

Gypsy Moth Spray Information

This property is scheduled to be sprayed for gypsy moth on _____.

**Questions?
Ask park staff or call
1-800-642-6684.**

The spray will reduce damage to our trees and forest ecosystem.

The bacterial pesticide Foray includes “Btk” - a naturally-occurring soil bacteria that kills gypsy moth caterpillars that ingest it.

Btk has shown to be harmless to people, pets, and other animals. **One Foray formulation used is listed as acceptable for organic production by the Organic Materials Review Institute**

Quick Facts:

- Areal spraying is weather dependent.
- **Spraying may begin as early as 5:00 a.m.** or as late as afternoon.
- **Planes fly low...**just above the tree tops.
- Although the spray is not harmful, it can be sticky. You can avoid exposure by staying inside or in your tent during the spray and for 15 minutes after.
- If you find spray residue on your vehicle or outdoor gear you can easily wash it off with soap and water.
