*Includes approx. 21 MBF Red Maple, 3 MBF Black Cherry, and 12 MBF Basswood

Estimated Price for Entire Sale = \$ 23,919.00

Purpose of Sale:

To regenerate oak stands while retaining reserve trees, and to thin red pine to improve stand health and vigor

Cutting Specifications: In red pine stands cut every third row; rows are marked in orange paint. In hardwood stands, cut all trees >2" DBH. Do not cut trees marked in green paint or white pine.

Special Operating Requirements and Slash Disposal:

1. This sale is located mainly on dry ground. All stands should be harvested during dry or frozen ground conditions. Care should be taken to avoid rutting and soil compaction.
2. The sale boundaries are red paint lines in the hardwood stands and areas outside the red pine plantations. Blue paint lines are property boundaries to private lands. Do not fell trees across paint lines and do not cut painted boundary trees.
3. No biomass harvesting is allowed on this sale due to poor soil fertility.
4. All pine products cut between March 1st and August 30 must be removed from the sale area within three weeks from time of cutting. Pine products cut during the remainder of the year must be removed before March 15th.
5. No recreational trails run through this property, but all roads used by logging equipment should be left in good condition. Telemarken Road is a snowmobile trail in the winter and proper signage should be posted if logging equipment is using the road. Consult with DNR Forester before sale begins so proper precautions are taken for safety on or near snowmobile trail.
6. Slash must be evenly lopped/scattered within the sale boundary and shall be deposited a minimum of 10 feet from the mowed right-of-way of any highway, town road, or recreational trail. Slash within 50 feet of all town roads and recreational trails must lie within 2 feet of the ground. Do not bury seedlings or saplings with slash.

General Requirements:

1. All designated tree species must be cut and forwarded concurrently with the sale.
2. All stumps shall be no higher than the stump diameter, or 10 inches, whichever is less.
3. Do not cut or knock down any dead or hollow trees. These are important wildlife habitat. Any that must be cut shall be left in big pieces on the forest floor.
4. Utilization: cut and use all designated trees with one or more 100" sticks to a 4" top diameter.
5. Notify the DNR forester before you start the job, and each time you pull out or return to the job.
6. Any new roads and all landings must be approved by a DNR forester before operations begin.
7. Any berms removed during harvesting operations must be put back to the satisfaction of the DNR Forester.
8. Any trees cut or pushed over for new roads or landings must be utilized or cleaned up to the DNR Forester's satisfaction.
9. **Wisconsin's Best Management Practices for Invasive Species applies – contractor must clean equipment before entering and leaving the sale area! This involves brushing away all dirt and cleaning air intakes of debris.**
