

Species Assessment Group - Summary of group ratings

Date: 09/17/2007

Species: *Ailanthus altissima*

Members of the SAG:

Ratings for Criteria - 1st round	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	Total #	Average
1. Current status and distribution	4	3	3	3	2	2	3	4	3								
2. Establishment potential	4	3	3	3	2	3	3	4	4								
3. Damage potential	4	3	3	3	2	3	3	4	4								
4. Prevention and control potential	3	3	3	3	2	3	3	4	3								
5. Socio-economic impacts	4	3	3	3	2	3	3	4	4								
Totals - 1st round	Prohibited			Restricted				Watch			Non-restricted			Insufficient Information			
Number of votes for each classification	xxx			xxxxx				x									

Comments: 3 -This is a species that is not in commercial production. 4 - If there is a non-suckering root stock then there would a use for a seedless cultivar of this species. 5 - Found only in a few places not usually inhabited by any native or non-native species, but it has the potential to.

Ratings for Criteria - 2nd round	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	Total #	Average
1. Current status and distribution																	
2. Establishment potential																	
3. Damage potential																	
4. Prevention and control potential																	
5. Socio-economic impacts																	
Totals - 2nd round	Prohibited			Restricted				Watch			Non-restricted			Insufficient Information			
Number of votes for each classification																	

Final Recommended Classification : Restricted
