STATE OF WISCONSIN
DEPARTMENT OF NATURAL RESOURCES

GENERAL PERMIT TO DISCHARGE UNDER THE WISCONSIN POLLUTANT DISCHARGE ELIMINATION SYSTEM (WPDES)

In compliance with the provisions of Chapter 283, Wis. Statutes, any Wisconsin operation with a point source discharge of

A POLLUTANT, SUCH AS AN EXCESS OR RESIDUAL PESTICIDE, DUE TO ACTIVITIES TO CONTROL DETRIMENTAL OR INVASIVE AQUATIC ANIMALS

that meets the applicability criteria listed in part 1 of this general permit (GP), is authorized to discharge pollutants directly to surface waters of the state and to groundwater of the state (via incidental seepage of pesticide treated water) in accordance with the effluent limitations, monitoring requirements and other conditions set forth in this permit.

State of Wisconsin Department of Natural Resources
For the Secretary

By

Susan L. Sylvester, Director
Bureau of Water Quality
Division of Water

10 - 26 - 11
Date Permit Signed/Issued

PERMIT EFFECTIVE DATE – November 1, 2011
EXPIRATION DATE – September 30, 2016
1. APPLICABILITY CRITERIA & PERMIT COVERAGE

1.1. Activities Covered
This permit applies to a point source pollutant discharge directly into waters of the state from a detrimental or invasive aquatic animal control activity that has: (1) a biological pollutant discharge, (2) an excess chemical pollutant discharge into waters of the state located beyond the animal control area boundary, and/or (3) a chemical pollutant residue that remains in waters of the state after completion of the animal control treatment period. An excess or residual chemical pollutant for an aquatic animal control activity would include, but not be limited to: a pesticide active or inert ingredient, a pesticide degradation by-product, a chemical applied to enhance pesticide effectiveness, and a non-pesticide chemical applied to control an aquatic animal. As specified in s. 283.01(20), Wis. Statutes, waters of the state include those portions of Lake Michigan and Lake Superior within the boundaries of Wisconsin, all lakes, bays, rivers, streams, springs, ponds, wells, impounding reservoirs, marshes, watercourses, drainage systems and other surface water or groundwater, natural or artificial, public or private, within the state or its jurisdiction, except those waters which are entirely confined and retained completely upon the property of a person. For the purposes of this permit, the term “aquatic animal” includes animal species that live in water for part of their life cycle.

The following activities are eligible for coverage under this permit:

1.1.1. Control of Detrimental or Invasive Aquatic Animal Species
This permit is applicable to a point source discharge of a pollutant directly to waters of the state due to control of a detrimental or invasive aquatic animal species, such as a fish or crayfish, listed in s. NR 20.38 (as authorized under s. 29.424, Wis. Stats) or listed in ch. NR 40, Wis. Adm. Code;

1.1.2. Control of Invasive Sea Lamprey Species
This permit is applicable to a point source discharge of a pollutant directly to waters of the state due to control of invasive sea lamprey species listed in ch. NR 40, Wis. Adm. Code;

1.1.3. Control of Invasive Mussel Species
This permit is applicable to a point source discharge of a pollutant directly to waters of the state due to control of invasive mussel species, such as zebra and quagga mussels, listed in ch. NR 40, Wis. Adm. Code;

1.1.4. Control Activities for Other Similar Detrimental or Invasive Aquatic Animals
This permit is applicable to a point source discharge of a pollutant directly to waters of the state due to control of other similar detrimental or invasive aquatic animals, as approved by the Department.

1.2. Activities Excluded

1.2.1. Discharge to an Outstanding Resource Water for Control of a Wis. Native Species
This permit is not applicable to a control activity for a Wisconsin native aquatic animal species (that is not listed as a detrimental in s. NR 20.38 Wis. Adm. Code) when that activity would have a biological or chemical pollutant discharge to an outstanding resource water as defined in s. NR 102.10, Wis. Adm. Code or would have a biological or chemical pollutant discharge that would lower the water quality of a downstream outstanding resource water.
1.2.2. Discharge to an Exceptional Resource Water for Control of a Wis. Native Species
This permit is not applicable to an activity for control of a Wisconsin native aquatic animal species (that is not listed as a detrimental in s. NR 20.38 Wis. Adm. Code) when there is no public health problem and that activity would have a biological or chemical pollutant discharge to an exceptional resource water as defined in s. NR 102.11, Wis. Adm. Code, or have a biological or chemical pollutant discharge that would lower the water quality of a downstream exceptional resource water.

1.2.3. Discharge to a Wetland
This permit is not applicable to an aquatic animal control activity that would have a pollutant discharge the Department has determined will not meet the wetland protection requirements of ch. NR 103, Wis. Adm. Code.

1.2.4. Discharge from Indian activities within Indian Country
This permit is not applicable to an aquatic animal control activity by a tribal entity that would have a pollutant discharge within Indian Country. Note: The US Environmental Protection Agency regulates pollutant discharges by tribal entities within Indian Country.

1.2.5. Discharge to 303(d) listed Impaired Resource Waters
This permit is not applicable to an aquatic animal control activity that would have a biological or chemical pollutant discharge to waters of the state identified as impaired by that pollutant. Impaired waters are those that have been identified by Wisconsin pursuant to Section 303(d) of the Clean Water Act as not meeting applicable State water quality standards. Impaired waters include both waters with State and Federally approved Total Maximum Daily Loads (TMDLs) and impaired waters for which the State and EPA have not yet approved a TMDL. At the issuance date of this permit, there are no Wisconsin waters identified as impaired by a pesticide.

Note: The section 303(d) list of Wisconsin impaired water bodies may be obtained by contacting the Department or by searching for the section 303(d) list on the Department’s Internet site. The Department updates the section 303(d) list approximately every two years. The updated list is effective upon approval by EPA. The current link to the section 303(d) list is: [http://dnr.wi.gov/org/water/wm/wqs/303d/](http://dnr.wi.gov/org/water/wm/wqs/303d/).

1.2.6. Discharge From Aquatic Animal Production (Aquaculture) Activities
This permit is not applicable to a pollutant discharge from aquatic animal production (aquaculture) activities when the facility is not a significant source of pollution and aquaculture production is below the threshold levels established in the 40 Code of Federal Regulations, Part 122.24.

1.3. Submittal of a Notice of Intent (NOI)
To obtain authorization to discharge a pollutant under this permit, an applicator or sponsor for the aquatic animal control activity shall submit a notice of intent for this Wisconsin General WPDES Permit or submit a ch. NR 107 Wis. Adm. Code aquatic organism management permit application (that requests WPDES permit coverage). A link to an electronic NOI for this permit will be included in 2012 on the Wisconsin WPDES general permit internet page.

1.4. Department Coverage Determination
The permittee shall retain the written record of the Department’s decision to authorize a pollutant discharge under this general WPDES Permit. The Department’s permit coverage authorization shall be in writing and will show the permittee’s start date for legal discharge under this permit.
1.5. Notice of Termination (NOT) Submittal
When requesting discontinuation of coverage under this WPDES general permit, the permittee shall inform the Department in writing. The request for termination can be made via letter, electronic document transmittal, or by sending a copy of the Wis. GP Notice of Termination to the Wis. Dept. of Natural Resources, Water Quality Program, P.O. Box 7921, Madison, WI 53707. Coverage under this WPDES general permit will be terminated upon receipt of the termination notice by the Department.

2. REQUIREMENTS FOR ALL DISCHARGES

2.1. Compliance with Wisconsin Water Quality Standards
The permittee shall implement applicable measures as necessary to ensure any biological or chemical pollutant discharge is controlled to prevent:

2.1.1 Violation of the surface water quality standards as specified in chs. NR 102, 103, 104, 105, 106, and 207, Wis. Adm. Code. General surface water standards (NR 102.04) specify that pollutant discharges be controlled to prevent interference with public rights from toxic substances, objectionable deposits, floating or submerged material, and materials producing color, odor, taste or unsightliness;

2.1.2 Violation of any groundwater standards in ch. NR 140, Wis. Adm. Code; and

2.1.3 Harm to endangered and threatened resources as specified in s. 29.604, Wis. Stats. and ch. NR 27, Wis. Adm. Code.

2.2. Discharge of Non-pesticide Animal Control Products/Additives
Non-pesticide products or additives, such as oils, bacteria, enzymes, pheromones, polymers, surfactants, etc., used in conjunction with an aquatic animal control project shall be managed so any biological, excess chemical, or residual chemical pollutant discharge meets Wisconsin water quality standards as specified in part 2.1. The Department may require the permittee to submit information on the aquatic toxicity, human health impact, and persistence of any pesticide or non-pesticide product or additive used to control an aquatic animal when there would be a pollutant discharge to waters of the state.

2.3. Discharge to an Outstanding or Exceptional Resource Water Due to Control of a Detrimental or Invasive Species
When efforts to control a detrimental or invasive animal listed in s. NR 20.38 or ch. NR 40, Wis. Adm. Code result in a pollutant discharge to an outstanding resource water or an exceptional resource water (when there is no public health problem), the aquatic animal control activity shall be managed so: (a) any biological pollutant discharge quickly degrades or is neutralized to a level that does not exceed the background concentration of the pollutant in the receiving water as specified in s. NR 207.03, Wis. Adm. Code, (b) any excess chemical pollutant discharge outside of the treatment area/transition zone does not exceed the background concentration of the pollutant in the receiving water as specified in s. NR 207.03, and (c) any chemical pollutant residual remaining after completion of the treatment period does not exceed the background concentration of the pollutant in the receiving water as specified in s. NR 207.03. Wisconsin surface waters classified as outstanding and exceptional quality are listed in s. NR 102.10, Wis. Adm. Code.
2.4. Pesticide Application Control
The permittee shall not exceed the pesticide label maximum application rate established by the Federal Insecticide, Fungicide & Rodenticide Act (FIFRA) and any use restrictions established by the Wis. Dept. of Agriculture, Trade and Consumer Protection (DATCP), and shall:

2.4.1 Ensure the applicator using or directing the use of a pesticide is licensed and certified as required by Wis. DATCP for the pesticide product being used;

2.4.2 Maintain pesticide application equipment in proper operating condition by adhering to general industry practices and standards, and by maintaining (calibrating, cleaning, repairing, etc.) such equipment as needed to ensure effective pesticide application and aquatic animal control;

2.4.3 Ensure that the equipment’s rate of pesticide application is calibrated to deliver the desired quantity of pesticide for effective control of the target aquatic animal; and

2.4.4 Perform regular maintenance activities to reduce leaks, spills, or other unintended discharges of pesticides associated with the application of pesticides covered under this permit.

2.5. Identify the Characteristics of the Aquatic Animal Problem
An aquatic animal control operation covered under this permit shall, prior to initiation of a pest treatment project:

2.5.1 Evaluate the target aquatic animal species to develop management strategies based on developmental and behavioral considerations;

2.5.2 Estimate current distribution of the target aquatic animal within the treatment area and estimate potential distribution in the absence of control measures; and

2.5.3 Identify life cycle characteristics suitable for management activities designed to reduce reproduction or survival of the target detrimental or invasive aquatic animal;

2.5.4 Identify possible factors causing or contributing to the aquatic animal problem;

2.5.5 Establish action threshold densities for the target aquatic animal population for implementation of aquatic animal control strategies.

2.6. Evaluate Animal Management Options
An aquatic animal control activity covered under this permit shall, prior to initiation of a pest treatment project:

2.6.1 Select and implement, for each animal management project, efficient and effective means of animal control that includes identification of the characteristics of the animal problem and evaluation of methods to minimize the pollutant discharge resulting from application of chemical pesticides, biological pesticides and animal control additives or treatments (such as those used to enhance pesticide effectiveness or otherwise manage an animal problem) for control of detrimental or invasive aquatic animals;

2.6.2 Considering impacts to human health, impacts to non-target organisms, pesticide efficacy, pesticide persistence, feasibility, and cost effectiveness, evaluate the following management options: (a) no action, (b) prevention, (c) mechanical or physical control methods that include water level management and physical barriers, (d) biological control agents, (e) biological pesticides, and (f)
chemical pesticides.

2.7. Minimize the Pollutant Discharge

When pesticide use is necessary to manage a detrimental or invasive aquatic animal and there is a discharge of a biological or chemical pollutant to waters of the State, the permittee shall minimize the discharge of pollutants related to control of the target aquatic animal by taking the following steps:

2.7.1 Evaluate the use of physical obstructions, where feasible, to create a temporary defined animal treatment area to control any excess pollutant discharge;

2.7.2 Conduct surveillance prior to the pesticide treatment project to assess animal density within the treatment area and only apply a pesticide when an action threshold density has been met;

2.7.3 Minimize the amount of pesticide used and minimize the potential for a pesticide residue by drawing down the water level in the treatment area when practical;

2.7.4 Evaluate options to minimize any excess pesticide discharge by retention/recycle of water within the treatment area;

2.7.5 Assess environmental conditions (such as water temperature, flow, precipitation, wind speed, etc.) in the treatment area prior to each pesticide application to identify whether existing environmental conditions are suitable for target animal control activities;

2.7.6 Evaluate seasonal factors to select an appropriate time for pesticide treatment to provide effective control of the target species, to reduce pesticide persistence beyond the treatment period, and to minimize impact on non-target species; and

2.7.7 Utilize limited spot/area treatments, where practicable and feasible, to control the target species based on a susceptible life history stage.

2.8. Discharge of Other Pesticide Active Ingredients

2.8.1 The permittee may discharge a pesticide active ingredient not listed in this permit on a limited basis in the context of data development and/or research to support pesticide registration under the jurisdictions of EPA or the Wis. DATCP through the issuance of an Experimental Use Permit (Federal or State). A permittee discharging a pesticide for such purposes is not required to create an Aquatic Animal Management decision summary document under part 6.3 of this permit, but must follow the other requirements of this permit. A permittee that is exempt from needing an Experimental Use Permit as per 40 CFR 172 and s. ATCP 29.71 may discharge a pesticide active ingredient not listed in this permit but is required to follow all of the requirements of this WPDES general permit;

2.8.2 A permittee may discharge a pesticide active ingredient not listed in this permit or an active ingredient in a pesticide not labeled for use in a location appropriate to aquatic animal management on a limited basis in the context of a Special Local Need (SLN) (Section 24c) registration granted by the Wis. Department of Agriculture, Trade and Consumer Protection under s. ATCP 29.72 or a Section 18 emergency exemption granted by EPA under 40 CFR 166. Discharges related to such authorized pesticide uses are subject to all other requirements of this WPDES general permit.

2.8.3 A permittee may discharge a pollutant or pesticide active ingredient not addressed in this permit if use of the aquatic organism control product is approved under a permit issued by the Department under the authority of Ch. NR 107 or NR 109, Wisconsin Administrative Code. Discharges related to such permitted aquatic organism control products are subject to the other
requirements of this WPDES general permit.

3. ADDITIONAL REQUIREMENTS FOR ACTIVITIES TO CONTROL DETRIMENTAL OR INVASIVE AQUATIC ANIMALS

Control activities for a detrimental or invasive aquatic animal species, such as fish and crayfish, listed in chs. NR 20 and NR 40, Wis. Adm. Code that have a point source pollutant discharge to waters of the state shall meet the following additional requirements.

3.1. Excess Discharge Monitoring for Certain Pesticide Applications

In any year that the permittee uses Rotenone or Antimycin and there is a discharge of excess pesticide (outside of the treatment area/transition zone) to a fish-bearing receiving water, the permittee shall collect and analyze at least one grab sample for that year to determine the representative pesticide concentration in the fish-bearing water receiving the excess pesticide discharge. A bioassay result from the edge of the detoxification zone may be submitted in lieu of a chemical analysis for rotenone or antimycin. The Department may waive this requirement in writing based on a demonstration by the permittee that such receiving water testing is not possible due to sample collection, analysis method, public health emergency, or legal issues that prevent collection of valid sample results. The results of any annual receiving water pesticide sampling shall be submitted to the Department by February 15th of the year following the pollutant discharge as specified in Part 6.5 of this permit.

3.2. Aquatic Animal Control Pesticide Active Ingredients

The following pesticide active ingredient substances may have an excess or residual chemical pollutant discharge and/or a biological pollutant discharge under this WPDES permit when the pesticide product containing the active ingredient is registered with EPA, is registered with the Wisconsin Dept. of Agriculture, Trade and Consumer Protection for use in Wisconsin, and is used consistent with the label in a location appropriate to aquatic animal management. Part 2.8 of this permit may also authorize the discharge of additional pesticide active ingredients. A permittee may request authorization to discharge other pesticide active ingredient substance by requesting this permit be modified to include the active ingredient, or a permittee may apply for a site specific WPDES individual permit to authorize the discharge of the pesticide active ingredient.

1. Antimycin A  [Check Wisconsin DATCP registration prior to use]
2. Piperonyl Butoxide (PBO)
3. Pyrethrins
4. Rotenone
5. Cube Resins other than Rotenone

3.3. Rotenone and Antimycin Neutralization

The permittee shall chemically neutralize the rotenone or antimycin active ingredient for any water moving outside of the treatment area transition zone. A transition zone is allowed for the neutralization chemical reaction to take place. The neutralization chemical feed shall be controlled so rotenone or antimycin is not detected outside of the treatment area transition zone. Also, when the treatment period is over, there shall be no detectable amount of rotenone or antimycin residual within the treatment area or transition zone.

3.4. Total Residual Halogen

The permittee may discharge hypochlorite and other forms of chlorine or bromine under this WPDES permit provided the total residual halogen discharge requirements of paragraph 5.3 are met.
4. ADDITIONAL REQUIREMENTS FOR DISCHARGES FROM SEA LAMPREY CONTROL

Invasive sea lamprey control activities that have a point source pollutant discharge to waters of the state shall meet the following additional requirements.

4.1. Excess Discharge Monitoring for Certain Pesticide Applications

In any year that the permittee uses Bayluscide or TFM and there is an discharge of excess pollutant (outside of the treatment area or transition zone) to a fish-bearing receiving water, the permittee shall collect and analyze at least one grab sample for that year to determine the representative pollutant concentration in the fish-bearing water receiving the excess pollutant discharge. A bioassay result from the edge of the transition/detoxification zone may be submitted in lieu of a chemical analysis for Bayluscide or TFM. The Department may waive this requirement in writing based on a demonstration by the permittee that such receiving water testing is not possible due to sample collection, analysis method, public health emergency, or legal issues that prevent collection of valid sample results. The results of any annual pollutant monitoring event shall be submitted to the Department by February 15th of the year following the pollutant discharge as specified in Part 6.5 of this permit.

4.2. Sea Lamprey Pesticide Active Ingredients

The following pesticide active ingredient substances may have an excess or residual chemical pollutant discharge and/or a biological pollutant discharge under this WPDES permit when the pesticide product containing the active ingredient is registered with EPA, is registered with the Wisconsin Dept. of Agriculture, Trade and Consumer Protection for use in Wisconsin, and is used consistent with the label in a location appropriate to aquatic animal management. Part 2.8 of this permit may also authorize the discharge of additional pest control substances. A permittee may request authorization to discharge other pesticide active ingredient substance by requesting this permit be modified to include the active ingredient, or a permittee may apply for a site specific WPDES individual permit to authorize the discharge of the pesticide active.

1. Niclosamide, aminoethanol salt (such as Bayluscide)
2. 3-Trifluoromethyl-4-nitrophenol (TFM)

5. ADDITIONAL REQUIREMENTS FOR DISCHARGES FROM INVASIVE MUSSEL CONTROL

Invasive mussel control activities that have a point source pollutant discharge to waters of the state shall meet the following additional requirements.

5.1. Monitoring for Excess Pollutants from Invasive Mussel Control

A permittee that has an excess pollutant discharge to waters of the state outside of the treatment area transition zone during a year shall analyze at least one grab sample for that year for the pollutant within 12 hours of the peak treatment concentration. The grab sample shall be representative of the pollutant concentration in the waters of the state just beyond the treatment/transition zone. The Department may waive this requirement in writing based on a demonstration by the permittee that such receiving water testing is not possible due to sample collection, analysis method, public health emergency, or legal issues that prevent collection of valid sample results. The results of any annual receiving water pesticide sampling shall be submitted to the Department by February 15th of the year following the pollutant discharge as specified in Part 6.5 of this permit.
5.2. Invasive Mussel Control Substances and Treatments
The following invasive mussel control substances or treatments, including other forms of chlorine or bromine, may have an excess or residual pollutant discharge under this WPDES general permit. Part 2.8 of this permit also authorizes the discharge of additional pest control substances. A permittee may request authorization to discharge other pesticide active ingredient substance by requesting this permit be modified to include the active ingredient, or a permittee may apply for a site specific WPDES individual permit to authorize the discharge of the pesticide active ingredient.

1. Elevated Water Temperature
2. Sodium or Calcium Hypochlorite
3. Chlorine Dioxide
4. Chlorine
5. Bromine
6. pH adjustment

5.3. Limitations for Temperature, Total Residual Halogen and pH
Animal control activities shall be managed so that any excess or residual pollutant does not exceed a Wisconsin water quality standard as specified in part 2.1 of this permit. For many projects, the best way to meet this requirement is to draw the water from within the mussel treatment area into the intake pipe. When this is not feasible, the permittee shall demonstrate to the Department (in an attachment to the NOI) how the excess or residual pollutant will be controlled to meet Wisconsin water quality standards. For animal control treatments using forms of chlorine or bromine, in most cases the Department would require that any waters of the state outside the treatment zone and after the treatment period contain a non-detectable level of total residual halogen. The pH in any waters of the state outside the treatment zone and after the treatment period would be required to be greater than 6.0 Std. Units and less than 9.0 Std Units. The temperature requirements for heat discharges to any waters of the state outside the treatment zone and after the treatment period would be determined on a case by case basis when the activity is covered under the general permit.

6. DOCUMENTATION AND REPORTING

6.1. Visual Monitoring
During or soon after aquatic animal control activities, all permittees shall visually observe areas where there is an excess pollutant discharge to waters of the state to check for adverse incidents, such as death or distress of non-target organisms, disruption of wildlife habitat, risk to recreational activities, risk to human health, etc. This visual check shall be performed when it is safe and feasible. When a large area is treated via broadcast aerial spray, the permittee may limit the visual check to a representative sample of waters of the state that have received a pollutant discharge. Visual check records shall be retained at the permittee’s office for review by Department staff or any member of the public as specified in part 7.9 of this permit.

6.2. Exemption for Private Pond or Wetland
When the aquatic animal treatment area is confined to a private pond (as defined in NR 107.11(3)(a), Wis. Adm. Code) or private wetland area located entirely within the property boundaries of the permittee, there is no public access during the treatment period, and the permittee can control any overflow to prevent discharge of a point source pollutant beyond the private pond or private wetland area, the permittee is exempt from parts 6.3, 6.4 and 6.5 of this permit.
6.3. Aquatic Animal Management (AAM) Decision Summary

The requirements of part 6.3 of this permit are effective January 1, 2013 and apply to a permittee that exceeds an annual total aquatic animal treatment dimension of 20 acres (of waters of the state) or 20 linear miles of shoreline. When this cumulative annual animal treatment area is exceeded, the permittee is required to document a brief summary of the Aquatic Animal Management decisions for each treatment project with a pollutant discharge conducted from that date through the rest of the calendar year. A copy of the project specific AAM decision summary document shall be available at the site during treatment activities and at the permittee’s office for review by Department staff or any member of the public. Part 7.9 of this permit specifies the retention time for the AAM decision summary documents. If the permittee’s office is not staffed during normal business hours, the permittee shall provide a copy of the AAM decision summary for review no later than 5 days after any request to review the document. The AAM decision summary shall be updated when there are significant changes to the treatment area, target species, or pest control products used. If it is not possible to develop an AAM decision summary prior to a pesticide application related to a government declared invasive species emergency, the permittee shall develop the AAM decision summary within 30 days after the invasive species emergency is declared.

The primary objective of the aquatic animal management decision summary is to document the decision process of where, when, and how aquatic animal control is implemented within a permittee’s aquatic animal control area, to minimize the discharge of excess or residual chemical pollutants and biological pollutants to waters of the state, and to describe the actions taken to ensure discharges from aquatic animal control activities do not cause or contribute to a violation of Wisconsin water quality standards as specified in part 2.1, 2.2 & 2.3 of this permit. The AAM decision summary document shall include details on the following, at a minimum:

6.3.1 Permittee contact information, such as identification of the individual responsible for on-site operations, emergency reporting of permit noncompliance, and reporting of adverse incidents such as spills or impacts to non-target aquatic life (see part 7.2 & 7.5);

6.3.2 A map or tracking system that documents the aquatic animal treatment area, target aquatic animal breeding sites, endangered species habitat within the permittee’s treatment area, and any no-spray zones for sensitive aquatic species, etc;

6.3.3 Identification of the aquatic animal characterization efforts undertaken as specified in part 2.5 of this permit and the action thresholds established for the aquatic animal control project;

6.3.4 Documentation of the decisions regarding aquatic animal management options listed in part 2.6 of this permit;

6.3.5 Documentation of the pollutant discharge minimization activities undertaken as specified in part 2.7 of this permit, including target aquatic animal surveillance and evaluation of suitable environmental conditions for target aquatic animal control when action thresholds are met;

6.3.6 Conclusions regarding the effectiveness of the proposed treatment on the target species, considering nearby occurrence and reproduction of the target species beyond the treatment area, and movement range of the species;

6.3.7 Description of the actions taken to ensure pollutant discharges from aquatic animal control activities do not cause or contribute to a violation of Wisconsin water quality standards as specified in part 2.1, 2.2 & 2.3 of this permit;
6.3.8 Summary of any sampling and analysis activities the permittee will undertake to evaluate the effectiveness of the aquatic animal control treatments, and to meet the excess or residual pollutant monitoring requirements contained in parts 3.1, 4.1 & 5.1 of this permit;

6.3.9 Description of the record keeping and reporting activities needed to meet the requirements of part 6.1 (visual check) and 6.5 (annual report) of this permit.

6.4. Certification of Aquatic Animal Management Implementation
After January 1, 2014, a permittee that exceeds the annual total aquatic animal treatment dimension of 20 acres (of waters of the state) or 20 linear miles of shoreline shall certify to the Department that the requirements of Part 6.3 of this permit have been implemented. The certification shall contain the following statement and be signed in accordance with the Authorized Signature standard requirement in part 7.7 of this permit:

"I certify under penalty of law that the Aquatic Animal Management decision summary documents required by WPDES General Permit No. WI-0064564-1 have been completed and are retained at the permittee’s office or any other location approved by the Department. The AAM site specific decision summary documents were completed under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate information contained in the summary documents. Based on my inquiry of the person, or persons, directly responsible for gathering the information or who manage the activity, the information contained in the AAM decision summary documents are, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for providing false information, including the possibility of fine and imprisonment. In addition, I certify under penalty of law that, based upon inquiry of persons directly under my supervision, to the best of my knowledge and belief, the AAM decision summary documents adhere to the applicable requirement of WPDES General Permit No. WI-0064564-1.

This certification may be submitted with the annual reporting information (see part 6.5 below). When this certification has been submitted to the Department for one calendar year, re-certification is not required for subsequent years of discharge under this permit. A copy of this certification, showing the date submitted to the Department, shall be retained at the permittee’s business office.

6.5. Annual Monitoring Report
The requirements of part 6.5 of this permit are effective for the 2013 calendar year (first report due February 15th, 2014) and subsequent years. Except as specified in part 6.2 of this permit, the permittee shall annually report the following information for aquatic animal control activities that had a pollutant discharge to waters of the state during the calendar year: permittee name, treatment area size & location (GPS Lat/Long preferred), duration of the treatment period, target species name, control product name & amounts used, applicator names, any adverse conditions noted/corrective actions taken, and any pollutant testing results. The annual reporting information shall be submitted to the DNR Water Quality Program no later than February 15th of the next year. Either the Department’s ch. NR 107 treatment record may be used to submit the reporting information, or an alternate report format may be used that clearly shows the reporting information collected during the previous calendar year. Monitoring reports shall be signed in accordance with the Authorized Signature standard requirement in part 7.7 of this permit.

The annual reporting information may be submitted to the office that issued a ch. NR 107 or 109 permit for the aquatic animal control project or it may be submitted to the Headquarters office of the Department of Natural Resources Region in which the aquatic animal control activities were primarily located. The permittee shall report a zero pollutant discharge for a year when there have been no pollutant discharges under this permit related to aquatic animal control activities.
7. STANDARD REQUIREMENTS

7.1. NR 205, Wisconsin Administrative Code: The conditions in ss. NR 205.07(1) and NR 205.07(3), Wis. Adm. Code, are included by reference in this permit. The permittee shall comply with all of these requirements, except for s. NR 205.07(1)(n), which does not apply to facilities covered under general permits. Selected s. NR 205.07 requirements are listed below for convenience.

7.2. Spill Reporting for Pesticides and other Hazardous Substances: The permittee shall immediately notify the Department of an accidental release or spill of any pesticide or other hazardous substance to the environment as specified in ch. NR 706 and s. NR 205.07(3)b, Wis. Adm. Code. The Department shall be notified via the toll free 24-hour spills hotline (1-800-943-0003).

7.3. Duty to Halt or Reduce Activity: As required in s. NR 205.07(3)(e), the permittee shall curtail wastewater discharges or modify pesticide treatment activities to the extent necessary to maintain compliance with this permit.

7.4. Duty to Mitigate: As required in s. NR 205.07(1)(k), the permittee shall take all reasonable steps to minimize or prevent the likelihood of any adverse impacts to public health, the waters of the state, or the environment resulting from noncompliance with this permit.

7.5. Permit Noncompliance Reporting: As specified in s. NR 205.07(1)(s), Department notification is required within 24 hours of becoming aware of an adverse incident or permit noncompliance that may endanger human health or the environment. A written submission shall be made to the Department within 5 days of the time the permittee becomes aware of the noncompliance. The written submission shall contain a description of the noncompliance and its cause, the period of noncompliance including the exact date and times, and any corrective actions taken to mitigate the noncompliance. If the noncompliance has not been corrected, specify the anticipated time the noncompliance is expected to continue, and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

7.6. Inspection and Entry: The permittee shall allow an authorized representative of the Department, upon the presentation of credentials, to access the permittee's pollutant discharge location, to access the Aquatic Animal Management decision summary documents, and to inspect and monitor the discharge as described in s. NR 205.07(1)(d).

7.7. Authorized Signature: Reports, records, and monitoring results required by this permit shall be signed by the permittee's authorized representative as specified in s. NR 205.07(1)(g).

7.8. Recording of Results: For each effluent measurement or sample taken, the permittee shall record the following information as required in s. NR 205.07(1)(e):

- The date, exact place, method and time of sampling or measurements,
- The individual who performed the sampling or measurements,
- The date of the analysis and the individual who performed the analysis,
- The analytical techniques or methods used, and the results of the analysis.
7.9. Retention and Submittal of Reports, Records, and Monitoring Results: The permittee shall retain records of all monitoring required by this permit and report monitoring results as set forth in s. NR 205.07(1)(f) and (r). Reports (including Aquatic Animal Management decision summary documents, aquatic animal surveillance data and visual inspection reports), records, and monitoring results required by this permit shall be retained by the permittee for the duration of this permit or three years after this information is generated, whichever is longer.

7.10. Continuation of an Expired General Permit: As provided in s. NR 205.08(9), the terms and conditions of this general permit shall continue to apply until this general permit is reissued or revoked or until an individual permit is issued for the discharge to which the general permit applied. The status of expired general permits and forms for requesting continued permit coverage can be found by searching for “WPDES general permits” or accessed at http://dnr.wi.gov/org/water/wm/ww/gpindex/gpinfo.htm.

7.11. Enforcement: Any violation of this permit is enforceable under ss. 283.89 and 283.91, Wisconsin Statutes.

7.12. Severability: The provisions of this permit are severable, and if any provisions of this permit or the application of any provision of this permit to any circumstance is held invalid the remainder of this permit shall not be affected thereby.

7.13. Work near Surface Waters and Wetlands: Any work performed in wetland areas or within areas subject to local floodplain and shoreland regulations must conform to all applicable county or local ordinances. All applicable state permits and/or contracts required by chs. 30, 31 and 87, Wis. Stats. and sections 281.15, 281.17(10), 281.36 and 281.37, Wis. Stats. (or Wis. Administrative Code adopted under these laws), and applicable federal permits must be obtained as necessary.

7.14. Water Quality Sampling and Testing Procedures: Sampling and laboratory testing procedures shall be performed as specified in s. NR 205.07(1)(p) and as set forth below. Sampling and analysis of effluent samples shall be performed as specified in chapters NR 218 and NR 219, Wis. Adm. Code, respectively and shall be performed by a laboratory certified or registered in accordance with the requirements of ch. NR 149, except that immunoassay test results from certified labs will be accepted for pesticide analysis of receiving water samples.

7.15. Conventions for the Reporting and Use of Low Level Results: The permittee shall use the following conventions when reporting effluent monitoring results: (a) non-detected pollutant results shall be reported as < (less than) the value of the analytical method's limit of detection; (b) pollutant concentrations equal to or greater than the limit of detection, but less than the limit of quantitation, shall be reported and the limit of quantitation shall be specified; and (c) a zero value may be substituted for any non-detected pollutant result for the purposes of calculating an average or a mass discharge.
