES". Otherwise, enter groundwater average linear velocity as a function of hydraulic conductivity, effective porosity and the groundwater gradient. You should use the geometric mean from A.11. (above) and the most representative value for the gradient at the site. Estimate the effective porosity based on soil types and geologic origin of the soil. If there are reasons to believe that the average liner velocity estimate is less than the actual rate at the site, so state that reason. Secondary porosity effects, flow through submerged utility trenches, widespread contaminant distribution in low permeability soils, etc., are reasons to assume that the actual migration rate is much greater than the predicted average linear velocity. In such cases, you should explain the reasoning for doubting the predicted average linear velocity.
- A.12. If the information listed for the soil treatment location is not sufficient information for a person to use to drive to a site, also include a map that is sufficient for a person to use to drive to the site. A U.S.G.S. topographic map or a plat map that shows the site location may be used.

- B. Check all methods used at a site. For example, if groundwater extraction, free product recovery and soil venting are used, check all three methods and submit the additional pages for those methods. If dual-phase or bioslurping are used, these methods extract both air and groundwater, check boxes for and attach additional pages for both soil venting and pump and treat.
- C. Remediation systems that use any form of enhancement are considered "active" and sites where there are no enhancements of any kind are considered "passive" forms of remediation. For purposes of these forms, natural attenuation (also called naturally occurring bioremediation) is "passive" and all other remediation methods are "active" methods.
- C.1. Design flow rates refers to flow rates such as gallons per minute extracted by a ground water extraction system, standard cubic feet per minute extracted by a soil venting system, standard cubic feet per minute injected by an in situ air sparging system, etc. If the actual flow rate is within 80 percent of the rate predicted in the design, consider that as meeting the design specification.
- D. The cost data in this section is used by DNR staff to evaluate whether or not the selected remedy is the most cost effective remedy and whether or not system modifications may be warranted to improve efficiency and/or cost effectiveness. Responsible parties and consultants are encouraged to submit cost information so that DNR staff may assist responsible parties and consultants accomplish environmental cleanups in the most cost effective manner.

Total costs for past costs are all costs to date. This information is for all costs that were incurred to investigate and/or remediate the site. These costs include but are not limited to: consulting labor and supplies, laboratory testing, transportation, equipment, etc. If the consultant does not pass all costs through the consulting firm, the consultant will need to contact their client for other non-consulting costs to determine total costs. Exceptions include costs for attorney fees, accounting, claim assistance in preparing claims to state reimbursement funds, or other indirect expenses that are not essential to remediating the site.

- D.2. The initial implementation costs are all costs that are incurred to start implementing a remedy at a site. Costs for the investigation however are excluded because those costs are incurred prior to remedy selection. Since costs for treatability and/or pilot testing are used to procure data for remedial design and are specific to different remediation methods, these costs should be included in implementation costs and not investigation costs. Startup or shakedown costs are also considered implementation costs and should not be considered operation and maintenance costs.
- D.3. Costs for implementation or investigation should not be repeated here or they will be double counted.
- D.4. Costs for implementation or investigation should not be repeated here or they will be double counted.
- D.5. Costs for implementation or investigation should not be repeated here or they will be double counted.
- D.6. Examples of one-time or unusual costs include the following:
 - o Replacing a burned out motor on a pump.
 - o Replacement of a well that was destroyed by a snowplow.
 - o Confirmation sampling to determine if the site meets closeout criteria. This type of cost is considered an unusual cost because this type of sampling is not conducted during most reporting periods.
- D.7. This estimate of costs is for all costs to close out a site minus the salvage value of any remediation equipment. Pertinent costs include items such as well abandonment, equipment removal from the site, consulting costs associated with these items, etc. Do not include any costs that will not be paid by a state reimbursement fund, such as repaving.

Section GW-1, Groundwater Extraction and Product Recovery

- A.1. List two numbers, the total number of extraction wells at the site and the number that were in actual use during the period. If all wells were in use, state that on the form.
- A.2. The number of days of operation are the number of days that the system was actually operated. If the system was shut down for reasons such as: repairs were necessary, piping froze, shut down to provide time for subsurface conditions to equilibrate before sampling, etc., do not list those days as being in operation.
- A.3. System utilization is a measure of the amount of time that the system operated relative to the amount of time that it could have operated.
- A.5. The average is for the entire site, not per well or trench. For purposes of determining the average ground water extraction rate, calculate the average based on the total volume of groundwater extracted divided by the time of the reporting period. For example, if the system operated at 10 gallons per minute for one month, the amount of water extracted would be approximately 432,000 gallons. If the reporting period was six months long, then the time period is approximately 260,000 minutes. Therefore, the average flow rate over six months is 432,000 divided by 260,000 minutes for an average flow rate of 1.67 gallons per minute (gpm).
- A.6. Calculate the total dissolved contaminants removed in pounds. If the estimate is a sum of BTEX and not based on a total hydrocarbon test (GRO and/or DRO), so state that on the form.
- B.3. The average should be based on the entire site over the entire reporting period. See instructions above for A.5. List the free product recovery rate as gallons per day (gpd), not gallons per minute (gpm).
- C.1. To answer this question, a thorough evaluation of water levels and chemical analyses in all monitoring points at the site is necessary.
- C.2. If the capture zone has not been determined mathematically, it will need to be determined to answer this question. See the *Guidance on Design, Installation and Operation of Ground Water Extraction and Product Recovery Systems* for and any recent update or errata sheets for more information on plume capture.
- C.4. When free product is present, line C.4.a. should state "FREE PRODUCT" and lines C.4.b. through C.4.d. are left blank. Otherwise, complete the following calculations.
There typically are several compounds at most contaminated sites that exceed the standards in ch. NR 140. The purpose of this question is to focus on the single contaminant that requires the most treatment to achieve groundwater quality standards on a percent reduction basis. For example, the most recent round of sampling at an example site demonstrated the highest levels of contaminants were 1,000 µg/L benzene and 1,000 µg/L toluene in the most heavily contaminated monitoring well. The ES and PAL for benzene is 5 µg/L and 0.5 µg/L (respectively) and for toluene the ES and PAL is 343 µg/L and 68.6 µg/L (ES and PAL data as of August 1995). Therefore the percent reduction to meet the ES and PAL for benzene is 99.5 and 99.95 percent and for toluene it is 65.7 and 93.14 percent. For that reason, the single contaminant that is most critical to reaching state groundwater standards is benzene. Therefore benzene is entered on line a. In this example, 99.5 and 99.95 percent is entered on line b. In this example, 1,000 µg/L is entered on line c. In this example, benzene is the driving factor, therefore enter the maximum benzene level in the single most heavily contaminated extraction well during the most recent sampling period on line d.
- D. See the generic discussion at the end of the instructions (below) for figures, graphs and tables, starting on page INS-2.

Section GW-2, In Situ Air Sparging

- B.1. See instructions for Section GW-1, Item C.4.
- C. See the generic discussion at the end of the instructions (below) for figures, graphs and tables, starting on page INS-2.

Section GW-3, Natural Attenuation in Groundwater

- A.1. See instructions for Section GW-1, Item C.4.
- A.2.a. List the estimated hydraulic conductivity that was listed on line A.11 in Section GI-1.
- A.2.b. List the groundwater average linear velocity that was listed on line A.12 in Section GI-1.
- A.3. Assess the monitoring well network to determine if there is a down gradient well that has not been impacted by the contaminants. Consider the possibility of a submerged (or diving) plume in that assessment. If all evidence indicates that the plume does not extend to the farthest "clean" downgradient well, indicate "YES" on the form. Otherwise indicate "NO" on the form. If there are not plans to install such a well, explain.
- A.4. Based on the contaminant distribution, evaluate whether or not the plume is expanding, stabilized, or contracting. When making this determination, consider the contaminant that requires the greatest percent reduction to achieve ch. NR 140 standards.
- A.5. If the plume is expanding and a justification is necessary, add additional sheets justifying why natural attenuation is still the appropriate remedy. If it is not, further describe in the explanation the plans to use a different remedy.
- A.6.a. Enter the upgradient dissolved oxygen (DO) level(s). If however there are contaminants measured in the upgradient well, it is not a true background measurement. In that case enter "UNKNOWN" on the form.
- A.6.b. Enter the range of DO values measured in wells within the plume.
- B. See the generic discussion at the end of the instructions (below) for figures, graphs and tables, starting on page INS-2.

Section GW-4, Other Groundwater Remediation Methods

- A.1. See instructions for Section GW-1, Item C.4.
- A.2. Self explanatory.
- A.3-4. Enter the information specified by the DNR for this method at this site.

Section IS-1, Soil Venting (Including both Soil Vapor Extraction and Bioventing)

- B.3. This subsection is used as a trigger for determining if the system requires an evaluation for future activities, such as improvements, converting the site to monitoring for natural attenuation, closure, etc. If an in situ respiration test must be performed, see Hinchee, R.E. and Ong, S.K. 1992. A Rapid In Situ Respiration Test for Measuring Aerobic Biodegradation Rates of Hydrocarbons in Soil. *Journal of the Air and Waste Management Association*. Volume 42, Number 10. Pages 1305 to 1312 for general procedures. For a discussion of methane monitoring, see the instructions for Section IS-2, item A.1.d., below. If the contaminant extraction rate in B.3. is greater than the trigger levels, leave lines B.3.a.i. and B.3.a.ii. blank.
- C. See the generic discussion at the end of the instructions (below) for figures, graphs and tables, starting on page INS-2.

Section IS-2, Natural Attenuation in Soil

- A.1. This data is used to assess subsurface conditions based on soil gas data. Whenever possible, a permanently installed gas probe should be used. If at all possible, the gas probe should be located in the part of the site that is most heavily contaminated, since that is the part of the site that is likely to take the longest amount of time to meet ch. NR 720 standards. Water table wells that have screen exposed above the water table are also good measuring points. When installing permanent gas probes, you should install the screen deep enough that a true measure of the most heavily contaminated soil is possible, but install the screen shallow enough to assure that it is not submerged by groundwater table fluctuations. In some situations where the depth of contamination is variable, consideration should be given to using nested gas probes instead of only using probes at a single depth. Measuring points that should not be used include temporary gas probes because these points are less repeatable from one monitoring event to the next. Also, if there has been an active soil venting system in use at the site, the air extraction wells should not be used because these wells are in locations that have had much more aggressive treatment than the rest of the site.
- A.1.a. A flame ionization detector (FID) is specified instead of a photo ionization detector (PID) because PIDs often read inaccurately in moist oxygen deficient/carbon dioxide rich atmospheres. Also, PIDs do not detect some petroleum compounds.
- A.1.d. Methane readings are used to measure for anaerobic conditions. When the original product that is lost is a refined petroleum product (not crude oil), there should not be any methane within the product. Methane however may be produced under very anaerobic conditions. Any method may be used for measuring methane provided that the detection limit is less than a few ppm_v. One convenient method is to use an FID that is equipped with a granular activated carbon filter to filter out non-methane components. Some instrument manufacturers make these filters available as options. In some cases an FID will flame out due to an oxygen deficiency. Some instrument manufacturers offer a dilution device as an accessory that is designed to prevent flameouts and also raises the upper limit of measurement to 10,000 ppm_v or higher. If the meter "pegs" at 10,000 ppm_v (or one percent), enter ">10,000 ppm_v."
- A.2. The background monitoring point is predominantly used to measure natural oxygen and carbon dioxide levels in soil over time. For this reason, the background monitoring point should be reasonably close to the site, but not so close that the conditions are no longer representative. Considerable variations over time can occur, this background point should be measured during every sample event. Considerations for determining if a background point is representative include:
 - o If an on-site background point has minor levels of VOCs in it due to gas phase diffusion, that is acceptable, but if the levels are high, it may not be representative of true background conditions.
 - o Background oxygen and carbon dioxide levels vary with soil type and natural organic carbon content. For this reason, if at all possible, the soil types should be identical within the screened interval of all gas probes.
 - o The same depths should be used for all gas probes to allow comparison from one location to the next. If the depth to water varies greatly across the site, a certain amount of confusion in the data is likely. In this case, use professional judgement to provide the best data possible at a reasonable cost.
- A.3. Enter this data for petroleum fuel sites. For other sites, provide the data that is most appropriate for the situation.
- B. Cross sections are self explanatory, see the generic discussion at the end of the instructions (below) for other attachments.

Section IS-3, Other In Situ Soil Treatment Methods

- A.2. Enter the information specified by the DNR for this method at this site.

Remediation Site Operation, Maintenance, Monitoring & Optimization Report

Form 4400-194 (R 11/14)

Page 21 of 28

Section ES-1, Ex Situ Soil Treatment Using Biopiles

- A.3.a. The term "artificial nutrients" essentially means agricultural fertilizers or any other fertilizer products.
- A.3.a.i. The types of fertilizers that are added should be listed here by chemical names, not by vendor trade names.
- A.3.a.ii. List nitrogen content as N, list phosphorous content as phosphoric acid (P₂O₅). Note: Fertilizer ratings are based not on actual content of N, P and K, but on nitrogen (as N), phosphorous (as P₂O₅) and potassium (as K₂O).
- A.4.c. See example calculations at the end of this set of instructions.
- A.5. Enter this data for petroleum fuel sites. For other sites, provide the data that is most appropriate for the situation.
- B. The figure is self explanatory. See the generic discussion at the end of the instructions (below) for instructions for the tables.

Section ES-2, Ex Situ Soil Treatment Using Landspreading/Thinspreading

- B. A map to scale of the landspreading location including and landmarks or benchmarks. When samples have been collected, the distances to any landmarks or benchmarks should be indicated.

Section ES-3, Other Ex Situ Soil Treatment Methods

- A.2. Enter the information specified by the DNR for this method at this site.

Section INS- 2, Figures, Graphs and Tables

When figures and graphs are specified, they should at a minimum contain the following information, or an explanation as to why the information is not necessary.

Maps. All maps should include the applicable information specified in s. NR 724.11(6), Wis. Adm. Code. In most cases, all information can be combined into a single map. There are times that a single map will have so much data that it is essentially unreadable. The consultant should use professional judgement when determining if a single map or multiple maps best portray the information necessary.

- Groundwater Contour Map Guidelines.

- List groundwater elevations for each measuring point on the map.
- Use the most recent data available.
- For water table maps, do not use data from deeper piezometers. If piezometer data is shown, use a different symbol for the piezometers than used for water table wells.
- If any wells are dry, indicate that on the map.
- If free product is present at site, shade the area where free product is estimated to be present.
- If groundwater is extracted with a pump and treat system, also denote plume capture zone.
- If in situ air sparging or soil venting is in use, specify on the map if the system was operating or shut down during the water level measurements. See the Subsection on water table maps in the *Guidance on Design, Installation and Operation of Ground Water Extraction and Product Recovery Systems* for more information on this topic.

- Groundwater Contaminant Distribution Map Guidelines.

- Only contaminants that exceed the ch. NR 140 ES or PAL should be shown on the map. When contaminants are above the PAL or ES at some data points and below the PAL or ES at other data points, list the data for all locations to portray which areas of the site meet ch. NR 140 groundwater quality standards.
- If a well is not sampled due to the presence of free product indicate "FREE PRODUCT" at those data points.
- If more than five contaminants exceed ch. NR 140 ES, only the five contaminants that require the greatest percent reduction to achieve ch. NR 140 ES or PAL should be shown on the map.
- Drawing isoconcentration lines is optional, unless specified for the site on a site specific basis.
- If the contamination has crossed the property line, that property line should be clearly denoted on the map.
- If in situ air sparging is used, water samples from ch. NR 141 type monitoring wells may not represent aquifer water quality as a whole. For that reason, groundwater data should be obtained from driven probes with no filter pack. If there are no driven probes and conventional ch. NR 141 monitoring wells are used, shut down the air injection system at least two weeks prior to collecting groundwater samples. See the *Guidance on Design, Installation and Operation of In Situ Air Sparging Systems* and the August 1995 update sheets for more information on this topic.

- Dissolved Oxygen Map Guidelines.

- Dissolved oxygen data may be shown on the contaminant concentration graphs or on a separate graph.
- Dissolved oxygen maps are optional for ground water extraction and product recovery systems.
- When in situ air sparging is used, monitoring points may not represent aquifer water quality as a whole. For that reason, groundwater data should be obtained from driven probes with no filter pack. If there are no driven probes and conventional ch. NR 141 monitoring wells are used, shut down the air injection system at least two weeks prior to collecting groundwater samples for DO. See the *Guidance on Design, Installation and Operation of In Situ Air Sparging Systems* and the August 1995 update sheets for more information on this topic.

- Well and Soil Sample Location Map Guidelines. Well and sample location maps for all methods should clearly indicate the location(s) of the release or the area where soil contamination historically has been highest. Also, if part of the contamination has been excavated, the pit boundaries.

The recommended documentation for each remedial method is as follows:

- Groundwater Extraction and Product Recovery - separate well location maps should not be provided, instead the wells should be indicated on the groundwater contour and contaminant distribution maps.
- In Situ Air Sparging - the map should indicate all air injection wells, soil venting extraction wells, and all groundwater monitoring points.

Maps (Continued).

- Natural Attenuation in Groundwater - separate well location maps should not be provided, instead the wells should be indicated on the groundwater contour maps.
- Soil Venting - indicate all air extraction wells. If any gas probes are used to assess subsurface conditions in either contaminated zones or background locations, also indicate those data points with a different symbol. If soil samples have been collected recently to track progress, indicate those locations with the date of sampling noted on the map.
- Natural Attenuation in Soil - show all monitoring points. Indicate which data points are background measuring points. If soil samples have been collected recently to track progress, indicate those locations with the date of sampling noted on the map. If the site was previously treated by soil venting, the locations of former air extraction wells should also be shown since these are areas where aggressive treatment has been applied. Also show area(s) of paved and unpaved ground surface. If pavement is significantly broken to allow significant water infiltration and air diffusion, map that area as broken pavement.

Graphs. All graphs that show time versus contaminant concentration or cumulative contaminant removal should be based on total time, not only operation time. All graphs that denote cumulative removal should use pounds of contaminant removed. Graphs should accurately show the time period(s) when the system was not operating. Plot time on the X axis, concentration or cumulative removal data on the Y axis.

- Time Versus Cumulative Removal. The recommended documentation for each remedial method is as follows:
 - Groundwater Extraction and Product Recovery - separate graphs should be used for free product recovery and dissolved phase recovery. A single graph for each phase is adequate, per well graphs are only necessary when specified by the Department on a site specific basis.
 - In Situ Air Sparging - no graph is necessary (removal data is shown on the graphs for the soil venting system).
 - Natural Attenuation in Groundwater - no graph is necessary.
 - Soil Venting - provide a graph of cumulative removal for total VOCs for the total system.
 - Natural Attenuation in Soil - no graph is necessary.
 - Ex Situ Soil Treatment Using Biopiles - Provide two graphs, one showing cumulative removal of total VOCs and a second graph showing total contaminant biodegradation over time.
 - Ex Situ Soil Treatment Using Landspreading/Thinspreading - no graphs are needed.
- Time Versus Contamination Concentration Graphs. Create graphs with contamination level on the y axis (semilog scale) and time on the x axis (linear scale). If free product is present, time versus contamination concentration graphs are not necessary.

The recommended documentation for each remedial method is as follows:

- Groundwater Extraction and Product Recovery - graph the contaminant level over time for the groundwater that is extracted by the extraction system. List all compounds that exceed ch. NR 140 ES or PAL. If over five contaminants exceed ch. NR 140 ES or PAL, only list the five contaminants that exceed ch. NR 140 standards by the greatest percent.
- In Situ Air Sparging - provide a graph for the single monitoring well that is most heavily contaminated. If over five contaminants exceed ch. NR 140 ES or PAL, only list the five contaminants that exceed ch. NR 140 standards by the greatest percent.
- Natural Attenuation in Groundwater - provide a graph for all monitoring wells that contain any compounds that exceed ch. NR 140 standards. If over five contaminants exceed ch. NR 140 ES or PAL, only list the five contaminants that exceed ch. NR 140 standards by the greatest percent.
- Soil Venting - provide a graph of contaminant concentration over time for the entire system for total VOCs. If any gas probes are used to assess subsurface conditions in either contaminated zones, also provide a graph with the data from the most heavily contaminated gas probe.
- Natural Attenuation in Soil - provide a graph of contaminant concentration over time for total vapor phase VOCs as measured with an FID, oxygen, carbon dioxide and methane in an gas probe.
- Ex Situ Soil Treatment Using Biopiles - no graph is necessary.
- Ex Situ Soil Treatment Using Landspreading/Thinspreading - no graphs are needed.

Graphs (Continued).

- Graph of Contaminant Concentrations Versus Distance. If free product is present, a graph of contaminant concentrations versus distance is not necessary.

The recommended documentation for each remedial method is as follows:

- Groundwater Extraction and Product Recovery - no graph is necessary.
- In Situ Air Sparging and Natural Attenuation in Groundwater - plot a graph with distance (on the x axis, linear scale) and contaminant concentrations (y axis, log scale) from the upgradient measurement point to the farthest downgradient data point along the centerline of the plume. List the same contaminants as shown on the Time Versus Contaminant Concentration Graphs. Clearly show the source area on the graph. If free product has been present, label the data points that previously contained free product. For in situ air sparging, see comments above about samples collected from conventional monitoring wells with filter packs versus driven probes.

Tables. Whenever possible, data over the life of the project should be listed.

The recommended documentation for each type of table is as follows:

- Groundwater Contaminant Chemistry Data.

List:

- Contamination levels for all contaminants that exceed ch. NR 140 standards.
- Dissolved oxygen levels if applicable.
- Other biological parameters, if applicable (nitrogen, phosphorous, manganese, sulphate, iron, dissolved methane, redox potential, pH, microbial population size, etc.). See instructions for page GW-3 for more information on these parameters. Also, list the dates the samples were collected and the standard methods used to analyze the samples.

- Groundwater Biological Parameters.

For natural attenuation in groundwater only, these measurements should be listed (if known) to provide information on biodegradation. This table is not necessary for free product extraction, groundwater extraction or in situ air sparging.

Provide a table that includes any results of tests conducted for dissolved oxygen, nitrate, manganese, iron, sulphate, methane, redox potential, heterotrophic and/or hydrocarbon degrading microorganism populations. Identify on the table if the monitoring locations are upgradient, side gradient, downgradient, or within the plume, dates of sampling, and the analytical methods used for those parameters. Include all data for the life of the project. Since some of these tests are only conducted once, or periodically - enter "NS" in the table for not sampled for any parameters that were not sampled during a particular round of sampling.

When asked to list the standard methods, list the method if a standard method exists. There are however some tests (for example dissolved methane) where there are no official standard laboratory or field methods. In this case the laboratory will have to create their own standard procedures. In these cases list the name of the laboratory and that laboratory's name for that test.

Specific considerations for each parameter are as follows:

- Dissolved oxygen (mg/L). The most efficient mechanism for natural or enhanced biodegradation of petroleum compounds is aerobic biodegradation.
- Nitrate (mg/L as N). Nitrate (NO_3^{-1}) is a potential electron acceptor for denitrification and also serves as a nutrient for heterotrophic microbial populations to enhance aerobic biodegradation. Decreasing nitrate levels from background wells to wells within the plume are an indication of either aerobic or anaerobic biodegradation.
- Manganese as Mn^{+2} (mg/L). Manganese as Mn^{+4} is converted to soluble manganese as Mn^{+2} under anaerobic biodegradation. For this reason, total manganese analysis is not appropriate, only soluble manganese as Mn^{+2} . When the levels of soluble manganese are higher in wells within the plume than in background wells, that is an indication of anaerobic biodegradation.
- Iron as Fe^{+2} (mg/L). Iron as Fe^{+3} is converted to soluble iron as Fe^{+2} under anaerobic biodegradation. For this reason, total iron analysis is not appropriate, only soluble iron as Fe^{+2} . When the levels of soluble iron are higher in wells within the plume than in background wells, that is an indication of anaerobic biodegradation.

Tables (Continued).

- Dissolved sulphate (SO_4^{-2} , mg/L). Sulphate (SO_4^{-2}) is a potential electron acceptor. Decreasing sulphate levels from background wells to wells within the plume are an indication of anaerobic biodegradation.
- Dissolved methane (mg/L). Methane is produced under anaerobic conditions. Since background methane levels can usually be assumed to be zero, in most cases only measurements within the plume are used. Exceptions are when the natural soils have very high levels of TOC (for example peat), background methane levels are also warranted. When the contaminant is crude oil instead of a refined petroleum product, methane measurements may however cause erratic results. Significant amounts of methane may be created when other electron acceptors (NO_3^{-1} , Mn^{+4} , Fe^{+3} and SO_4^{-2}) are exhausted. For this reason, significant levels of methane are indicative of very very anaerobic conditions.
- Redox potential (millivolts, include + or - sign). Redox potential is another measure of the level of aerobic/anaerobic conditions, however it is a much more sensitive measurement than DO at very low levels of DO.
- Heterotrophic and hydrocarbon degrading microorganism populations (CFU/mL). Heterotrophic and specific hydrocarbon degrader population sizes should be listed for both background locations and locations within the plume, if there is information available. There is disagreement by many of the experts within the field as to the merits of sampling for this parameter. Refer to other DNR guidance documents on natural attenuation (or passive bioremediation) for more information on this topic.

- Soil Gas Data.

The recommended documentation for each remedial method is as follows:

- When natural attenuation in soil is used, provide a graph of all soil gas readings over time for every data point.
- When soil venting is used, if a gas probe is used to assess subsurface conditions over time in a location where air is not extracted, provide that data in a table.

- System Operational Data.

The recommended documentation for each remedial method is as follows:

- Groundwater Extraction and Product Recovery:
 - Well by well flow rates in gpm for each extraction well. If a well is off line, list flow rate as "ZERO." Clearly denote on the table periods of system shutdown.
- In Situ Air Sparging:
 - Air pressure and injection flow rates in scfm for each well. If a well is off line, list flow rate as "ZERO." Clearly denote on the table periods of system shutdown.
- Natural Attenuation in Groundwater - no table needed.
- Soil Venting:
 - Vacuum readings and extraction rates in scfm for each well. If a well is off line, list flow rate as "ZERO." Clearly denote on the table periods of system shutdown.
 - Air concentrations in ppm_v or in mg/L for total VOCs.
 - Total system contaminants removed in pounds and the pounds per day removal rate.
- Natural Attenuation in Soil - no table needed.

Section INS-3, Example Calculations for Determining the Biodegradation Rate on Forced Air Biopiles

Important Note: This page uses a nonproportional font and characters that are unique to WordPerfect. If the user received this document electronically, this page may need to be converted to a different font for the formulas to print correctly. The original font used for this page was prestige elite with 16.67 characters per inch.

Assumptions:

- The measurements at the stack are as follows:
 - Average flow rate is 20 scfm.
 - Average oxygen level extracted from biopile is 14.0 percent by volume.
 - Average carbon dioxide level extracted from biopile is 3.5 percent by volume or 35,000 ppmv.
- Atmospheric air contains 21 percent oxygen by volume and 400 ppmv (or 0.04 percent) carbon dioxide. (Note: On each site visit, the consultant should check atmospheric air to assure that the instrument is spanned correctly.)
- Atmospheric air weight 0.0763 pounds per cubic foot at standard temperature and pressure (Gibbs, 1971).
- Average molecular weight of air is 28.97 (Gibbs, 1971) which is rounded off to 29, molecular weight of O2 is 32, molecular weight of CO2 is 44.
- For every pound of contaminants biodegraded, 3.3 pounds of oxygen is utilized and up to 3.2 pounds of carbon dioxide is generated.

-- The stoichiometry of aerobic benzene biodegradation can be described as follows:

Based on this, benzene biodegradation requires that 3.07 pounds of oxygen are utilized to fully oxidize one pound of benzene, assuming no electron acceptors other than oxygen are used. Assuming no biomass is produced and no geochemical reactions consume carbon dioxide, 3.38 pounds of carbon dioxide is generated from one pound of benzene.

-- The stoichiometry of aerobic hexane biodegradation can be described as follows:

Based on the above assumptions, hexane biodegradation requires 3.52 pounds of oxygen and generates up to 3.06 pounds of carbon dioxide.

Other hydrocarbons also require a similar ratio of oxygen for aerobic biodegradation. For purposes of this guidance it is assumed that a pound of petroleum contamination requires 3.3 pounds of oxygen and generates up to 3.2 pounds of carbon dioxide and 1.1 pounds of water in the biodegradation reaction.

Calculations:

Oxygen utilization rate:

$$\frac{(0.21 - 0.14) * \frac{32 \text{ pounds}}{29 \text{ ft}^3} * 0.0763 \frac{\text{ft}^3}{\text{min}} * 20 \frac{\text{min}}{\text{hour}} * 60 \frac{\text{hour}}{\text{hour}}}{1} = 7.07$$

Carbon dioxide production rate:

$$\frac{(0.035 - 0.0004) * \frac{44 \text{ pounds}}{29 \text{ ft}^3} * 0.0763 \frac{\text{ft}^3}{\text{min}} * 20 \frac{\text{min}}{\text{hour}} * 60 \frac{\text{hour}}{\text{hour}}}{1} = 4.81$$

Biodegradation rate based on oxygen:

$$7.07 / 3.3 = 2.1 \text{ pounds per hour}$$

Biodegradation rate based on carbon dioxide:

$$4.81 / 3.2 = 1.5 \text{ pounds per hour}$$

Since the biodegradation rate is based on oxygen utilization and/or carbon dioxide generation, it is a measure of the overall biodegradation rate of all carbon sources, including natural organic carbon and any organic materials that were added. For this reason, the biodegradation rate is not specific to hydrocarbons and it is likely that the measured biodegradation rate will overestimate the rate of contaminant reduction.

Commonly the measured biodegradation rate based on carbon dioxide generation is less than the rate estimated with oxygen. Because of geochemical interferences and biomass formation, estimates based on carbon dioxide measurements are often low. If however the biodegradation rate estimate based on carbon dioxide is significantly greater than the estimate based on oxygen, it is likely that there is a measurement or calculation error. In this way, the carbon dioxide measurements can be used to double check the oxygen measurements and calculations.

Subject: Discharge Monitoring Report - Groundwater Extraction and Treatment System,
Madison Kipp Corporation, 201 Waubesa Street, Madison, Wisconsin

Dear Mr. Hopfensperfer,

The Groundwater Extraction and Treatment System (GETS) ran for the month of December, with the exception of maintenance activities. This letter summarizes the activities completed in December 2016 as part of the GETS at the Madison Kipp Corporation (MKC) site under the Wisconsin Pollution Discharge Elimination System (WPDES) Permit WI-0046566-6. Compliance samples were collected on December 7, 2016 per the WPDES permit, including visual monitoring for sodium permanganate neutralization. The compliance sample results were below the WPDES discharge limits. The Discharge Monitoring Report is included as Attachment A and laboratory reports are included as Attachment B.

During the latter part of the month of November, the GETS was shut down for approximately three days while troubleshooting an issue with one of the transfer pumps. The pump was replaced on December 2, 2016 and the system operated for the remainder of the month of December. If you have any questions or need additional information, please contact Andrew Stehn of TRC Environmental at astehn@trcsolutions.com or (608) 826-3665.

treatment									
Sample Type	Grab	Grab	Grab	Grab	Grab	Grab	Grab	Grab	

FOOTNOTES:

- (1) Total BTEX is the sum of the benzene, ethylbenzene, toluene and xylene concentrations. If all compounds were below their corresponding laboratory detection limits, then the highest detection limit of the BTEX compounds was noted.
- (2) PAH group of 10 (Polynuclear Aromatic Hydrocarbons) include the sum of the following individual compounds: benzo(a)anthracene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene. If all compounds were below their corresponding laboratory detection limits, then the highest detection limit of the PAH group compounds was noted.
- (3) Madison Kipp/TRC will conduct visual monitoring for this compound.
- (4) No effluent limit is established, refer to section 4 of the permit.
- (5) Compound was found in the blank and in the sample.
- (6) Estimated value. Analyte detected at a level less than the reporting limit and greater than or equal to the detection limit.
- (7) Matrix Spike and/or Matrix Spike Duplicate Recovery is outside acceptance limits.

DIRECTIONS:

- For "Outfall # and Description" enter the number of the outfall you are reporting (001 or 002, etc.)
- Monitoring for a given parameter depends on if the discharge is to surface water or groundwater.
- The value entered must be the highest value of all samples analyzed for that day.
- Print additional DMRs as necessary for monthly reporting.

RETURN REPORT BY: February 15, of the year following completion of monitoring

RETURN TO: **ATTN: Nicholas Bertolas**
Department of Natural Resources
3911 Fish Hatchery Rd.
Fitchburg, WI 53711

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment, (40 CFR 122.5). I also certify that the values being submitted are the actual values found in the samples; no values have been modified or changed in any manner. Wherever I believe a value being reported is inaccurate, I have added an explanation indicating the reasons why the value is inaccurate.

Andrew M. Steh

No additional comments.

Receipt

The samples were received on 12/8/2016 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.1° C.

GC/MS VOA

Method(s) 624: The following sample was diluted to bring the concentration of target analytes within the calibration range: Influent (500-121156-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

TestAmerica Job ID: 500-121156-1

Qualifiers

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Creator: Sanchez, Ariel M

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.1
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 12/8/2016 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.1° C.

GC/MS Semi VOA

Method(s) 625 SIM: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 490-393257 and analytical batch 490-393211.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

COOLER RECEIPT FORM

500-121156 Chain of Custody

Cooler Received/Opened On 12/9/2016 @ 10:25

Time Samples Removed From Cooler 1145 Time Samples Placed In Storage 1156 (2 Hour Window)

1. Tracking # 9506 (last 4 digits, FedEx) Courier: FedEx
IR Gun ID 14740456 pH Strip Lot HC682547 Chlorine Strip Lot 8116K

2. Temperature of rep. sample or temp blank when opened: 2.4 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO NA

4. Were custody seals on outside of cooler? one front YES...NO...NA

If yes, how many and where: _____

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (initial) DA

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence # _____

I certify that I unloaded the cooler and answered questions 7-14 (initial) HKG

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) HKG

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (initial) HKG

I certify that I attached a label with the unique LIMS number to each container (initial) HKG

21. Were there Non-Conformance issues at login? YES...NO Was a NCM generated? YES...NO...# _____

Madison WI 53704

Project Name: GETS/SVE

Project #:

Workorder #: 1607487

Dear Ms. Alina Satkoski

The following report includes the data for the above referenced project for sample(s) received on 7/26/2016 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott

Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Madison-Kipp Corporation
Workorder# 1607487

Two 1 Liter Silco Canister samples were received on July 26, 2016. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

The Chain of Custody (COC) was not relinquished properly. A signature and date were not provided by the field sampler.

There was a significant difference (greater than 5.0" Hg) between the measured canister receipt vacuum and that which was reported on the Chain of Custody (COC) for sample Influent. A leak test indicated that the valve was functioning properly.

Analytical Notes

Dilution was performed on samples Effluent and Influent due to the presence of high level target species.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Workorder #: 1608324

Dear Ms. Alina Satkoski

The following report includes the data for the above referenced project for sample(s) received on 8/12/2016 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott

Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Madison-Kipp Corporation
Workorder# 1608324

Two 1 Liter Silco Canister samples were received on August 12, 2016. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

Dilution was performed on samples Influent and Effluent due to the presence of high level target species.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Project #:

Workorder #: 1609434

Dear Ms. Alina Satkoski

The following report includes the data for the above referenced project for sample(s) received on 9/16/2016 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott

Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Madison-Kipp Corporation
Workorder# 1609434

Three 1 Liter Silco Canister samples were received on September 16, 2016. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There was a significant difference (greater than 5.0" Hg) between the measured canister receipt vacuum and that which was reported on the Chain of Custody (COC) for sample Effluent. A leak test indicated that the valve was functioning properly.

Analytical Notes

Dilution was performed on samples Effluent and Combined Influent due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

**Summary of Detected Compounds
EPA METHOD TO-15 GC/MS FULL SCAN**

Client Sample ID: Effluent

Lab ID#: 1609434-01A

Compound	Rpt. Limit (ppbv)	Amount (ppbv)	Rpt. Limit (ug/m3)	Amount (ug/m3)
cis-1,2-Dichloroethene	5.2	1300	21	5100
Trichloroethene	5.2	32	28	170
Tetrachloroethene	5.2	140	35	950

Client Sample ID: Combined Influent

Lab ID#: 1609434-02A

Compound	Rpt. Limit (ppbv)	Amount (ppbv)	Rpt. Limit (ug/m3)	Amount (ug/m3)
cis-1,2-Dichloroethene	7.2	350	28	1400
Trichloroethene	7.2	390	39	2100
Tetrachloroethene	7.2	2000	49	13000

Client Sample ID: SVE Influent

Lab ID#: 1609434-03A

Compound	Rpt. Limit (ppbv)	Amount (ppbv)	Rpt. Limit (ug/m3)	Amount (ug/m3)
cis-1,2-Dichloroethene	1.0	79	4.1	310
Trichloroethene	1.0	70	5.6	380
Tetrachloroethene	1.0	370	7.0	2500

Air Toxics

Client Sample ID: Effluent

Lab ID#: 1609434-01A

EPA METHOD TO-15 GC/MS FULL SCAN

File Name:	3092815	Date of Collection:	9/9/16 11:30:00 AM

Compound	Rpt. Limit (ppbv)	Amount (ppbv)	Rpt. Limit (ug/m3)	Amount (ug/m3)
Freon 12	5.2	Not Detected	26	Not Detected
Freon 114	5.2	Not Detected	36	Not Detected
Chloromethane	52	Not Detected	110	Not Detected
Vinyl Chloride	5.2	Not Detected	13	Not Detected
Bromomethane	52	Not Detected	200	Not Detected
Chloroethane	21	Not Detected	55	Not Detected
Freon 11	5.2	Not Detected	29	Not Detected
Freon 113	5.2	Not Detected	40	Not Detected
1,1-Dichloroethene	5.2	Not Detected	21	Not Detected
Methylene Chloride	52	Not Detected	180	Not Detected
Methyl tert-butyl ether	21	Not Detected	75	Not Detected
1,1-Dichloroethane	5.2	Not Detected	21	Not Detected
cis-1,2-Dichloroethene	5.2	1300	21	5100
Chloroform	5.2	Not Detected	25	Not Detected
1,1,1-Trichloroethane	5.2	Not Detected	28	Not Detected
Carbon Tetrachloride	5.2	Not Detected	33	Not Detected
Benzene	5.2	Not Detected	17	Not Detected
1,2-Dichloroethane	5.2	Not Detected	21	Not Detected
Trichloroethene	5.2	32	28	170
1,2-Dichloropropane	5.2	Not Detected	24	Not Detected
cis-1,3-Dichloropropene	5.2	Not Detected	24	Not Detected
Toluene	5.2	Not Detected	20	Not Detected
trans-1,3-Dichloropropene	5.2	Not Detected	24	Not Detected
1,1,2-Trichloroethane	5.2	Not Detected	28	Not Detected
Tetrachloroethene	5.2	140	35	950
1,2-Dibromoethane (EDB)	5.2	Not Detected	40	Not Detected
Chlorobenzene	5.2	Not Detected	24	Not Detected
Ethyl Benzene	5.2	Not Detected	22	Not Detected
m,p-Xylene	5.2	Not Detected	22	Not Detected
o-Xylene	5.2	Not Detected	22	Not Detected
Styrene	5.2	Not Detected	22	Not Detected
1,1,2,2-Tetrachloroethane	5.2	Not Detected	36	Not Detected
1,3,5-Trimethylbenzene	5.2	Not Detected	26	Not Detected
1,2,4-Trimethylbenzene	5.2	Not Detected	26	Not Detected
1,3-Dichlorobenzene	5.2	Not Detected	31	Not Detected
1,4-Dichlorobenzene	5.2	Not Detected	31	Not Detected
alpha-Chlorotoluene	5.2	Not Detected	27	Not Detected
1,2-Dichlorobenzene	5.2	Not Detected	31	Not Detected
1,2,4-Trichlorobenzene	21	Not Detected	150	Not Detected
Hexachlorobutadiene	21	Not Detected	220	Not Detected

Container Type: 1 Liter Silco Canister

Project Name: GETS/SVE

Project #:

Workorder #: 1610352

Dear Ms. Alina Satkoski

The following report includes the data for the above referenced project for sample(s) received on 10/17/2016 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott

Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Madison-Kipp Corporation
Workorder# 1610352

Two 1 Liter Silco Canister samples were received on October 17, 2016. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

Dilution was performed on sample Influent due to the presence of high level target species.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

**Summary of Detected Compounds

Project #:

Workorder #: 1611221

Dear Ms. Alina Satkoski

The following report includes the data for the above referenced project for sample(s) received on 11/11/2016 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott

Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Madison-Kipp Corporation
Workorder# 1611221

Two 1 Liter Silco Canister samples were received on November 11, 2016. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

Sample collection date was not provided on the Chain of Custody (COC) for samples Effluent and Influent. The sampling date was taken from the tag.

Analytical Notes

Dilution was performed on samples Effluent and Influent due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Project #:

Workorder #: 1612151

Dear Ms. Alina Satkoski

The following report includes the data for the above referenced project for sample(s) received on 12/12/2016 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott

Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Madison-Kipp Corporation
Workorder# 1612151

Three 1 Liter Summa Canister samples were received on December 12, 2016. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

Dilution was performed on samples Effluent and Influent due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Summary of Detected Compounds

RE: Madison Kipp Corp. Quarterly Sampling

Enclosed are the analytical results for the samples received by the laboratory on 07/20/2016.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. These results are in compliance with the 2009 NELAC Standards and the appropriate agencies listed below, unless otherwise noted in the case narrative. This analytical report should be reproduced in its entirety.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jessica Esser
Project Manager

CASE NARRATIVE

Sample Receipt Information:

20 samples were received on 07/20/2016. Samples were received on ice.

Sample A163008-10 had a discrepancy between the collection time on the chain of custody (COC) and the collection time on the sample container. Per the client, the sample container collection time is correct.

Please see the chain of custody (COC) document at the end of this report for additional information.

Continuing Calibration Verification (CCV):

The LC footnote on samples A163008-01, A163008-02, A163008-04 and A163008-05 states that there was a low CCV recovery for naphthalene. The lower control limit is 70% and the recovery was 67.4%.

The LC footnote on samples A163008-06, A163008-07, A163008-09, A163008-15, A163008-16 and A163008-20 states that there was a low CCV recovery for trans-1,3-dichloropropene. The lower control limit is 70% and the recovery was 65.6%.

CCV indicates a potential high bias for carbon disulfide, chloroform, chloromethane, dichlorodifluoromethane and methylene chloride for multiple samples. The upper control limit is 130% and the recoveries were between 135% and 211%. Any detections are footnoted with an HC. For the samples where results were less than the reporting limit no further action is required.

Notes and Definitions

- X Precision for the matrix spike duplicate, laboratory control sample duplicate or lab duplicate was outside of control limits.
- M1 Spike recoveries were not evaluated because of elevated levels of the spiked analyte in the parent sample.
- LC Results may be biased low because of low continuing calibration verification (CCV).
- J Analyte was detected but is below the reporting limit. The concentration is estimated.
- HC Results may be biased high because of high continuing calibration verification (CCV).
- D Data reported from a dilution
- B Analyte is also detected in the associated method blank.
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis. If the word 'dry' does not appear after the units, results are reported on an as-is basis.
- RPD Relative Percent Difference

RE: Madison Kipp Corp. Quarterly Sampling

Enclosed are the analytical results for the samples received by the laboratory on 10/17/2016.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. These results are in compliance with the 2009 NELAP Standards and the appropriate agencies listed below, unless otherwise noted in the case narrative. This analytical report should be reproduced in its entirety.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jessica Esser
Project Manager

CASE NARRATIVE

Sample Receipt Information:

50 samples were received on 10/17/2016. Samples were hand delivered on ice. Samples were received in acceptable condition.

Samples A164301-15, A164301-17 and A164301-26 had discrepancies between the chain of custody (COC) and the containers. The correct information was confirmed with the client.

Please see the chain of custody (COC) document at the end of this report for additional information.

Laboratory Control Samples (LCS):

The LCS recovery indicates a potential high bias for acetone for samples A164301-41 through A164301-50. Samples were less than the reporting limit for this analyte so no further action is required.

Continuing Calibration Verification (CCV):

The LC footnote on samples A164301-21 through A164301-40 states that there was a low CCV recovery for bromomethane. The lower control limit is 70% and the lowest recovery was 51.2%.

CCV also indicates a potential high bias for multiple analytes for the VOCs by method 8260 analysis. Any detections for affected compounds are footnoted with an HC. The upper control limits are 120% and 130%, and the highest recovery was 138%. For the samples where results were less than the reporting limit no further action is required.

Volatile Organic Compounds by Method 8260 - Purge and Trap

Preparation Batch:A610048

1,1,1,2-Tetrachloroethane	ND	22	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,1,1-Trichloroethane	ND	20	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,1,2,2-Tetrachloroethane	ND	20	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,1,2-Trichloroethane	ND	20	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,1,2-Trichlorotrifluoroethane	ND	26	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,1-Dichloroethane	ND	24	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,1-Dichloroethene	ND	28	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,1-Dichloropropene	ND	22	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,2,3-Trichlorobenzene	ND	9.0	400	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,2,3-Trichloropropane	ND	30	200	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,2,4-Trichlorobenzene	ND	15	400	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,2,4-Trimethylbenzene	ND	12	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,2-Dibromo-3-chloropropane	ND	50	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,2-Dibromoethane (EDB)	ND	26	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,2-Dichlorobenzene	ND	15	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,2-Dichloroethane	ND	16	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,2-Dichloropropane	ND	20	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,3,5-Trimethylbenzene	ND	15	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,3-Dichlorobenzene	ND	19	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,3-Dichloropropane	ND	22	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
1,4-Dichlorobenzene	ND	14	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
2,2-Dichloropropane	ND	28	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
2-Butanone	ND	600	4000	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
2-Chlorotoluene	ND	15	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
2-Hexanone	ND	190	4000	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
4-Chlorotoluene	ND	15	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
4-Methyl-2-pentanone	ND	150	4000	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Acetone	ND	680	4000	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Benzene	ND	18	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Bromobenzene	ND	17	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Bromochloromethane	ND	62	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Bromodichloromethane	ND	15	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Bromoform	ND	18	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Bromomethane	ND	120	1000	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Carbon disulfide	ND	11	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Carbon tetrachloride	ND	7.6	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Chlorobenzene	ND	15	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Chloroethane	ND	50	1000	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B	
Chloroform	ND	12	100	ug/L	200	10/20/2016	10/20/2016 20:33	EPA 8260B

Notes and Definitions

- X Precision for the matrix spike duplicate, laboratory control sample duplicate or lab duplicate was outside of control limits.
- M1 Spike recoveries were not evaluated because of elevated levels of the spiked analyte in the parent sample.
- M The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory control limits.
- LC Results may be biased low because of low continuing calibration verification (CCV).
- J Analyte was detected but is below the reporting limit. The concentration is estimated.
- HC Results may be biased high because of high continuing calibration verification (CCV).
- D Data reported from a dilution
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis. If the word 'dry' does not appear after the units, results are reported on an as-is basis.
- RPD Relative Percent Difference

Appendix F Annual Soil Gas Monitoring Laboratory Analytical Report

8/5/2016

Mr. Andrew Stehn
TRC Corporation (RMT)
708 Heartland Trail
Suite 3000
Madison WI 53717

Project Name: MKC
Project #: 243950
Workorder #: 1607564

Dear Mr. Andrew Stehn

The following report includes the data for the above referenced project for sample(s) received on 7/29/2016 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
TRC Corporation (RMT)
Workorder# 1607564

Eight 6 Liter Summa Canister samples were received on July 29, 2016. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

Dilution was performed on sample VP-102 due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue
