\* Includes approximately 37 MBF of sawlog volume

\*\* Includes approximately 64 MBF of sawlog volume (90% of weight is white pine, 10% jack pine)

\*\*\* Includes approximately 16 MBF of sawlog volume

\*\*\*\* Includes approximately 6 MBF of sawlog volume

---

**Estimated Price for Entire Sale = \$22,787. 00**

**Purpose of Sale:**

To thin areas of red pine and white pine to increase tree growth and quality. To promote size growth in white pine stand and discourage less desirable tree species.

**Special Operating Requirements and Slash Disposal:**

1. This sale requires the Purchaser to complete Annosum root rot preventive treatment if harvesting between 4/1-11/30 **in the red pine plantation only**. Treatment must be performed by a Certified Pesticide Applicator. Treatment involves chemically treating all fresh-cut stumps of pines of merchantable size by applying either Sporex (sodium tetraborate decahydrate) or CELLU-TREAT (disodium octaborate tetrahydrate). Treatment shall be made the same day as harvest and a dye product shall be added to liquid solutions for inspection purposes. The cost of this application can vary based on application method and harvest conditions, but should be considered when submitting bids on this timber sale.
2. Trees to be harvested are marked in orange paint. All trees marked must be cut. The sale boundaries are red pine plantations and are not painted.
3. No biomass harvesting is allowed on this sale due to low nutrient soils.
4. All pine products cut between March 1st and August 30 must be removed from the sale area within three weeks from time of cutting. Pine products cut during the remainder of the year must be removed before March 15<sup>th</sup>.
5. All landings, roads and berms must be approved in advance by a DNR forester before operations begin and shall be restored to the forester's satisfaction following the harvest completion.
6. The ATV trail is not to be used for logging equipment or transportation/storage of cut forest products. The trail may be crossed with logging equipment to access harvest areas in the southwest red pine thinning.
7. The road right-of-way along Stanton Creek Road is habitat for multiple endangered species. **No landings or ground disturbance** is allowed. Landings may be placed along the woods trails within the sale and at existing landing sites.

**General Requirements:**

1. All designated tree species must be cut and forwarded concurrently with the sale.
2. All stumps shall be no higher than the stump diameter, or 10 inches, whichever is less.
3. Do not cut or knock down any dead or hollow trees. These are important wildlife habitat. Any that must be cut shall be left in big pieces on the forest floor.
4. Utilization: cut and use all designated trees with one or more 100" sticks to a 4" top diameter.
5. Notify the DNR forester before you start the job, and each time you pull out or return to the job.
6. Any trees cut or pushed over for new roads or landings must be utilized or cleaned up to the DNR Forester's satisfaction.
7. Contact the town of Millston prior to beginning logging operations at: 715-284-0913.
8. **Wisconsin's Best Management Practices for Invasive Species applies – contractor must clean equipment before entering and leaving the sale area! This involves brushing away all dirt and cleaning air intakes of debris.**
