Recommended Classification :

Comments:

(4) Very persistent where established, but slower spread, especially from urban areas into oak habitats. Hopefully only small populations where present so eradication feasible, but need more info. Could also be watch-listed. (6) No known history of use in the nursery industry. (9) GLIFWC just starting research (lit review) on this species. Haven't observed it, but problematic elsewhere. Recommending prohibited because of negative impacts on spring ephemerals.
