

## Questions posed by the Task B work group:

1. How many high capacity well approval applications have been submitted to DNR in the last 2 years?
2. How many were approved?
3. How many were actually constructed?
4. How many have been in GPAs?
5. How many moved to “just outside” (1201 feet) in order to avoid an assessment?
6. How many have been near springs?
7. How many have been near “resource waters” not covered by the legislation (seepage lakes, wetlands, etc.)?
8. Could you produce a list or table of the high capacity well applications for the last 2 years, including...?
  - Intended use or purpose
  - Permanent or temporary
  - Pumping capacity
  - Location (coordinates)
  - Any other pertinent details
7. What system is the Department using for the mandatory pumping reporting for high capacity wells?
8. How do you know if everyone is actually complying?
9. How do you follow up if they aren't?
10. Does the Department have enough staff and/or money to implement this part of the law?
11. What percentage of approval holders submitted reports?
12. Do you know what the ratio of actual pumping to approved pumping is?
