[^0]${ }^{2}$ Michigan figures originally in cubic yards, converted to tons using a conversion factor of 3 cubic yards per ton. Michigan reports its figures in a fiscal year of $10 / 1$ to $9 / 30$. The figures
for a year (1Y) are a weighted average consisting of .75 * (10/1/1X-9/30/1Y figures) + . 25 * (10/1/1Y-9/30/12 figures).
NOTE: Waste exports to Minnesota are negligible and therefore not included.
The source of data is from the annual EPA ReTrac Report

[^0]:    Illinois figures originally in gate cubic yards, converted to tons using a conversion factor of 3.3 gate cubic yards per tor
