#### ENVIRONMENT

Subject:  
Soil Vapor Extraction (SVE) System Progress Report, March 2015 through August 2015, Madison-Kipp Corporation (MKC) Site, 201 Waubesa Street, Madison, Wisconsin.

Date:  
September 30, 2015

Dear Mr. Schmoller:

On behalf of MKC, this progress report provides a summary of the SVE system monitoring completed as part of the MKC site located at 201 Waubesa Street in Madison, Wisconsin. This SVE Progress Report provides a summary of tasks completed during the period of March 1 through August 31, 2015.

#### Tasks Completed – March 1 through August 31, 2015

During the reporting period, SVE system Operation, Maintenance and Monitoring (OM&M) was performed by ARCADIS and/or MKC personnel each week. All water generated during SVE maintenance activities from March 1 through July 13 was incorporated by MKC with the facility process water on site. Monthly SVE OM&M was performed by MKC personnel March 18, April 23, May 21 and June 17.

On July 14, 2015, the SVE system effluent was combined with effluent from the groundwater extraction and treatment system (GETS) air stripper of the on the site. As part of the system modification, the carbon vessel and granular carbon were replaced for the combined system discharge treatment. Additionally, after July 14 any water generated during SVE maintenance activities was incorporated, treated, and discharged by the GETS. In accordance with Wisconsin Administrative Code NR 419, effluent samples were collected during the first three days of combined system operation, weekly for the next three weeks, and monthly thereafter. During the reporting period, system OM&M was performed and samples were collected on July 14, 15, 16, 24, 30, August 5, and August 13, 2015. All samples were submitted for laboratory analysis of volatile organic compounds by United States Environmental Protection Agency Method TO-15.

Laboratory analytical data collected during the OM&M events is included in Table 1. As shown on Table 1, there has been an increase in both influent and effluent VOC concentrations since the combined system started. This is due to the addition of the air stripper discharge. Field data collected during the OM&M events is included in Table 2. The air emission tables are also included as Tables 3 through 7. A review of the air emission tables indicates the emissions rates are several orders of magnitude lower than the Wisconsin Administrative Code NR445 Emission Threshold Values.

### **Tasks In-Progress**

The following tasks are scheduled to be completed from September 1 through December 31, 2015.

- Weekly and monthly SVE system OM&M activities. The OM&M activities and data collected will be used to optimize system operation and evaluate the need for future operation of the SVE system.
- The combined SVE & GETS air effluent and OM&M activities will be reported with the GETS groundwater remediation activities on a semi-annual basis using the WDNR's Remediation Site Operation, Maintenance, Monitoring & Optimization Report Form 4400-194.

If you have any questions or require any additional information, please contact us at 414.276.7742.

Sincerely,

ARCADIS U.S., Inc.

Christopher D. Kubacki, PE  
Senior Engineer

Jennine L. Trask, PE  
Project Manager

---

**General Notes:**

Only detected constituents are noted. Constituent concentrations are reported as ppbv.

Between March 9 and October 16, 2012, the system operated with the dilution air valve 50% open to maintain system operation within maximum range of blower vacuum. On October 16, 2012, the blower was replaced and modified to allow more efficient system performance and operation with the dilution air valve fully closed.

Influent sampling began on 3/16/2012 to evaluate the effectiveness of carbon treatment.

System sampling occurred daily for the first 3 days of startup, weekly for the next 3 weeks, and monthly thereafter.

Interim system was shut down 4/29/2013. The permanent SVE system was started 5/13/2013.

The combined SVE and GETS system started operating 7/14/2015.

**Acronyms and Abbreviations:**

< = Constituent not detected above noted laboratory detection limit.

-- = Not monitored or sampled.

B = Compound was found in the blank and sample.

**Bold** = Constituent detected above laboratory detection limit.

GETS = Groundwater extraction and treatment system

J = Constituent concentration is an approximate value.

ppbv = Parts per billion by volume.

SVE = Soil vapor extraction.

**General Notes:**

Start system at 1:15 pm on March 9, 2012.

Vacuum measured with inline vacuum gauge in units of in Hg. Vacuum converted to in H<sub>2</sub>O for comparison.

Extraction well flow rate measured with inline air flow meter.

VOCs measured with a PID (calibrated to 100 ppm isobutylene).

System flow and vacuum variable due to freezing conditions at the influent lines starting 1/7/2013. System flow balanced by opening make-up air valve.

Interim system was shut down 4/29/2013. The permanent SVE system was started 5/13/2013.

Initial permanent system readings recorded 5/14/2013 after optimization.

The combined SVE and GETS system started operating 7/14/2015.

**Acronyms and Abbreviations:**

<sup>1</sup> = Vacuum measured at well head at 12:55 pm.

<sup>2</sup> = Vacuum measured at well head at 5:30 pm.

<sup>3</sup> = System restarted with make-up air value open 100 percent to reduce backpressure on blower.

<sup>4</sup> = Make-up air valve closed to 50% open to continue operation of system consistent with previous settings.

<sup>5</sup> = Vacuum measured at well head indicates influence is still being achieved at this well.

<sup>6</sup> = PID results were analyzed from tedlar bag approximately 4 hours after collection due to instrument malfunction.

<sup>7</sup> = Gauge reading above calibrated range.

-- = Not monitored.

cfm = Cubic feet per minute.

GETS = Groundwater extraction system.

in Hg = Inches of mercury.

in H<sub>2</sub>O = Inches of water column.

NM = Not measured.

PID = Photoionization detector.

ppm = Parts per million.

SVE = Soil vapor extraction.

VOCs = Volatile organic compounds reported as isobutylene.

8/5/2015	1,007.7	436	1.64E-03
8/13/2015	898.1	415	1.40E-03

**Average Emission Rate =** **9.32E-04**

**NR 445 Emission Threshold =** **5.7**

**General Notes:**

<sup>1</sup> = Total VOC concentration was based on the sum of all detected analyte concentrations in post-carbon effluent samples for dates shown. When compounds are not detected above the laboratory reporting limit, emissions are calculated using 1/2 the reporting limit.

<sup>2</sup> = Emission rates were determined using the following equation:

$$\text{Emission Rate} = \text{Conc.} * \text{Flow Rate} * 60 \text{ min/hr} * (1 \text{ m}^3/35.31 \text{ ft}^3) * (1 \text{ lb}/4.54 \times 10^8 \text{ µg})$$

<sup>3</sup> = SVE system began operation on 3/9/2012.

<sup>4</sup> = System flow rate optimized 10/16/2012 by closing make-up air valve.

Interim system was shut down 4/29/2013. The permanent system was started 5/13/2013.

The initial permanent system sample was collected 5/14/2013 after system optimization.

The combined SVE and GETS system started operating 7/14/2015.

**Acronyms and Abbreviations:**

cfm = Cubic feet per minute.

lb/hr = Pounds per hour.

µg/m<sup>3</sup> = Micrograms per cubic meter.

VOCs = Volatile organic compound.

SVE = Soil vapor extraction.

GETS = Groundwater extraction and treatment system.

Date	Total PCE Concentration <sup>1</sup>	System Flow Rate	Emission Rate <sup>2</sup>	Percent of NR 445 Emission Threshold <sup>4</sup>
	µg/m <sup>3</sup>	cfm	lb/hr	%
7/15/2015	6,500	235	5.72E-03	1.62E-02
7/16/2015	860	235	7.56E-04	2.14E-03
7/24/2015	400	403	6.03E-04	1.70E-03
7/30/2015	500	568	1.06E-03	3.00E-03
8/5/2015	690	436	1.13E-03	3.18E-03
8/13/2015	710	415	1.10E-03	3.12E-03

**Average Emission Rate = 4.79E-04 lb/hr**

**NR 445 Emission Threshold = 35.4 lb/hr**

**General Notes:**

<sup>1</sup> = VOC concentration was based on the detected analyte concentration in post-carbon effluent samples for dates shown. When compound was not detected above the laboratory reporting limit, emissions were calculated using 1/2 the reporting limit.

<sup>2</sup> = Emission rates were determined using the following equation:

<sup>3</sup> = SVE system began Emission Rate = Conc. \* Flow Rate \* 60 min/hr \* (1 m<sup>3</sup>/35.31 ft<sup>3</sup>) \* (1 lb/4.54x10<sup>8</sup> µg)

<sup>4</sup> = Post-carbon emissions presented as a percentage of the threshold level using the following equation:

<sup>5</sup> = System flow rate opt Percent of Threshold = (Emission rate / NR 445 Emission Threshold) \* 100

System flow variable due to freezing conditions at the influent lines starting 1/7/2013. System flow balanced by opening make-up air valve.

Interim system was shut down 4/29/2013. The permanent system was started 5/13/2013.

The initial permanent system sample was collected 5/14/2013 after system optimization.

The combined SVE and GETS system started operating 7/14/2015.

**Acronyms and Abbreviations:**

lb/yr = Pounds per year.

lb/hr = Pounds per hour.

µg/m<sup>3</sup> = Micrograms per cubic meter.

VC = Vinyl Chloride.

SVE = Soil vapor extraction.

GETS = Groundwater extraction and treatment system.

**Average Emission Rate =** -- **0.159**

**NR 445 Emission Threshold =** -- **830**

**General Notes:**

<sup>1</sup> = VOC concentration was based on the detected analyte concentration in post-carbon effluent samples for dates shown. When compound was not detected above the laboratory reporting limit, emissions were calculated using 1/2 the reporting limit.

<sup>2</sup> = Emission rates were determined using the following equation:

$$\text{Emission Rate} = \text{Conc.} * \text{Flow Rate} * 60 \text{ min/hr} * (1 \text{ m}^3/35.31 \text{ ft}^3) * (1 \text{ lb}/4.54 \times 10^8 \text{ µg}) * 24 \text{ hr/day} * 365 \text{ days/yr}$$

<sup>3</sup> = SVE system began operation on 3/9/2012.

<sup>4</sup> = Post-carbon emissions presented as a percentage of the threshold level using the following equation:

$$\text{Percent of Threshold} = (\text{Emission rate} / \text{NR 445 Emission Threshold}) * 100$$

<sup>5</sup> = System flow rate optimized 10/16/2012 by closing make-up air valve.

System flow variable due to freezing conditions at the influent lines starting 1/7/2013. System flow balanced by opening make-up air valve.

Interim system was shut down 4/29/2013. The permanent system was started 5/13/2013.

The initial permanent system sample was collected 5/14/2013 after system optimization.

The combined SVE and GETS system started operating 7/14/2015.

**Acronyms and Abbreviations:**

lb/hr = Pounds per year.

lb/hr = Pounds per hour.

µg/m<sup>3</sup> = Micrograms per cubic meter.

VC = Vinyl Chloride.

SVE = Soil vapor extraction.

GETS = Groundwater extraction and treatment system.
