This photo of a bobcat was taken in early November 2013 in Dane county, Wisconsin. Bobcats have short ear tuffs, moderate cheek ruffs, small feet and a dark tip and white underside of a short tail. Starting in 2014, a regulated harvest of bobcats will occur statewide.

This booklet gives you a summary of Wisconsin’s most important trapping laws and how they affect you. It is not a complete set of laws.

Regulations specific to wolf hunting and trapping can be found in the 2014 Wolf Hunting and Trapping Regulations. Updates and additional information pertaining to wolf trapping are available at dnr.wi.gov keyword “wolf”.

Support Ethical Responsible Trapping • Report Violations

CALL: 1 (800) TIP-WDNR (1-800-847-9367; toll free), (608) 267-4023 or #367 from your U.S. Cellular phone. Note: this is not an information number.

TEXT: Text a tip to TIP-411 (847-411). Available from 7 a.m. - 10 p.m.
  Standard text rates apply.

EMAIL: LE.hotline@wisconsin.gov
Dear Trappers,

Thanks for your interest, support and commitment to regulated trapping in Wisconsin. The combination of Wisconsin’s diverse natural resources and the cooperation and responsible actions of all citizens has allowed for a continued, regulated, sustainable harvest of several furbearer species. With the 2014-15 seasons we have additional opportunities and/or changes highlighted under the “What’s New in 2014” section immediately below. One significant change worth highlighting is the expansion of regulated harvest of bobcats in southern Wisconsin. Through collaborative research efforts of our universities and the department, we have a better understanding of the presence, density and habitat use of southern bobcats. With support from the public and user groups we can now move forward with this new opportunity. And through the Wisconsin Cooperative Trapper Education Program dedicated trappers will continue to instruct new participants about the ethical, respectful, lawful use of such renewable resources.

Have a great time out there! Learn new skills, respect other’s needs and take a friend or family member with you. Through your responsible actions, non-trappers will have a greater appreciation of what makes an ethical trapper one of the finest naturalists in our region. Prior to, during and after the trapping season, act as if the future of trapping depends on your actions – because it does! Have a safe, productive and memorable season.

John F. Olson
Furbearer Specialist

What’s New in 2014

• Harvest of fisher and otter must now be reported within 24-hours, registration is still required. See page 15 for details.

• Weasel boxes may now be checked once every 4-days if the enclosure meets certain trap requirements. See page 9 for details.

• The muskrat and mink season dates and zones have changed. See page 22 for details.

• The bobcat zone has been expanded to include a Northern Zone and Southern Zone and both include two trapping periods. See page 20 for details.

• The collection of willow stakes from DNR managed lands is now allowed, with certain restrictions, providing the land manager’s permission is obtained. See page 16 for details.

Please Contact the DNR About Incidental Take!

The scientific use of these carcasses and sale of salvaged pelts improves our understanding of these species and improves our trapper education program.

If incidental catch of a protected species occurs, please contact your local conservation warden or call 1 (800) TIP-WDNR (1-800-847-9367) as soon as possible for instructions on how to release an animal or, if dead, how to transport it to the department. A protected species is any species for which the season is closed, there is no open season or a person has no authority to possess.

Note: American marten are rare and a state endangered species. Please call 1 (800) 847-9367 to report the restraint and release or incidental take as soon as possible. If you catch a marten in a cage trap, please call (715) 365-8856 so department staff can potentially obtain scientific information about that animal. If you intend to trap near a known marten population please review the marten brochure at dnr.wi.gov keywords “marten avoidance.”
Definitions

**Body-Grip Trap:** a steel trap designed to allow the animal’s head, neck or torso to enter the trap opening and be held by compression of the jaws when sprung.

**Cable Restraint:** a cable noose used for restraining furbearing animals which does not allow the device or trapped animal to reach unfrozen water.

**Cage or Box Trap:** a trap that is designed to allow an animal to enter the trap enclosure, be captured and remain alive inside the cage or box-type enclosure until it can be released unharmed or reduced to possession by the operator of the trap. This trap may not be used as a water set or with any other type of trap.

**Capable of Drowning:** a set designed to allow the trapped animal to travel to water of sufficient depth to cause drowning. Slide wires or poles, locking devices, slip chains, weighted traps and traps staked in deep water are commonly used in drowning sets.

**Colony Trap:** an enclosure-type device that allows for the capture of one or more furbearing animals in a single setting as a drowning set. See size and placement restrictions on page 14.

**Dry Set:** a trap set or staked to be completely on dry land with no possibility of the trap or trapped animal reaching unfrozen water.

**Enclosed Trigger Trap:** any trap with a pull-activated trigger located inside an enclosure and recessed 1¼ inches or more from an opening that is no greater than 1¾ inches in diameter. The diameter of the opening is measured as the straight line distance across the opening between the two inside points of the opening which are furthest apart. If the opening is square or rectangular, this measurement must be made from the two opposite corners that are furthest apart.

**Furbearing Animal:** for the purpose of this pamphlet means bobcat, fisher, otter, coyote, raccoon, red fox, gray fox, mink, muskrat, beaver, skunk, weasel and opossum.

**Sight Exposed Bait:** any bait which can be seen from above.

**Snare:** a wire noose used for restraining furbearing animals in a water set.

**Steel-jawed Trap:** a trap constructed of metal and is designed to catch an animal by the foot, but does not include enclosed trigger traps or body gripping traps.

**Water Set:** a trap or snare which is set or staked in a manner to permit the trap, snare or trapped animal to reach unfrozen water.

**Animals Protected at All Times**

The following wild animals are designated protected and have no open season: badger, Canada lynx, cougar, flying squirrel, moose, American marten, white or albino deer, woodchuck, wolverine and any other species designated protected, endangered or threatened.
Special Rule Clarifications

Trapping Along Roadside: permission to trap road right-of-ways can be a complex issue. Highway right-of-ways are established to provide areas for vehicle and sometimes pedestrian travel and not for the purpose of trapping. Most are owned by either the state or the local unit of government; however in some cases the adjoining landowner still maintains ownership of the underlying land. Trappers must have permission from the owner of the land underlying any public road, street or highway right-of-way areas before trapping these locations.

Trapping Navigable Waterways: trapping on private land in Wisconsin, including on the beds of navigable waters, may constitute a trespass (enforced by the county sheriff’s department). Trappers need to obtain permission before trapping on any private land, even if entry is by public waterways and the trap is placed or staked in the water.

Preseason Marking of Trap Sites: using stakes or other devices to mark a trap site anywhere prior to the season opener is not allowed on DNR managed lands and is not recommended on other public lands. It does not legally reserve the site for the person placing the stake or markers.

Unprotected Species: opossums, skunks, porcupines and weasels are unprotected and may be trapped year-round by persons possessing a trapping license. A trapping license is not required for landowners or occupants trapping unprotected species causing damage or which are otherwise a nuisance.

Wildlife Violator Compact

The State of Wisconsin is a participating member of the Wildlife Violator Compact. The Wildlife Violator Compact is an agreement between participating states that prohibits a person whose hunting, trapping or fishing privileges are suspended in one state from obtaining licenses and permits or participating in those activities in another state.

If your hunting, trapping or fishing privileges are suspended or revoked for a fish or wildlife related violation by any of the member states, you may not engage in those activities in Wisconsin or purchase any license, permit or tag that authorizes those activities in Wisconsin during the period of the revocation or suspension.

If a person is cited for a wildlife violation in Wisconsin and fails to pay or appear in court, Wisconsin will revoke all that person’s hunting, trapping and fishing privileges and will communicate that information to that person’s home state for purposes of revocation.

Participating states include: AK, AL, AZ, CA, CO, FL, GA, IA, ID, IL, IN, KS, KY, LA, MD, MI, MN, MO, MS, MT, ND, NM, NV, NY, OH, OK, OR, PA, SC, SD, TN, TX, UT, VA, WA, WI, WV and WY.  

Note: additional states may have joined the compact since the printing of this pamphlet.
License and Permit Information

1. **Resident:** $20; **Non-resident** $150; **Youth trapping** (under 16 years of age): $10. Reduced rates are available for **first time licenses buyers**, visit [dnr.wi.gov](http://dnr.wi.gov) keyword “license” for more information.

   • Wisconsin allows trapping by non-resident U.S. citizens from those states that allow Wisconsin residents to purchase non-resident licenses and trap in that state; this includes all states except Hawaii, Minnesota and Washington D.C. Non-resident licenses require the successful completion of the Wisconsin trapper education course (see pages 28 – 31) or a comparable, as determined by the Wisconsin DNR, trapper education course from another state or province. Currently, in-person courses from AL, CT, ID, IL, KS, MA, MD, ME, MI, MN, MT, ND, PA (“successful furtaking” course), SC, TN, VA and VT are accepted as comparable. Non-resident trappers are subject to all seasons and regulations that pertain to the state of Wisconsin. **Trapping licenses for the 2014 – 15 license year expire on March 31, 2015.**

2. **Age:** no age restrictions apply to trapping, but age and mentoring or accompanying requirements apply if a firearm is to be used while trapping; for more information, visit [dnr.wi.gov](http://dnr.wi.gov) keywords “mentored hunting”. All trappers must obtain a trapping license regardless of age. A minimum age of 10 years is recommended for successful completion of a Trapper Education program. All first time trappers must complete the Wisconsin trapper education course (page 28) prior to purchasing a license. A certificate of successful completion of the Wisconsin trapper education course may be used by a resident in place of a trapping license for the trapping license year in which the certificate is issued. A **bobcat, fisher or otter permit and tag are still required. The successful completion of a Wisconsin trapper education course may not be used in place of a wolf harvesting license.**

3. **You may not:**
   • transfer your license, permit or tag or allow its use by anyone else except as provided on page 15;
   • carry any trapping license, permit or tag issued to anyone else, or;
   • obtain a trapping license, permit or tag for someone else except a parent may purchase a license for their minor child/children.

4. **Landowner Provisions:** the owner or occupant of any land and any family members* who live with them do not need a license to:
   • trap coyote, beaver, fox, raccoon, woodchuck, rabbit and squirrel on the land year-round (see “beaver damage control” on page 18 for more information), or;
   • live trap with cage or box traps for beaver, coyote, fox, woodchuck, rabbit, raccoon and squirrel on their land at any time in cities, villages or other areas where the discharge of firearms is unlawful. Live-trapped animals must be either humanely killed or released on unenclosed private land with the landowner’s permission within 24 hours.

   **Note:** live-trapped animals cannot be released on DNR owned and managed lands.

*Family members who do not live with the owner or occupant of the land but are siblings and/or children of the owner and are under the age of 18 may also hunt or trap these species on that property without a license.
5. **Duplicates:** you can acquire a duplicate trapping license at any license outlet with your personal identification and, preferably, your DNR customer number. Duplicate trapper education certificates are also available by calling (608) 261-6452.

6. **Purchasing Fur:** you must possess a fur dealers license or a taxidermist permit to purchase raw fur (defined on page 14); except you may obtain written authorization from the DNR to purchase raw fur without the need to purchase a license if only for the purpose of making garments for yourself or a member of your family.

7. **Animals Causing Damage:** during the closed season, a DNR permit may be required to remove nuisance animals. Call the DNR call center at 1 (888) 936-7463 for more information.

8. **Horicon National Wildlife Refuge and Horicon Marsh State Wildlife Area:** trapping at these locations is authorized on a permit system only and special regulations apply. Permit details are available through:

<table>

9. **Upper Mississippi River National Wildlife and Fish Refuge:** special trapping permits are required. For more information contact: Upper Mississippi River National Wildlife and Fish Refuge Headquarters, 51 E. 4th Street, Winona, MN 55987; (507) 452-4232.

10. **Apostle Islands National Lakeshore:** access permits are required for the Apostle Islands National Lakeshore. For information: call (715) 779-3397 or write Park Superintendent, 415 Washington Avenue, Bayfield, WI 54814.

11. **Trempealeau National Wildlife Refuge:** trapping is authorized on a permit system only and special regulations apply. For more information: call (608) 539-2311 ext. 16 or visit [www.fws.gov/midwest/trempealeau](http://www.fws.gov/midwest/trempealeau) or write Trempealeau National Wildlife Refuge, W28488 Refuge Road, Trempealeau, WI 54661.

12. **Necedah National Wildlife Refuge:** trapping is authorized on a permit system only and special regulations apply. For more information: call (608) 565-2551 or write Necedah National Wildlife Refuge N11385 Headquarters Road, Necedah WI 54660.

13. **St. Croix National Scenic Riverway:** trapping is restricted in the St. Croix National Scenic Riverway. For more information: visit [www.nps.gov/sacn/planyourvisit/trapping.htm](http://www.nps.gov/sacn/planyourvisit/trapping.htm). The National Park Service has specific regulations on these sites to inform the public of special Federal regulations already in place.
Mississippi River Zone

For 2014, the muskrat and mink seasons in the Mississippi River zone opens on November 10. However, if the duck season closes prior to November 10, the trapping season will begin the day following the end of the duck hunting season.

On lands located within the Mississippi River zone and managed by the U.S. Fish & Wildlife Service (USFWS) as part of the Upper Mississippi River National Wildlife and Fish Refuge (UMRNWFR), the otter, raccoon, coyote and fox seasons open with the muskrat and mink seasons. The beaver season dates are not affected, but otter trapping on refuge lands ends March 15 when all trapping on the refuge closes. Trapping on federal lands within the Mississippi River zone involves obtaining a Refuge Trapping Permit issued by the USFWS and restrictions on number of traps allowed, trap placement, time of the trapping opener and trap check hours. To obtain Refuge Trapping Permits, contact the UMRNWFR (see page 7).

On private lands within the Mississippi River zone, the trapping seasons for raccoon, coyote and fox are the same as the regular state season dates (see page 21).

The success of this season framework rests with the trapping and hunting community. If seasons overlap, trappers can minimize contact with waterfowl hunters by setting and checking traps on weekdays, checking traps during mid-day, pulling trap lines prior to the weekend, asking hunters for permission to check traps in areas where hunters are set up and approaching areas with hunters only when ducks are not flying. Duck hunters can help by being aware of trapper presence and encouraging mid-day trap checks.

Trappers, please take special care when trapping on uplands. We recommend you consider refraining from placing upland sets until after the close of the duck season.

There are many who use and enjoy the amazing resources of the Mississippi River. Please remain courteous and accommodate each other’s needs.

Use of Trail Cameras on Department-Managed Lands

The placement and unattended, overnight use of trail cameras is authorized on department lands only under the following conditions:

1. placement only occurs during open hunting seasons in areas where hunting is allowed and outside of designated special use zones (such as designated hiking trails, beaches and buildings);
2. trail cameras bear the name and address or department issued customer identification number of the owner or operator permanently attached or engraved to the outside of the camera so that it is clearly visible without the need to move or adjust the camera;
3. cameras may not cause damage to natural vegetation or other department property, and;
4. the placement of trail cameras on department managed lands is done at your own risk. The department will not be responsible for theft or damage of trail cameras on department managed lands.
Trap Checking Requirements

**Dry Set:** dry sets must be attended and checked in-person at least once each day and any captured animals must be removed from the set, except that weasel boxes may be checked every four days given that:

1. the entrance hole is no greater than 1 3/8 inches in diameter;
2. the enclosure set must use a bodygrip trap (for weasels this includes a foothold trap and rat trap), and;
3. the enclosure is securely anchored to an immovable object.

**Water set:** water sets, except drowning sets, must be attended and checked at least once each day and any captured animals must be removed from the set.

**Drowning Set:** sets capable of drowning must be attended and checked within a 4-day period following the last tending of the set. Any captured animals must be removed from the set unless it is an under ice set. You must monitor water levels to ensure effective drowning sets.

**Under Ice Set:** there are no mandated trap checking periods for sets made under the ice.

Trapping Hours

Legal trapping hours are from 4:00 a.m. to 8:00 p.m. provided the season is open. See page 16 for information about trapping hours in state parks.

Trap Size and and Placement Restrictions

**You may not:**

- set, place or operate any water set traps with a jaw spread smaller than 5½ inches for steel-jawed traps or body-grip traps that are 60 square inches or less, except when the muskrat or mink season is open in the zone in which you are trapping;
- set, place or operate more than 3 ft. above the ground any trap or device designed or used to capture or kill birds;
- use sight exposed bait consisting of feathers, animal flesh, fur, hide or entrails within 25 ft. of any trap, snare or cable restraint;
- operate trap sets which permit the trapped animal to reach water except when the muskrat, mink, beaver or otter trapping season is open in the zone you are trapping or unless using a commercially manufactured enclosed trigger trap;
- set a trap, cable restraint or snare other than a commercially manufactured enclosed trigger trap closer than 15 ft. from any beaver dam (landowners see “beaver damage control” on page 18);
- set, place or operate any body-grip trap that is 75 square inches or larger unless ½ of the trap is located underwater at all times;
- set, place or operate any body-grip trap greater than 60 square inches or any snare or cable restraint, regardless of the size of the noose, in the following locations:
  - within 3 ft. of any federal, state or county road right-of-way culvert unless completely submerged in water;
  - within three feet of any woven or welded wire fence, or;
  - within 100 yards of any building devoted to human occupancy without the owner’s consent.
• set, place or operate any steel-jawed trap with teeth unless such traps are located completely underwater at all times;
• set, place or operate any steel-jawed trap with a jaw spread width of more than 7 inches from Oct. 15 – Nov. 30 unless it is a water set or with a jaw spread width of more than 8 inches at any other time or as a water set;
• set, place or operate any snare, regardless of the noose size, unless ½ of the snare noose is located underwater at all times, and;
• set, place or operate any snare unless the noose cable and noose attachments conform to the following specifications:
  – the cable length may not exceed 5 ft.;
  – the cable must be galvanized aircraft cable;
  – the cable or wire diameter may not exceed ⅛ inch, and;
  – it must be non-spring activated.

Consider all set placement to avoid contact with humans and domestic animals. When using body-grip traps on dry land, the use of enclosures and elevated sets is strongly encouraged. The ability to continue to use body-grip traps in the future depends on responsible use now!

Methods

All live furbearing animals taken during the open season for such species shall be released unharmed or killed immediately and made part of the daily bag. It is unlawful to keep such animals alive after their capture unless you have first obtained a DNR permit, license or authorization to possess the animal alive.

Note: a trapping license does not allow the possession of live wild animals obtained by trapping and a captive wild animal farm license does not allow trapping or possession of live animals trapped from the wild.

You may not:

• operate any trap or device designed, built or used to capture birds on a pole, post, tree stump or any other elevated perch more than three feet above the ground. Elevated traps are legal for furbearing animals as long as the sight exposed bait law is followed (see page 11 for body-grip trap regulations);
• place any set or sprung trap, snare, cable restraint, bait or scent for furbearing animals during the closed season;
• set any trap, which includes cable restraints and snares for which a trapping license is required, unless a metal tag is attached. The tag must be stamped or engraved legibly with the name and address of the operator or their customer ID number. Heavy-duty stamped tags are recommended;
• take or attempt to take beaver, fisher, mink, muskrat or otter by any means other than trapping or snaring;
  Note: landowners, occupants or their family members who are at least 10 years of age and live with the landowner or occupant may take beaver by firearm on their land (hunting mentorship program rules apply, see 2014 Wisconsin Small Game Regulations for details or visit dnr.wi.gov keywords “mentored hunting”);
• possess any trap for the purpose of catching furbearing animals other than a steel-jawed trap, cage/box trap, enclosed trigger trap, body-grip trap, cable restraint, snare or colony trap. Cage or box traps shall be constructed so that no additional animals may enter the trap after an animal has been captured.
until that animal is removed and the trap reset;  
• disturb or molest any mink den, muskrat house, muskrat feeding house or beaver dam (see page 18 for landowner exception for beaver dams);  
• place on the ice any artificial house or den for the purpose of catching any fur-bearing animal, or;  
• molest or take traps, cable restraints, snares or trapped animals that belong to someone else. See page 12 for more information.

Body-Grip Trap Regulations

No person may set, place or operate any body-grip trap greater than 60 but less than 75 square inches, measured from the widest points on the outside of the jaws (Figure 1) as a:

• water set unless at least ½ of the set trap is located underwater at all times;  
• elevated set unless the trap is placed at least 5 ft. above the surface*;  
• bottom entry enclosure set, unless the entire opening of the enclosure is no more than 7 inches above the surface*;  
• baited and/or scented set in or on the ground unless the trap trigger is within an enclosure with openings no greater than 50 square inches for a 7 inch recess or an opening of 8 inches high by 10 inches wide with a 10 inch minimum recess from the enclosure openings, or;  
• unbaited and/or unscented trail set unless the trap is within an enclosure that provides openings no greater than 10 inches high and 10 inches wide and is recessed a minimum of 15 inches from the enclosure openings.

* Surface is the first surface which is ground, ice, crusted or packed snow or any other hard material beneath the trap or opening.

For the purposes of this section, “enclosure” means any single unit device that creates a barrier to the trap allowing entry only through designated openings.

To set, place or operate any body-grip trap that is 60 square inches or less in size, it must have a maximum vertical jaw measurement of 7½ inches when set. The vertical measurement is taken from the widest points on the trap in the set position (Figure 2).

<table>
<thead>

</table>

Figure 1. To determine the maximum square inches of an unset trap, multiply the maximum width of the trap jaws (A) by the height of the trap jaws (B). Body-grip trap designs vary.

Figure 2. An example of how to measure the vertical height measurement of a trap when set.
Cable Restraint Regulations

You may not:

• set, place or operate cable restraints for any species other than fox, coyote, wolf and bobcat. See the 2014 Wolf Hunting and Trapping Regulations for additional information on the wolf hunting and trapping season;

• set out or place a cable restraint, whether set or sprung, on public or private land, except during the following dates:

• use cable restraints for removal of nuisance wildlife except for coyote and fox during the dates listed above;

• stake a cable restraint in a manner that allows the restraint device to reach any part of a fence, rooted woody vegetation greater than ½ inch diameter or any other immovable object or stake that could cause entanglement;

• set, place or operate any cable restraint with the bottom of the loop less than 6 inches or greater than 12 inches above the first surface beneath the bottom of the set cable restraint loop (Figure 3), where the surface is ground, ice, crusted or packed snow or any other hard surface, or;

• set, place or operate any cable restraint unless the noose cable and noose attachments conform to the following specifications:
  – the cable length may not exceed 7 ft.;
  – the cable must be galvanized aircraft cable and include a swivel;
  – it must be non-spring activated;
  – cable must be made of multiple strands of wire, with a diameter of 3/32 inches or larger;
  – include a breakaway device or stop rated at 285 lbs. or less;
  – include a relaxing reverse-bend washer lock with a minimum outside diameter of 1¼ inches, and;
  – include cable stops affixed to the cable to ensure that the portion of the cable that makes up the noose loop may not be longer than 38 inches when fully open or less than eight inches when fully closed (Figure 4).

Trap and Animal Theft

Stealing or molesting traps, cable restraints, snares, animals or the contents of any lawfully placed trap, cable restraint or snare is a criminal act and is punishable by fine ($300-$1,000), imprisonment (up to 90 days) or both and a mandatory 5-year revocation of license.
Figure 3. Loop heights and size varies depending on the intended species; coyote, bobcat or fox. Multiple swivels are recommended on a cable restraint, however only a single swivel is required.

Figure 4. The maximum and minimum loop size for cable restraints is easily measured by circumference. The minimum loop stop is set at 8 inches and the maximum loop stop is set at 38 inches from the reverse-bend washer end of the cable. This results in a loop no smaller that 2½ inches in diameter nor larger than 12 inches in diameter.
**Colony Traps**

Colony traps, enclosure-type devices that allow for the capture of one or more animals in a single set, are only legal to use for trapping muskrat. Mink that are incidentally captured in colony traps placed for muskrats can be retained.

**You may not:**
- set, place or operate a colony trap with a length exceeding 36 inches or with a height or width exceeding 6 inches. If using a round (tube-shaped) trap, the diameter cannot exceed 6 inches;
- set, place or operate a colony trap within 3 ft. of any culvert;
- place bait, including scent, in the trap or at the set location;
- set, place or operate a colony trap that is not completely underwater, or;
- use a colony trap in conjunction with any fencing, netting or other material placed in the water (including other colony traps) that create an underwater obstruction designed to force or channel any wild animal into the trap.

**Possession Restrictions**

**Definitions**

**Raw fur:** the undressed or untanned skins or pelts of any furbearing animal, including ones that have been stretched and dried.

**Green pelts:** a skin that has not been removed from the carcass or the pelt of any furbearing animal that has been removed, but has not been tanned or fleshed, stretched and dried.

**You may not:**
- possess the green pelts of any bobcat, fisher or otter beginning on the 6th day after the season closes unless the pelt has a valid registration tag attached;
- possess any mink, muskrat, fisher or otter pelt that has been shot or speared;
- possess any raw fisher, mink, muskrat or otter pelt at any time without a current trapping or fur dealer’s license or other appropriate special license or permit issued by the DNR;
- ship fur unless the outside of the container is marked with the number and type of species being shipped and the name, address and trapping license number of the shipper;
- transfer to another, give, trade, sell or purchase a raw pelt or unskinned carcass of any bobcat, fisher or otter pelt without a registration tag being attached and locked to the head portion of the pelt by the department, or;
- purchase any raw fur without a fur dealers license; except you may obtain written authorization from the DNR to purchase raw fur without the need to purchase a license if only for the purpose of making garments for yourself or a member of your family.

**Special Regulations: Bobcat, Fisher and Otter**

**Permits and Tags**

Permit applications can be submitted by visiting any license sales location, online at [dnr.wi.gov](http://dnr.wi.gov) or by phone at 1 (877) WI-LICENSE (1-877-945-4236). Trappers can submit their application choices for bobcat, otter and fisher at the same time they pay the application fee (see page 15 for application fees) for each species.

Applicants have the option of applying for a preference point only or to be entered into the drawing for a permit(s). If an applicant makes the choice to be entered into the drawing and is selected for a permit the applicant will lose all preference points, even if the permit is not used.

Applicants who fail to apply for either a preference point or a permit at least once during any 3 consecutive years will lose all previously accumulated preference points. **Note:** Conservation Patron license holders who did not submit their application choices for otter and fisher at the time they purchased their license must apply online or through a DNR service center.
The deadline to submit application choices for bobcat, fisher and otter permits is **Aug. 1, 2014**. Applicants who apply for a bobcat permit must choose one of the two bobcat time periods and either apply for the northern or southern bobcat harvest zone.

### Application Fees

* Patron License holders still need to register their application choices.

### Transfer of Bobcat, Fisher or Otter Permits to Youth

A person who has been issued a bobcat, fisher or otter permit may apply to transfer that permit to a youth under the age of 18 no later than 15 days before the open season. The youth receiving the permit will retain their accumulated preference points. A youth may only be the recipient of each type of transferred permit once. If you wish to transfer your permit please contact the DNR call center at 1 (888) 936-7463 for more information.

**You may not:**

- possess or have under control any bobcat, fisher or otter carcass unless you immediately validate, attach and seal your pelt tag through the opening of the animal’s mouth to the opening of its eye, immediately beneath the skin (see instructions on the pelt tag for further details). The pelt and DNR registration tags shall remain attached to the pelt until removed by a fur dresser or taxidermist at time of preparation;
- possess, loan or borrow a license or pelt tag belonging to another, or;
- place your tag on a bobcat, fisher or otter which has been caught, trapped or killed by another person (includes those caught in traps set by another person).

**Note:** a person is not allowed to tag a bobcat, fisher, otter or wolf that was intentionally or accidentally caught in a trap set by another person. A person who tags a trapped bobcat, fisher, otter or wolf must be the person who made the trap set.

### Harvest Reporting

In addition to exhibiting your bobcat, fisher or otter for registration and tagging, you must notify the DNR **within 24 hours** of harvesting a bobcat, fisher or otter by calling 1 (800) 994-6673.

**You may not:**

- transfer, give, trade, sell or purchase any bobcat, fisher or otter pelt unless an authorized DNR representative has attached a registration tag to the pelt, or;
- possess bobcat, fisher or otter pelts longer than 5 days after the month of harvest without registering the pelt(s) with an authorized DNR representative.

---

### Bobcat, Fisher and Otter Registration

Before registering a bobcat, fisher or otter pelt at a designated DNR registration station, you must skin the animal and separate the pelt from the carcass. The only exception is for specimens going to a taxidermist; you must retrieve the carcass from the taxidermist and deliver it to the DNR within 30 days of registration. There is no requirement that bobcat, fisher or otter be registered in the zone of harvest. All bobcat, fisher and otter must be registered by a Conservation Warden or other authorized DNR personnel. Visit [dnr.wi.gov](http://dnr.wi.gov) keyword “trap” or call 1 (888) 936-7463 for fur tagging dates, times and locations.

**Carcass collection for 2014-15:** the DNR will collect bobcat carcasses and fisher skulls statewide. The DNR retains the carcasses for important species management and research purposes.
Trapping in State Parks

Trapping is allowed in all state parks except Copper Culture, Cross Plains, Governor Nelson, Heritage Hill, Lakeshore and Lost Dauphin state parks, Hank Aaron state trail, Fischer Creek state recreation area, Havenwoods state forest and Lapham Peak and Pike Lake units of the Kettle Moraine state forest. A state park sticker or pass is required for all vehicles in any state park. Trappers may enter a state park or state trail property up to one hour before trapping hours and remain on the property until 11 p.m., however, it remains illegal to set or tend traps before 4 a.m. or after 8 p.m. Trapping is only allowed for species when their season is open and only during either of the following time periods: Nov. 15 – Dec. 15, 2014 and April 1 – May 5, 2015.

It is illegal to:

• use traps that are not placed completely under water unless the traps are enclosed trigger traps;
• set, place or check traps past 8 p.m., remain on the property past 11 p.m. or enter the property prior to 3 a.m. for the purpose of trapping when legal trapping hours begin at 4 a.m.;
  
  Note: trappers who are registered campers staying in a designated campsite are not required to leave the campgrounds, but may not use other areas of the park after 11 p.m.

• set, place or check traps located within 100 yards of designated trails or designated use areas such as picnic areas, campgrounds and beaches or in any area in the park closed to trapping indicated on that park’s trapping area map, or;
• trap during the closed season for any species.

For more information on regulations specific to state parks and maps of areas open to trapping within individual parks, visit dnr.wi.gov keywords “hunting state parks”.

Help Support Trapper Education

The sale of fur from incidentally taken carcasses is used to support the trapper education program and educate new trappers. If you trap an animal for which you do not have a permit, please call 1-800-TIP-WDNR (1-800-847-9367) for instructions on how to transport the carcass to the DNR.

Trapping on DNR Owned and Managed Lands

No person may destroy, molest, deface, remove or attempt to remove any natural growth or natural or archaeological feature except that edible fruits, edible nuts, wild mushrooms, wild asparagus and watercress may be removed by hand without a permit only for the purpose of personal consumption by the collector.

Additionally, willow stems not larger than 2 ½ inches in diameter, from species that are not endangered or threatened, may be collected for personal noncommercial use by the collector for purposes such as trap stakes, after first obtaining the property manager’s approval.
Marten Restoration Areas Open to Form of Dryland Trapping

In the areas indicated in grey on these maps, cable restraints and cage or box-type traps may be used on dryland for species that have an open season. No other traps on dryland are legal.
Beaver

Season Limits
No bag limit statewide.

Season Dates
Zone A: Nov. 1 – April 30, 2015
Zone B: Nov. 1 – April 30, 2015
Zone C: Nov. 1 – March 31, 2015
Zone D: Day after duck season closes to March 15, 2015.

Beaver Damage Control
Landowners, occupants and family members living with them may hunt or trap beaver on their land at anytime without a license and may remove beaver dams without a permit. Landowners may also trap on beaver dams. If beaver are taken by firearm, the landowner, occupant or family member harvesting the beaver must be at least 10 years old and comply with firearm possession and hunting mentorship program restrictions (see the 2014 Small Game Regulations). See DNR publication WM-007, or contact the DNR call center at 1 (888) 936-7463 for more information.

Beaver Management Zones
**Fisher**

**Permit Application Deadline: August 1**

**Season Limits**
Special zones (A, B, C, D, E and F) *only* by permit(s).
Season limit one fisher per permit.

**Season Dates**
All zones Oct. 18 – Dec. 31

*Note:* zones may be closed before the listed date if the harvest quota is reached early. Check with the DNR call center at 1 (888) 936-7463 for information on early closures.

**Carcass Collection**
In 2014–2015, fisher skulls will be collected at the time of registration.

**Fisher Management Zones**
Bobcat

Permit Application Deadline: August 1

Season Limits
Hunting and trapping only allowed by permit. One bobcat per permit.

Season Dates
Statewide
   Period 1: Oct. 18 – Dec. 25

Note: either period may be closed before the listed date if the harvest quota is reached early. Check with the DNR call center at 1 (888) 936-7463 for information on early closures.

Cable restraints

Carass Collection
During the 2014-2015 season, bobcat carcasses must be submitted statewide at the time of registration.

Canada lynx, a rare visitor to Wisconsin, are listed as a threatened species by the U.S. Fish and Wildlife Service. Please help us protect this unique animal through your careful observation. See illustrations below and if you observe a Canada lynx contact the DNR Call Center at 1 (888) 936-7463 immediately.

Lynx are distinguished from bobcat primarily by the tip of their tail, which is completely black. Only the upper half of the tail tip is black on the bobcat. Lynx also have larger ear tufts, are lighter in coloration, have large densely furred feet and less distinct tracks than bobcat.
Coyote, Raccoon, Red and Gray Fox

Season Limits
No bag limit statewide.

Season Dates
The following season dates are valid statewide:

- **Non-resident raccoon**: Nov. 1 – Feb. 15, 2015
- **Coyote**: Oct. 18 – Feb. 15, 2015

Cable restraints
Cable restraints may be used statewide during these dates:

Horicon National Wildlife Refuge and Horicon Marsh State Wildlife Area
Trapping at these locations is authorized on a permit system only and special regulations apply. See page 7 for more information.

Mississippi River Zone
See page 22 for a map of the Mississippi River zone.

Federal Lands: on federal lands within the Mississippi River zone (see page 8), the coyote, raccoon and fox seasons do not open until the muskrat and mink seasons open.

Private Lands: on private lands within the Mississippi River zone, the coyote, raccoon and fox seasons open as listed in the “season dates” section above.

Finding Land Open to Trapping
The DNR website provides detailed information about public and public-access lands in your area. Visit dnr.wi.gov keyword “trap”. Look for the “where to trap” link under the “during your season” subheading.

Voluntary Public Access (VPA) is a voluntary program that provides financial incentives to private landowners who open their property to public hunting, fishing, trapping and wildlife observation. Properties open to public access through the VPA program and information on enrolling can be found by visiting dnr.wi.gov keyword “VPA” or by calling the VPA coordinator, Justin Blindert, at (262) 224-9884.
Mink and Muskrat

Season Limits
No bag limit statewide.

Season Dates
Statewide: Oct. 25 – March 8, 2015

Mississippi River Zone: Nov. 10* – March 8, 2015
* Begins the day after duck season closes or the second Monday in November (Nov. 10th during the 2014–2015 season), whichever occurs first.

Note: muskrats taken while trapping beaver during the beaver season are legal to keep. See rules listed under “trap size and placement restrictions” on page 9.

Mink and Muskrat Management Zones

**Permits are required and special regulations apply. See page 7 for more information.
Otter

Permit Application Deadline: August 1

Season Limits
One otter per zone-specific permit.

Season Dates
North Zone: Nov. 1 – April 30, 2015
Central Zone: Nov. 1 – March 31, 2015
South Zone: Nov. 1 – March 31, 2015

Note: zones may be closed before the listed date if the harvest quota is reached early. Check with the DNR call center at 1 (888) 936-7463 for information on early closures.

Carcass Collection
During the 2014–15 season, no otter carcasses will be collected.

Mississippi River Zone
See page 22 for a map of the Mississippi River Zone

Federal Lands: on federal lands within the Mississippi River zone (see page 8), the otter season does not open until the muskrat and mink seasons open. Federal rules do not allow trapping on federal refuge lands after March 15, 2015.

Private Lands: on private lands within the Mississippi River zone, the otter season opens and closes with the South Zone (see dates above).

Otter Management Zones
2013 Results for Fisher Limited Draw and Population Analyses

Strong interest in fisher harvest resulted in more applicants being submitted than permits available. Permit numbers were up in zones A, B, D, E and F.

There are 6 fisher management zones in Wisconsin. Zones A–D are comprised of the northern portion of the state, Zone E is located in west-central Wisconsin and Zone F includes the remainder of the state and was the last zone opened for harvest in 2004.

Applications for a preference point only: 5,961

*State quotas reflect tribal declarations in zones A through E

**Note:** since 1997, a preference system has been in place assuring that all applicants receive equity in drawing permits.

Population Information

The fisher population in the northern third of Wisconsin grew rapidly during the 1980s. Higher harvest rates during the 1990s slowed or stabilized population growth. During the 1990s, fall population estimates fluctuated around an average of 10,700 fishers, approximately 16% above the population goal of 9,200. Harvests from 2003 through 2013 were generally below the recommended quotas, as we continue to experience an unexplainable population decline across the north.

2013 Results for Bobcat Limited Draw and Population Analyses

Management efforts have resulted in a bobcat population of approximately 2,500 animals north of Highway 64, with an average annual harvest of around 290 animals over the last 7 years. Quotas are set in late spring with final permit numbers determined in late summer when success rates are calculated. A preference system allows the continuous applicant a bobcat tag every 7 to 8 years, depending on the number of continuous applicants.

As with fisher and otter, bobcat must be tagged at the point of harvest and registered with a Conservation Warden. Hunters and trappers keep the pelt, with all bobcat carcasses are collected annually at the time of registration.
Bobcat population estimates and trends are determined by combining data on harvest, age and sex composition and reproductive rates with information on population trends from winter track surveys.

Over the past 29 years kits have averaged 21% of the harvest, yearlings 21% and adults 58%. With the recent longer, split season it appears harvest selection has decreased the take of younger age groups and increased take on older, larger adults. Examination of 1,796 female reproductive tracts suggests that $\frac{1}{3}$ of yearling females are pregnant and $\frac{3}{4}$ of adult females are pregnant each year. The average number of kittens per litter is 2.7 over this same time period.

With new bobcat harvest opportunities in southern Wisconsin beginning this fall, carcasses examined will provide us with additional information including population differences from the north to the south.

Applications for a preference point only: 7,677
Current statewide otter populations are at or below, management goals of approximately 13,000 animals. Although a majority of the population is found in the north, otter numbers in southern Wisconsin appear to be increasing. Permits are issued based on previous trapper success rates, which have increased significantly over the last 10 years.

**Population Information**

Estimates of Wisconsin’s otter population declined approximately 20% from about 15,600 animals in 1996 to 12,500 in the fall of 2003 with a slow increase to approximately 13,000 by the fall of 2006.

Population estimates calculated by the Otter Population Model suggest that the statewide otter population increased rather steadily from approximately 12,600 animals in 1982 to 15,800 in 1994, but have declined to approximately 10,700 in 2014. It appears that the population declines when harvest rates exceeded 13% of the preseason population. Harvests have exceeded that level in most years from 1994-2006. As a result, the statewide otter populations have been below the population goal of 13,000 otters since the late 1990s.

**Carcass Collection**

During the 2014–15 season, bobcat carcasses and fisher skulls are required to be submitted to the DNR at the time of registration. Bobcat carcasses are an annual need as pregnancy rates can fluctuate significantly year-to-year, requiring annual adjustments. Fisher and otter pregnancy rates do not fluctuate as much, so periodic carcass collections are adequate. However, age data collected from cross-sectioned teeth is equally as important for keeping track of population age structure of these three limited-harvest species; thus the request for fisher skulls this year.

With these carcasses and/or skulls in hand, additional insights are obtained by sharing tissue samples with cooperating research scientists. Over the past decade Wisconsin furbearer carcasses have been important components of studies on diet, genetics, parasites, diseases and contaminants. Collectively, this information aids in management and assuring healthy populations in the future. We thank all who have assisted in this effort, especially the successful hunters and trappers.
Best Management Practices (BMPs)

Trappers and state wildlife agencies continue to develop “Best Management Practices” (BMPs) for trapping in the United States. Trapping BMPs are documents that identify techniques and traps that address the welfare of trapped animals and allow for the efficient, selective, safe and practical capture of furbearers. BMPs are methods to improve trapping by developing recommendations using sound science. They are developed through actual field tests and careful data collection. The information is provided to state agencies and trappers for voluntary use in their trapper education and furbearer management programs.

Wisconsin has been involved in the BMP process since it began in 1997. BMPs are intended to inform people about traps and trapping systems considered to be state-of-the-art in animal welfare and efficiency and explain how some existing traps can be modified to enhance animal welfare. To date, initial BMP studies and publications have been completed for all Wisconsin species.

A Wisconsin 3 year study was completed in 2003 and resulted in the publication Cable Restraints in Wisconsin – A Guide to Responsible Use (WM-443) and the legal use of cable restraints in Wisconsin.

Public Impressions of Trapping

In 2000, the Association of Fish and Wildlife Agencies (AFWA), who led this huge BMP effort, selected Connecticut, Indiana and Wisconsin as pilot states to examine public perceptions of trapping. Not only did we learn that 71% of the Wisconsin public supports regulated trapping, but we discovered a number of messages important to the public. These “key messages” are:

• regulated trapping does not cause wildlife to become threatened or endangered;
• trapping is managed through scientifically-based regulations strictly enforced by Wisconsin conservation wardens;
• the Wisconsin DNR, with input from stakeholders, continually reviews and develops rules, regulations, education programs and capture methods that consider animal welfare, and;
• regulated trapping provides many benefits including reducing wildlife damage to crops and property and reducing threats to human health and safety.

Why are BMPs needed?

• to ensure the continued responsible management of wildlife resources;
• to continue the process of improving traps and trapping methods that will maintain and improve animal welfare;
• to maintain public acceptance through a reduction in real and perceived problems associated with trapping, and;
• to sustain regulated trapping now and in the future and to maintain the integrity of furbearer management programs throughout the United States.

Trapping will only prosper and continue if the trapping community, along with natural resource agencies, work together to improve harvest systems and promote the humane treatment of animals. Thanks for your support!
Trapper Education Course

Wisconsin Cooperative Trapper Education Program (WCTEP)

dnr.wi.gov keywords “trapper ed”

A Cooperative Trapper Education Program of
the Wisconsin Department of Natural Resources
and Wisconsin Trappers Association

Why Trapper Education?
We believe that trappers create a good image when they engage in responsible and ethical pursuit of our furbearing resource. Trapper education teaches new or inexperienced trappers ethical trapping procedures, the most humane trapping methods, the history of trapping in Wisconsin and North America and basic wildlife management principles. It is also important for trappers to learn and understand the importance of maintaining good relationships with landowners, other outdoor enthusiasts and managers of our natural resources. The Wisconsin trapper education course provides a solid beginning to trapping education, an education you will use everyday on the trapline.

Boat Regulations

Prevent the Spread of Disease and Exotic Species

Viral Hemorrhagic Septicemia (VHS)
In order to prevent the spread of the VHS virus and invasive species, all water must be drained from all boats, boat trailers, boating equipment and other gear immediately after removing from water, bank or shore of all waters of the state.

Aquatic Invasive Species
Aquatic invasive species crowd out native plants and animals as well as threaten the quality of regulated trapping in wetlands. To prevent this, the law requires removal of all aquatic plants and animals attached to the exterior of all vehicles, boat trailers, equipment or gear before transporting on any roadway. Drain any water from boats and equipment before leaving the wetland. Spray/rinse these items with hot and/or high pressure water and allow to dry for at least 5 days. Wisconsin state statutes prohibits launching a boat, boat trailer or boating equipment if there are any aquatic plants or animals attached. For more information, visit dnr.wi.gov keywords “aquatic invasive species”.

Please Don’t Move Firewood!
Firewood can harbor many different kinds of invasive pests and diseases that are harmful to Wisconsin’s trees, both in forest and urban settings. Gypsy moth, oak wilt and the emerald ash borer are just a few examples. Restrictions on bringing firewood onto state managed lands are in place to help protect trees in state parks and forests. Details can be found online at dnr.wi.gov keyword “firewood” or by phone at: 1 (877) 303-WOOD (9663).
Who must attend?
All first-time trappers must complete the Wisconsin trapper education course prior to purchasing a trapping license. It is recommended that you be at least 10 years old to attend this class. Class size may be limited, so early registration is recommended. No late applications will be accepted.

Note: You must have a DNR customer ID number prior to the first class. Call 1 (888) 936-7463 to obtain this number.

Persons who purchased a Wisconsin trapping license on or before May 12, 1992 or are actively engaged in farming in Wisconsin as defined by State Statute 102.04(3) and are a current Wisconsin resident are exempt from completing trapper education.

Where and when are the classes held?
Classes will be held in communities statewide and each instructor sets their own class schedule. Commonly the course requires 1-2 evening sessions and one weekend day or a full weekend. Class locations are available by contacting instructors or at dnr.wi.gov keywords “trapper ed”.

What does it cost?
The fee for most courses is $12.00 payable to the Wisconsin Cooperative Trapper Education Program. This includes all your instruction materials. Some overnight workshops may have a higher fee if meals and lodging are provided.

What will you learn?
The course is designed to provide classroom time and outdoor practice time. An exam, which you must pass in order to successfully complete the course, will be administered.

The course includes:
- trapping history and highlights in wildlife conservation;
- role of trapping today;
- principles of wildlife management;
- wetland and upland values;
- furbearer management, biology and disease;
- trapping laws and ethics;
- trap preparation, adjustment, setting and safety;
- humane trapping methods;
- pelt preparation, skinning, grading, marketing, and;
- practice setting dry land sets and water sets

The instructors:
Each of the certified trapper education instructors in Wisconsin have completed a WTA-DNR instructor course. All instructors, including department personnel, are experienced trappers.

Instructional materials provided:
A student manual, set of Wisconsin trapping regulations, graduate card, arm patch and your first year’s trapping license (Wisconsin residents only) are provided to successful graduates of this course.

Where can you find more information and how do you sign up?
Contact the district coordinator for the district in which you live to get details on course dates, times, locations and the name of the instructor nearest you (see map on page 31). If you cannot reach a district coordinator, visit dnr.wi.gov keywords “trapper ed” or contact the Statewide Coordinator or DNR trapper education coordinator, 101 South Webster St., Madison, WI 53707-7921.
Correspondence Course
A 5-week correspondence course is available for students who cannot attend the regular trapper education course.

**Wisconsin Residents:** The correspondence course is $12.00 and there is a $13.00 deposit for the NTA handbook and WTA video. Your full deposit will be refunded if both materials are returned in good condition. Your deposit refund will be $6.50 if only one of these is returned and no deposit refund will be sent if neither are returned prior to returning the final exam. To get started, send a $25.00 check or money order payable to WCTEP to: WCTEP, P.O. Box 26, Boscobel, WI 53805.

**Non-residents:** The correspondence course is $28.00 and there is a $17.00 deposit for the NTA handbook and WTA video. Your full deposit will be refunded if both materials are returned in good condition. Your deposit refund will be $8.50 if only one of these is returned and no deposit refund will be sent if neither are returned prior to returning the final exam. To get started, send a $45.00 check or money order payable to WCTEP to: WCTEP, P.O. Box 26, Boscobel, WI 53805.

**More Information**
For more information on the correspondence course, contact Mike Widner, Correspondence Course Coordinator, at (608) 356-3621 or email trappereducation@yahoo.com.
