Objectives for this Management Area are to increase the presence and age of red and white pine and maintain aspen as a strong component of mixed stands.

Stand 9 is a 5 acre aspen stand that is 103 years old. The proposed silvicultural system is coppice with standards to regenerate the aspen in this mixed stand.

Stand 13 is a 15 acre Norway spruce plantation of 1946 origin with scattered aspen and maple. The spruce will benefit from a thinning.

Stand 14 is a 64 acre, 164 year old white pine stand with some crown die-back and is ready for regeneration harvests. The hardwoods will be harvested and the pine will receive variable intensities of a shelterwood treatment. Crown closure reduced to around 50%. The stand will be evaluated post-harvest for site preparation.

Biomass harvest is approved as soils are appropriate.

Access is from Hwy N to a network of woods roads.
