Subject:

Soil Vapor Extraction (SVE) System Progress Report, September through October 2013, Madison-Kipp Corporation (MKC) Site, 201 Waubesa Street, Madison, Wisconsin.

Dear Ms. Hanefeld:

On behalf of Madison-Kipp Corporation (MKC), this progress report provides a summary of the soil vapor extraction (SVE) system monitoring as part of the MKC site located at 201 Waubesa Street in Madison, Wisconsin.

Tasks Completed – September 1, 2013 through October 31, 2013

The following tasks were completed during the period of September 1 through October 31, 2013 and are presented in chronological order. As requested by the Wisconsin Department of Natural Resources (WDNR), SVE system progress reports will be submitted to the WDNR every two months to document operation of the system.

During the reporting period, SVE system Operation, Maintenance and Monitoring (OM&M) was performed by ARCADIS and/or MKC personnel September 3, 10, 16, 23, 30, and October 15 and 28, 2013. All water generated during SVE maintenance activities was incorporated by Madison Kipp with the facility process water on site. Monthly SVE OM&M was performed by ARCADIS personnel September 10 and October 15, 2013. Laboratory analytical data collected during the monthly OM&M events is included in Table 1. Field data collected during the OM&M events is included in Table 2. The air emission tables are also included as Tables 3 through 7. A review of the air emission tables indicates the emissions rates are several orders of magnitude lower than the Wisconsin Administrative Code NR445 Emission Threshold Values.

Tasks In-Progress

The following tasks are scheduled to be completed from November 1 through December 31, 2013.

- Weekly and monthly SVE system OM&M activities.

If you have any questions or require any additional information, please contact us at 414.276.7742.

Sincerely,

Only detected constituents are noted. Constituent concentrations are reported as ppbv.

Between March 9 and October 16, 2012, the system operated with the dilution air valve 50 percent open to maintain system operation within maximum range of blower vacuum. On October 16, 2012, the blower was replaced and modified to allow more efficient system performance and operation with the dilution air valve fully closed.

Influent sampling began on 3/16/2012 to evaluate the effectiveness of carbon treatment.

System sampling occurred daily for the first three days of startup, weekly for the next three weeks, and monthly thereafter.

System flow and vacuum variable due to freezing conditions at the influent lines starting 1/7/2013. System flow balanced by opening make-up air valve.

Interim system was shut down 4/29/2013. The permanent SVE system was started 5/13/2013, no makeup air is required for system operation.

< Constituent not detected above noted laboratory detection limit.

-- Not monitored or sampled.

B Compound was found in the blank and sample.

Bold Constituent detected above laboratory detection limit.

J Constituent concentration is an approximate value.

Xylene, o-	<4	0.2	<3.9	<0.2	<3.4	<0.25

Only detected constituents are noted. Constituent concentrations are reported as ppbv.

Between March 9 and October 16, 2012, the system operated with the dilution air valve 50 percent open to maintain system operation within maximum range of blower vacuum. On October 16, 2012, the blower was replaced and modified to allow more efficient system performance and operation with the dilution air valve fully closed.

Influent sampling began on 3/16/2012 to evaluate the effectiveness of carbon treatment.

System sampling occurred daily for the first three days of startup, weekly for the next three weeks, and monthly thereafter.

System flow and vacuum variable due to freezing conditions at the influent lines starting 1/7/2013. System flow balanced by opening make-up air valve.

Interim system was shut down 4/29/2013. The permanent SVE system was started 5/13/2013, no makeup air is required for system operation.

< Constituent not detected above noted laboratory detection limit.

-- Not monitored or sampled.

B Compound was found in the blank and sample.

Bold Constituent detected above laboratory detection limit.

J Constituent concentration is an approximate value.

ppbv Parts per billion by volume.

Start system at 1:15 pm on March 9, 2012.

Vacuum measured with inline vacuum gauge in units of in Hg. Vacuum converted to in H₂O for comparison.

Extraction well flow rate measured with inline air flow meter.

VOCs measured with a PID (calibrated to 100 ppm isobutylene).

System flow and vacuum variable due to freezing conditions at the influent lines starting 1/7/2013. System flow balanced by opening make-up air valve.

Interim system was shut down 4/29/2013. The permanent SVE system was started 5/13/2013.

Initial permanent system readings recorded 5/14/2013 after optimization. No makeup air is required for system operation.

- 1 Vacuum measured at well head at 12:55 pm.
- 2 Vacuum measured at well head at 5:30 pm.
- 3 System restarted with make-up air valve open 100 percent to reduce backpressure on blower.
- 4 Make-up air valve closed to 50 percent open to continue operation of system consistent with previous settings.
- 5 Vacuum measured at well head indicates influence is still being achieved at this well.
- 6 PID results were analyzed from tedlar bag approximately four hours after collection due to instrument malfunction.
- 7 Gauge reading above calibrated range.
- 8 Influent flow inconsistent with previous readings.
- Not monitored.
- cfm Cubic feet per minute.
- in Hg Inches of mercury.
- in H₂O Inches of water column.
- NM Not measurable.
- PID Photoionization detector.
- ppm Parts per million.
- VOCs Volatile organic compounds reported as isobutylene.

 NR 445 Emission Threshold = **5.7** lb/hr

Footnotes on Page 2.

Table 3. Estimate of Post-Carbon Emissions, SVE System, Madison-Kipp Corporation, Madison, Wisconsin.

¹ Total VOC concentration was based on the sum of all detected analyte concentrations in post-carbon effluent samples for dates shown. When compounds are not detected above the laboratory reporting limit, emissions are calculated using 1/2 the reporting limit.

² Emission rates were determined using the following equation:

$$\text{Emission Rate} = \text{Conc.} * \text{Flow Rate} * 60 \text{ min/hr} * (1 \text{ m}^3/35.31 \text{ ft}^3) * (1 \text{ lb}/4.54 \times 10^8 \text{ } \mu\text{g})$$

³ SVE system began operation on 3/9/2012.

⁴ System was shut down between 3/24/2012 and 3/29/2012.

⁵ System was shut down between 10/13/2012 and 10/16/2012.

⁶ System was shut down between 11/13/2012 and 11/14/2012.

⁷ System flow rate optimized 10/16/2012 by closing make-up air valve.

System flow variable due to freezing conditions at the influent lines starting 1/7/2013. System flow balanced by opening make-up air valve.

Interim system was shut down 4/29/2013. The permanent system was started 5/13/2013.

The initial permanent system sample was collected 5/14/2013 after system optimization.

No makeup air is required for permanent system operation.

cfm	Cubic feet per minute.
lb/hr	Pounds per hour.
$\mu\text{g}/\text{m}^3$	Micrograms per cubic meter.
VOC	Volatile organic compound.

$$\text{Percent of Threshold} = (\text{Emission rate} / \text{NR 445 Emission Threshold}) * 100$$

⁶ System was shut down between 10/13/2012 and 10/16/2012.

⁷ System was shut down between 11/13/2012 and 11/14/2012.

⁸ System flow rate optimized 10/16/12 by closing make-up air valve.

System flow variable due to freezing conditions at the influent lines starting 1/7/2013. System flow balanced by opening make-up air valve.

Interim system was shut down 4/29/2013. The permanent system was started 5/13/2013.

The initial permanent system sample was collected 5/14/2013 after system optimization.

No makeup air is required for permanent system operation.

lb/hr	Pounds per hour.
$\mu\text{g}/\text{m}^3$	Micrograms per cubic meter.
TCE	Trichloroethene.

Table 6. Estimate of Post-Carbon Emissions of Cis-1,2-Dichloroethene, SVE System, Madison-Kipp Corporation, Madison, Wisconsin.

Date	Total cis-1,2-DCE Concentration ¹	System Flow Rate	Emission Rate ²	Percent of NR 445 Emission Threshold ⁵
	µg/m ³	cfm	lb/hr	%
3/9/2012 ³	0.14	450	--	--

Average Emission Rate = 2.73E-04 lb/hr

NR 445 Emission Threshold = 166 lb/hr

Footnotes on Page 2.

Table 6. Estimate of Post-Carbon Emissions of Cis-1,2-Dichloroethene, SVE System, Madison-Kipp Corporation, Madison, Wisconsin.

¹ VOC concentration was based on the detected analyte concentration in post-carbon effluent samples for dates shown. When compound was not detected above the laboratory reporting limit, emissions were calculated using 1/2 the reporting limit.

² Emission rates were determined using the following equation:

$$\text{Emission Rate} = \text{Conc.} * \text{Flow Rate} * 60 \text{ min/hr} * (1 \text{ m}^3/35.31 \text{ ft}^3) * (1 \text{ lb}/4.54 \times 10^8 \text{ } \mu\text{g})$$

³ SVE system began operation on 3/9/2012.

⁴ System was shut down between 3/24/2012 and 3/29/2012.

⁵ Post-carbon emissions presented as a percentage of the threshold level using the following equation:

$$\text{Percent of Threshold} = (\text{Emission rate} / \text{NR 445 Emission Threshold}) * 100$$

⁶ System was shut down between 10/13/2012 and 10/16/2012.

⁷ System was shut down between 11/13/2012 and 11/14/2012.

⁸ System flow rate optimized 10/16/2012 by closing make-up air valve.

System flow variable due to freezing conditions at the influent lines starting 1/7/2013. System flow balanced by opening make-up air valve.

Interim system was shut down 4/29/2013. The permanent system was started 5/13/2013.

The initial permanent system sample was collected 5/14/2013 after system optimization.

No makeup air is required for permanent system operation.
