Landtype Associations

-  222Le01
-  222Le02
-  222Le03
-  Ecological Landscape
-  County Boundaries
-  Sections
-  Subsections

This map is based on the National Hierarchical Framework of Ecological Units (NHFEU) (Cleland et al. 1997).

The Ecological landscapes used in this handbook are based substantially on Subsections of the NHFEU. Ecological landscapes use the same boundaries as NHFEU Sections or Subsections. However, some NHFEU Subsections were combined to reduce the number of geographical units in the state to a manageable number. LTA descriptions can be found on the back page of this map.

Landtype Association Descriptions for the Southwest Savanna Ecological Landscape

222Le01	Military Ridge Prairie	The characteristic landform pattern is steep with summits and shoulders of ridges common. Soils are well drained silt loam over ??. Common habitat types include ??.
222Le02	Platteville Savannah	The characteristic landform pattern is sloping with summits, shoulders, and backslopes of ridges common. Soils are well drained silt loam over ??. Common habitat types include ??.
222Le03	Pecatonica Valley	The characteristic landform pattern is sloping with summits, shoulders, and backslopes of ridges common. Soils are moderately well drained silt over ??. Common habitat types include ??.
