re: Assistance with gypsy moth management

Dear Community Forester;

June to early July can bring numerous calls related to gypsy moth caterpillars being a nuisance and eating leaves off trees. Perhaps your community has begun to receive complaints from your residents. I am sending this letter to you to offer assistance with gypsy moth problems and to provide some suggestions to combat the problem in the future.

The eastern half of the state of Wisconsin is now quarantined for gypsy moth. This means that tree-defoliating populations of the gypsy moths may be present at any location within this region. It is unlikely that any municipality in this region is devoid of gypsy moths; in many areas they are probably present at a low level that escapes notice.

Here are some suggestions to help your community cope with the gypsy moth complaints. First, if you are unfamiliar with the gypsy moth and are not sure how to identify gypsy moth caterpillars, information is available from a variety of sources. Go to the Wisconsin Gypsy Moth Internet Portal at [gypsymoth.wi.gov](http://gypsymoth.wi.gov) for links to the following sites with information on the pest. The UW Extension site has many photos to help with identification, explains control options for homeowners and has several informational brochures that can be downloaded and printed. The DNR gypsy moth site contains information on gypsy moth and the spray program for suppression of outbreaks. DNR staff can provide your community with informational pamphlets that can be made available to the public (see contact information below). If you can't find the answer to your questions on the websites, please call **1-800-642-MOTH (6684)** and leave a message for the DNR staff. This message line is checked daily during the summer and several times a week during the rest of the year and we will get back to you with an answer shortly. Please feel free to refer your residents to the website or toll free telephone number listed above.

Second, track (through listing or mapping) all the complaints of gypsy moth damage and nuisance that are reported to your office. Make sure the person(s) who answers calls for your community government knows to record the name and address of people calling to complain about caterpillars. Recording complaints is an effective way of pinpointing likely infestations. These records can be used to guide site visits to assess the extent of the problem and to determine if participation in the DNR gypsy moth suppression spray program is an appropriate option for your community.

Finally, the Wisconsin DNR gypsy moth suppression program can provide assistance in dealing with gypsy moth outbreaks on a larger scale (neighborhoods as opposed to single residences). Our program provides inexpensive, aerial applications of a caterpillar-specific insecticide to manage gypsy moth populations. If cost sharing for the suppression spray and administrative costs is available from the Federal government this year, the DNR will apply for it on your behalf. Suppression program eligibility requires a gypsy moth population high enough to cause defoliation, 50% tree coverage, that 50% of the trees present be preferred host trees (e.g. oaks, willow, birches, crabapple, blue spruce, and others), and that the infested area be 20 acres or greater in size.

For more information on the suppression spray and grant program and its requirements, visit <http://dnr.wi.gov/org/land/forestry/fh/gm/suppress.htm>. Grants are offered through counties so contact

your county government if your community is interested in participating in the suppression program. A list of county coordinators and their contact information is available at the DNR suppression webpage. We are in the process of updating the application for the 2008 season. Updated versions of applications for the suppression program will be put on the DNR web site as soon as available and mailed to each county coordinator in the fall. Grant applications for spraying in the spring of 2008 are due December 7, 2008.

For more assistance with gypsy moth problems, contact the DNR regional gypsy moth suppression coordinator for your county:
