SUBJECT: No Further Action
BRRTS # 02-31-281814
Kewaunee Fabrications – Building Expansion Area
520 North Main Street, Kewaunee
Kewaunee County; Wisconsin

Dear Mr. Draxler:

On February 6, 2002, the Wisconsin Department of Natural Resources received two reports titled *Impacted Soil Excavation Documentation* and *Results of Phase II Subsurface Assessment*, both prepared by STS Consultants, Green Bay. The Impact Soil Documentation Report references investigation and remediation of contaminated soils during a building expansion (map attached). The immediate action included soil excavation, stockpiling, sampling of excavation sidewalls, floor, and stockpiles.

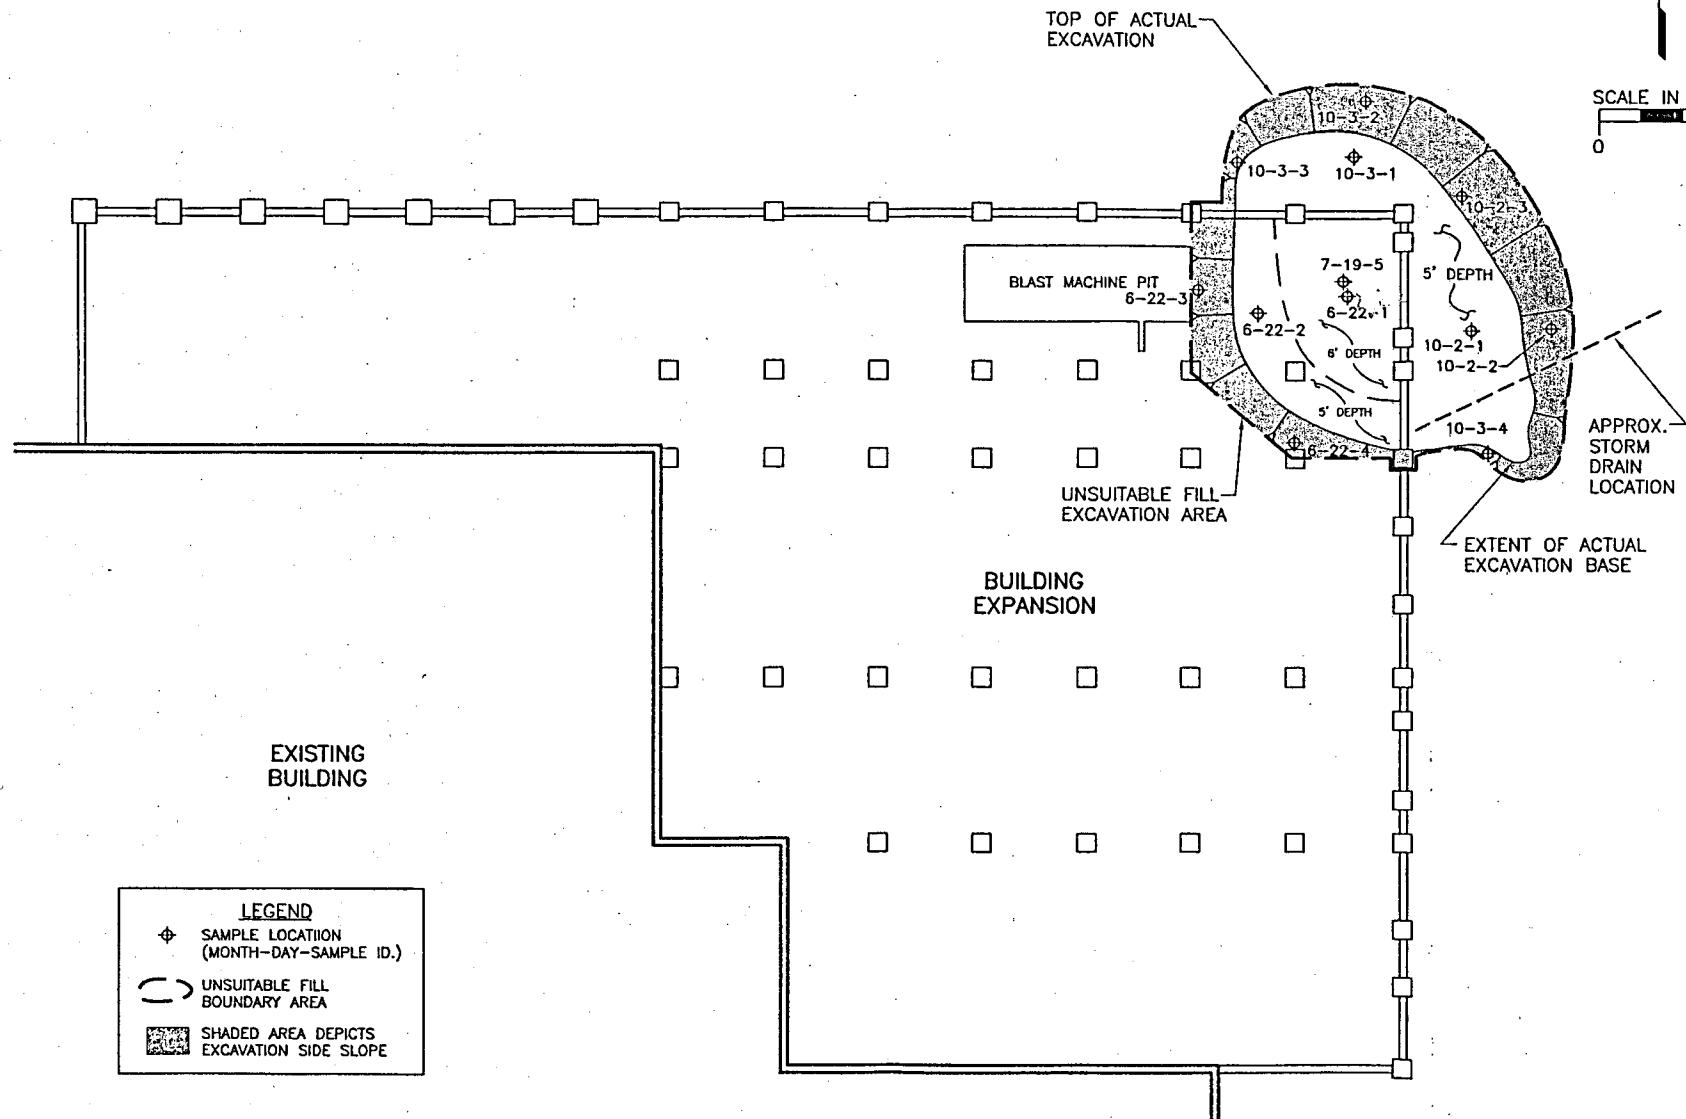

I have reviewed the documents and concur that the environment has been restored to the extent practicable as provided in ch. NR 708.09, Wis. Adm. Code. Therefore, the immediate action in response to a release has been completed and the Department of Natural Resources is requiring no further action at this time.

We appreciate your efforts to protect and restore the environment at this site. If you have any questions regarding this No Further Action determination, please contact me in Green Bay at 920-492-5865.

Sincerely,

Annette Weissbach
Hydrogeologist/Project Manager
Remediation & Redevelopment Program

Attach.

Re: Kewaunee Fabrications, L.L.C.
Kewaunee, WI
WDNR BRRTS No. 02-31-282814

Dear Ms. Weissbach:

On behalf of Kewaunee Fabrications, L.L.C., which is a wholly owned subsidiary of Oshkosh Truck Corporation, enclosed is a report dated January 7, 2002, prepared by STS consultants, Ltd. addressing the full remediation of the above-referenced project. Based on the results of the full remediation, we are requesting that the case be closed.

In addition to the report referenced above, I am also enclosing a Phase II Subsurface Assessment Report, dated November 2001, also prepared by STS Consultants. The work associated with this report was from the follow-up of the Phase I Environmental Site Assessment conducted prior to the acquisition of the property. We are requesting a “no further action” letter from the Department on this issue.

With the changes in the Department’s closure/review fees, I am unsure of the dollar amount required to process these reviews. Therefore, if you would call me at 920-233-9592 with the required amount, we will submit a fee check.

Sincerely,

Don Draxler
Director, Environmental Affairs

Encl.

Re: Impacted Soil Excavation Documentation, Kewaunee Fabrications, L.L.C.
Building Expansion Area, 520 North Main Street, Kewaunee, Wisconsin --
WDNR BRRTS No. 02-31-282814 -- STS Project No. 4-26284XG

Dear Ms. Weissbach:

On behalf of Kewaunee Fabrications, L.L.C., a subsidiary of Oshkosh Truck Corporation, STS Consultants, Ltd. (STS), is providing you this letter-report in response to your request for information regarding the discovery of buried debris near the northeast portion of the Kewaunee Fabrications, L.L.C., building expansion area located at 520 North Main Street, Kewaunee, Wisconsin. This letter-report provides you with site background, soil remediation procedures, results of laboratory analytical testing, and a technical justification for no further action.

Background

On June 22, 2001, unsuitable fill material, consisting of various metal scraps, charred structural timbers, and rubble, was encountered during the excavation of footings for a building expansion project. STS was immediately retained by Kewaunee Fabrications, L.L.C., on June 22, 2001, to monitor the removal of the unsuitable fill material, collect waste characterization samples from the excavated soil, and also collect closure documentation samples at the excavation perimeter. The unsuitable fill material was likely generated from a fire, which had destroyed the Kewaunee Engineering facility (located on the subject property) on December 2, 1965. Kewaunee Fabrications, L.L.C., purchased the assets of Kewaunee Engineering, Inc., in November 1999.

On July 18, 2001, the confirmatory laboratory analytical results were received. Based on the analytical results indicating low concentrations of some petroleum-related compounds and PCB Arochlor 1254, the Wisconsin Department of Natural Resources (WDNR) was immediately notified by Kewaunee Fabrications, L.L.C., of a release via a "Release Notification Form" faxed to the Department.

Soil Remediation Procedures

Gauthier & Sons Construction, Inc. (Gauthier), Green Bay, Wisconsin, was retained by Kewaunee Fabrications, L.L.C., as the excavation and earthwork contractor for the building expansion project. Gauthier operators have received 40-hour OSHA hazardous site worker training and are capable of handling soil that is a characteristic solid waste.

During the building expansion project, Gauthier initiated excavation of the unsuitable fill material on June 22, 2001. Some additional over-excavation occurred in the northeast corner of the building expansion footprint on July 18, 2001. The unsuitable fill material that remained outside the expansion area footprint was excavated on October 2 and 3, 2001. STS provided an on-site environmental scientist to document all of the removal efforts. Unsuitable fill material, which appeared to be soil with some metal debris, was segregated and stockpiled separately from the unsuitable fill with a more "oily" appearance, characteristic of heavier petroleum constituents. A total of approximately 288 cubic yards (cyd) of unsuitable fill (with scrap metal only) were stockpiled east of the expansion project for recycling (metal removal) and re-use within the property boundary. Approximately 1,800 cyd of soil, which appeared impacted, was staged north of the expansion area on impermeable plastic membranes.

Composite soil analytical samples were collected from the stockpiled soils for waste characterization. Additional analytical samples were collected from discrete locations from the base and sidewalls of the excavation to document conditions at the excavation limits. Soil analytical samples were stored on ice and delivered under Chain of Custody control to U.S. Analytical Lab, Kimberly, Wisconsin (WDNR Lab Certification No. 445134030).

Composite waste characterization samples (collected from the stockpiled unsuitable fill) were analyzed for general characteristics including chlorine, reactive cyanide, reactive sulfide, and total solids. Physical parameters included free liquids, pH, specific gravity, and flashpoint. Toxicity characteristic leaching procedure (TCLP) analyses were performed for metals including arsenic, barium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, and zinc. TCLP analysis was also performed on 23 various volatile and semi-volatile compounds for waste disposal purposes. Other waste characterization analyses performed on the stockpiled unsuitable fill material included polychlorinated biphenyls (PCBs), cadmium, chromium, lead, semi-volatiles by EPA Method 8270C, and volatile organic compounds (VOCs) by EPA Method 8260B.

Closure samples were collected to document conditions at the excavation limits. The closure samples were submitted to the analytical laboratory for the analysis of PCBs, VOCs, and/or petroleum volatile organic compounds (PVOCs). The soil excavation and closure sample test locations are identified on Figure 1.

Analytical results from Stockpile Samples 1 and 2 (composite samples collected from the northern stockpile) indicated elevated concentrations of polynuclear aromatic hydrocarbons (PAHs), VOCs, and a detectable concentration of PCB Arochlor 1254 (5,900 micrograms per kilogram). Results of TCLP testing from the Stockpile Sample 1 location indicate that barium was detected at 2.5 milligrams per liter (mg/L), which is well below the characteristic hazardous waste level of 100 mg/L for barium, as established by Chapter s.NR 605.08, Wisconsin Administrative Code. None of the remaining metals, VOCs, or semi-volatiles were detected in the TCLP extract. Based on these results, the unsuitable fill material identified by Stockpile Samples 1 and 2 was not a characteristic hazardous waste.

5.9 ppm

Based on the results of waste characterization analyses that characterized the northern stockpile as a solid waste, the northern stockpile was transported to the ONYX/Superior's Hickory Meadows Landfill located in Hilbert, Wisconsin. A total of 2,454.35 tons of fill was loaded and hauled to the Hickory Meadows Landfill from September 26 through October 11, 2001. Hickory Meadows Landfill is a licensed solid waste facility.

The composite waste characterization sample collected from the Stockpile Sample 3 location (the eastern stockpile) did not indicate detectable concentrations of VOCs or PAHs. The Stockpile Sample 3 was collected from soil that was segregated from the remaining fill material as non-impacted soil with some metal debris only. Metal scraps from the eastern stockpile were removed and recycled. The eastern stockpile soil was then re-used as on-site fill.

Closure samples collected from the remedial excavation base and sidewalls indicated very low detectable concentrations of ethylbenzene, trimethylbenzene, and/or xylenes in Samples 6-22-2, 6-22-4, and 7-19-5. As indicated on Table 1A, these concentrations are below residual contaminant levels (RCLs) and risk-screening criteria as established by Wisconsin Administrative Code Chapters NR 720 and NR 746, respectively. The NR 720 RCLs and NR 746 table values are risk-screening criteria, which are protective of the leaching to groundwater and direct contact pathways. No other VOCs or PVOCS were detected in the remaining closure samples.

In closure Samples 6-22-2 and 10-2-1, PCB Arochlor 1254 was detected at 59 micrograms per kilogram ($\mu\text{g}/\text{kg}$) and 37 $\mu\text{g}/\text{kg}$, respectively. The EPA has established 1,000 $\mu\text{g}/\text{kg}$ as a Soil Screening Level (SSL) for total PCBs, which is protective of human health by direct contact ("Soil Screening Guidance: Technical Background Document" [EPA, 1996]). No PCB was detected in the remaining closure samples collected from the excavation perimeter. Soil analytical results are summarized on Table 1A. Additional waste characterization analyses of soil which was excavated and removed are summarized on Tables 1B and 1C.

Conclusions and Recommendations

While excavating for a building expansion project, unsuitable fill material and soil mildly impacted with petroleum and PCBs associated with a former fill area was observed. This soil (2,454.35 tons) was subsequently excavated and transported to ONYX/Superior Hickory Meadows Landfill, a licensed solid waste facility located in Hilbert, Wisconsin.

Based on the results of analytical closure samples collected from the limits of the excavation, residual concentrations are substantially below RCLs/SSLs for the leaching to groundwater and direct contact pathways. The PCB-1254 concentrations in Samples 6-22-2 and 10-2-1 are two orders of magnitude below the EPA SSL for total PCBs. Residual petroleum hydrocarbon concentrations are below NR 720 RCLs, which are protective of groundwater; and NR 746 table values, which are protective of human health by direct contact.

Based on the low solubility of PCBs in water and our experience in sampling groundwater for PCBs in various hydrogeologic settings, we typically would not expect to encounter PCBs dissolved in groundwater. PCBs have a strong affinity for soil particles, particularly the natural organic fraction of soil (as reflected in PCBs high organic carbon partition coefficient of 998,000 liters per kilogram). For other projects, members of the WDNR Northeast Region Case

Closure Committee have concurred with this finding. PCBs have not been detected in groundwater at sites having higher adsorbed PCB concentrations than those detected for this project. Based on the technical considerations presented above, we recommend no further testing to evaluate the presence of PCBs in the subsurface.

Based on the removal of that soil which contained petroleum-related compounds above their respective direct contact exposure and leaching to groundwater RCLs, we do not recommend additional environmental investigation. We also request that a "no further action" status letter be provided by the WDNR.

General Qualifications

STS was retained by Kewaunee Fabrications, L.L.C., to conduct documentation services for soil conditions near the building expansion project location in Kewaunee, Wisconsin. This letter-report was prepared to summarize sample collection and observations made during removal of unsuitable fill, describe procedures, and present results of laboratory testing. No other warranty, either expressed or implied, is made.

Conditions and conclusions presented in this letter-report are based on site observations and results of laboratory tests performed on collected soil samples. The scope of this report is limited to the specific project and location described herein. Our description of the project represents our understanding of the significant aspects relative to soil conditions. This information should not be used for purposes other than intended.

If you have any questions regarding this project, please contact us at (920) 468-1978.

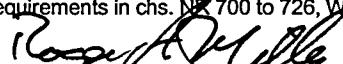

Respectfully,

STS CONSULTANTS, LTD.

Re: Results of Phase II Subsurface Assessment, Kewaunee Fabrications, L.L.C., 520 North Main Street, Kewaunee, Wisconsin -- STS Project No. 4-26933XF

Dear Mr. Draxler:

STS Consultants, Ltd. (STS), conducted a Phase II Subsurface Assessment (Phase II) at the Kewaunee Fabrications, L.L.C. (Kewaunee Fabrications) plant located at 520 North Main Street, Kewaunee, Wisconsin (site). Kewaunee Fabrications is a wholly owned subsidiary of Oshkosh Truck Corporation (Oshkosh Truck), Oshkosh, Wisconsin. This site was purchased by Kewaunee Fabrications in November 2000. This report presents background information, outlines field-sampling procedures, summarizes analytical data, and provides recommendations for further action.

1.0 BACKGROUND

As a follow up to a Phase I Environmental Site Assessment (Phase I ESA) conducted by Braun Intertec prior to the purchase of the property, Oshkosh Truck/Kewaunee Fabrications, desired a subsurface assessment in two areas of the site: (1) soil quality in vicinity of a former 21,000-gallon capacity underground storage tank (UST) inside the plant and (2) groundwater quality on the anticipated down gradient (south) side of the site.

Based on information from the Phase I report, we understand that the former 21,000-gallon UST was removed prior to 1974. According to accounts in the report, "The tank removal was witnessed by several employees ... All witnesses commented that the tank was in excellent shape and was taken by the tank removal contractor for resale." Because this work was completed prior to enactment of Wisconsin Administrative Code, ILHR 10 (now referred to as Comm 10) in the late 1980s, no UST site assessment sampling was required or completed at the time of the removal.

On July 19, 2001, STS was contacted and requested a proposal for installing seven Geoprobe borings at Kewaunee Fabrications: five borings along the south edge of the plant with temporary monitoring wells and one boring on each end of the location of the former UST in the plant. The Braun Phase I ESA provided some suggestion about possible sampling locations. The actual

sampling locations with the exception of Boring TMW-8, which was added in the field based on information described below, were suggested by Mr. Don Draxler.

2.0 PROCEDURES

On August 8, 2001, STS retained Environmental Drilling Services (EDS) of De Pere, Wisconsin, to advance eight Geoprobe soil borings at the locations indicated on Figure 1. Because of field observations of petroleum impacts (petroleum odor and photoionization detector [PID] readings above background) in soil samples from GP-7 (inside of the building), TMW-8 was completed outside of the building to evaluate the potential for petroleum impacts to extend south of GP-7. Soil samples were collected at continuous 2-foot-depth intervals to the termination depth of each boring. At least one soil sample from each boring was submitted to a Wisconsin-certified analytical laboratory for chemical analysis. The samples were submitted to U.S. Analytical Laboratories (U.S. Analytical) in Kimberly, Wisconsin, for analysis of one or more of the following compounds: diesel range organics (DRO), volatile organic compounds (VOCs), and polynuclear aromatic hydrocarbons (PAHs).

Soil boring logs documenting the installation of the soil borings and temporary monitoring wells are included in Appendix A. Laboratory analytical test reports are included in Appendix B. Field observations, such as PID readings, soil descriptions, moisture content, and detections of staining or odor, are noted on Table 1 in Appendix A.

Soil Borings TMW-1, TMW-2, TMW-3, TMW-4, TMW-5, and TMW-8 were converted to temporary groundwater monitoring wells using 1-inch-diameter Schedule 40 polyvinyl chloride (PVC), with a pre-slotted well screen. The wells were developed after installation on August 8, 2001. After allowing two days for well stabilization, an STS field crew mobilized to the site and collected water level measurements and groundwater samples from the temporary monitoring wells. The groundwater samples were submitted to U.S. Analytical for VOC analysis. Groundwater analytical reports are included in Appendix B, and groundwater field and analytical data is summarized on Table 3 in Appendix A. After completion of the soil and/or groundwater sampling, the soil borings and temporary monitoring wells were properly abandoned. Abandonment forms, which document the completed borings, are also included in Appendix A.

3.0 RESULTS

3.1 General Soil Observations

Soil samples recovered from the borings indicate that soils on the site are primarily composed of approximately 4 to 8 feet of fill, consisting of light brown silty sand with traces of clay and fine gravel, which overlies black organic peat and interbedded layers of peat and brown silty sand. Soil borings were advanced to depths of up to 10.5 feet on the site. The fill in Boring GP-6, completed near the suspected former UST, extended to a depth of 10 feet, whereas the fill in Boring GP-7 extended to a depth of about 4 feet. Therefore, it appears that soil Boring GP-6 may have been performed within a backfilled excavation area, but GP-7 was likely advanced beyond the perimeter of a backfilled excavation.

Field observations summarized on Table 1 in Appendix A indicate there was no field evidence (odors, staining, or elevated PID readings) of petroleum impacts in soil Borings TMW-1, TMW-2, TMW-4,

TMW-5, GP-6, and TMW-8. Slight petroleum odors and staining were observed in soil samples from Borings TMW-3 and GP-7; however, as described below, soil analytical results from these borings yielded no Wisconsin Administrative Code soil exceedances and in most cases analytical concentrations were below method detection limits.

3.2 Soil Analytical Results

Analytical results are summarized on Table 2 in Appendix A. Soil VOC results are on the top portion of Table 2 in Appendix A and DRO/PAH results are on the bottom portion. In general, soil samples selected for analysis were recovered at depths above the groundwater table or at locations with field indications of petroleum impacts (elevated PID readings, odor, and staining).

3.2.1 Soil VOC Analytical Results

With the exception of samples from GP-7, no VOCs were detected above method detection limits (MDL) in the analyzed soil samples. Concentrations of Wisconsin-regulated VOCs detected in samples from GP-7 (see summary table below) were below the regulatory values established in Wisconsin Administrative Code Chapter NR 746, Table 1 Soil Screening Values.

GP7 wet at 41

Soil VOC Summary Table

Compound	Sample Concentrations (ug/kg)		NR 746 Table 1 Value (ug/kg)
	GP-7,S-3	GP-7,S-4	
sec-butylbenzene	ND	110	NR
tert-butylbenzene	ND	310	NR
n-butylbenzene	ND	35	NR
naphthalene	63	130	2,700
p-isopropyltoluene	ND	41	NR
n-propylbenzene	ND	60	NR
1,2,4-trimethylbenzene	ND	160	83,000
1,3,5-trimethylbenzene	ND	56	11,000

ND = not detected

NR = not regulated

μg/kg = micrograms per kilogram

3.2.2 Soil PAH/DRO Analytical Results

Soil samples from Borings GP-6, GP-7, and TMW-8 (near the former UST) and TMW-5 (recommended in Braun report) were submitted for PAH analysis. No PAHs were detected above the MDL in samples from TMW-5 and GP-6. Concentrations of the PAH compounds detected in samples from GP-7 and TMW-8 were below suggested residual contaminant levels (RCLs), which are provided in the 1997 Wisconsin Department of Natural Resources (WDNR) Interim Guidance on PAHs. The "j" flag indicates that the detected analyte concentrations were between the MDL and limit of quantitation (a statistical value).

Soil PAH Summary Table
Sample Concentrations (µg/kg)

	GP-7 S-3	GP-7 S-4	TMW-8 S-3	Guidance Value
acenaphthene	41 (j)	68	ND	38,000
anthracene	20 (j)	19 (j)	ND	3,000,000
chrysene	ND	ND	10 (j)	8,800
fluoranthene	ND	13 (j)	ND	500,000
fluorene	62	100	ND	100,000
1-methylnaphthalene	610	770	ND	23,000
2-methylnaphthalene	710	920	ND	20,000
naphthalene	170	150	ND	400
phenanthrene	150	270	13 (j)	1,800
pyrene	ND	39 (j)	ND	500,000

Soil samples from TMW-3 and GP-7 (slight petroleum odors) were submitted for DRO analysis. DRO concentrations were below the MDL in soil samples from TMW-3 and GP-7, S-3. The 58 milligrams per kilogram (mg/kg) detection of DRO in Sample GP-7, S-4 was below the Wisconsin Administrative Code Chapter NR 720 groundwater pathway RCL.

3.3 Groundwater Field Observations and Analytical Results

Groundwater depth measurements and analytical test results are summarized on Table 3 in Appendix A. Table 3 indicates that no VOCs were detected above the MDLs in the water samples obtained from the monitoring wells. Accordingly, groundwater analytical concentrations are all below Chapter NR 140, Wisconsin Administrative Code, preventive action limits (PALs) for VOCs.

4.0 CONCLUSIONS AND RECOMMENDATIONS

The only borings that had soil and/or water samples with VOC or PAH detections were GP-7 and TMW-8. However, for the detected compounds that are regulated in Wisconsin, the concentrations were below Wisconsin NR 746 values or 1997 suggested guidance values. Therefore, STS recommends no further site assessment, no active remediation, and that the analytical results from the borings in the vicinity of the former UST be submitted to the WDNR, along with a request for "no further action" on the site.

LOD Limit of Detection

"J" Flag: Analyte detected between LOD and LOQ

LOQ Limit of Quantitation

Code Comment

- 1 All laboratory QC requirements were met for this sample.
- 3 The spike recovery failed to meet acceptable QC limits.
- 4 The check standard failed to meet acceptable QC limits.

Re: Kewaunee Fabrications, L.L.C.
WDNR BRRTS #02-31-282814

Dear Ms. Weissbach:

This letter is written on behalf of Kewaunee Fabrications, L.L.C., which is a wholly owned subsidiary of Oshkosh Truck Corporation. The purpose of this letter is to provide you with an update on the above-referenced project. A project report is currently being prepared by STS Consultants, Ltd. STS has been involved in the project, since the discovery of a potential hazardous substance during the excavation for a building expansion.

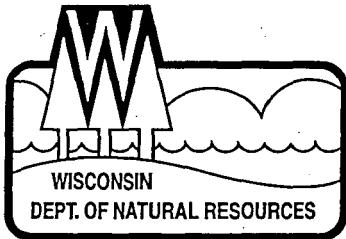

I anticipate submitting the report to you within the next 30 days. If you have any questions, in the meantime, please call me at 920-233-9592. Thank you.

Sincerely,

A handwritten signature of "Don Draxler" is written over a typed name "Don Draxler / AB".

Subject: Reported Contamination at Kewaunee Fabrications, LLC, 520 No. Main Street,
Kewaunee, Wisconsin
WDNR BRRTS # 02-31-281814

Dear Mr. Gehring:

On July 18, 2001, you, on behalf of Kewaunee Fabrications, LLC, notified the Department of Natural Resources (WDNR) that petroleum contamination had been detected at the site listed above.

Based on the information submitted to the WDNR, we believe you are responsible for restoring the environment at the referenced site under Section 292, Wisconsin Stats., known as the hazardous substances spills law.

This letter describes your legal responsibilities, explains what you need to do to investigate and clean up the contamination, and provides you with information about cleanups, environmental consultants, possible financial assistance, and working cooperatively with the WDNR and Department of Commerce (Commerce).

Legal Responsibilities:

Your legal responsibilities are defined both in statute and in administrative codes. The hazardous substances spill law, Section 292.11 (3) Wisconsin Statutes, states:

- **RESPONSIBILITY.** A person who possesses or controls a hazardous substance which is discharged or who causes the discharge of a hazardous substance shall take the actions necessary to restore the environment to the extent practicable and minimize the harmful effects from the discharge to the air, lands, or waters of the state.

Wisconsin Administrative Code chapters NR 700 through NR 749 establish requirements for emergency and interim actions, public information, site investigations, design and operation of remedial action systems, and case closure. Chapter NR 708 includes provisions for immediate actions in response to limited contamination. Wisconsin Administrative Code chapter NR 140 establishes groundwater standards for contaminants that reach groundwater.

Steps to Take:

The longer contamination is left in the environment the farther it can spread and the more it may cost to clean up. Quick action may lessen damage to your property and neighboring properties and reduce your costs in investigating and cleaning up the contamination. To ensure that your cleanup complies with Wisconsin's laws and administrative codes, you should hire a professional environmental consultant who understands what needs to be done. These are the first three steps to take:

1. Within the next **30 days of the date of this letter**, you must submit written verification (such as a letter from the consultant) that you have hired an environmental consultant.
2. Within the next **60 days of the date of this letter**, your consultant must submit a workplan and schedule for the investigation. The consultant must follow the WDNR administrative codes and technical guidance documents. To facilitate prompt agency review of your reports, your consultant should use the site investigation and closure formats which are available on-line at www.dnr.state.wi.us.

Once an investigation has established the degree and extent of contamination involved at your site, your consultant will be able to determine whether Commerce or the WDNR has authority over the case.

3. Within 30 days of completion of the site investigation, you or your consultant must provide a brief report at least every 90 days per NR 724.13(3). Quarterly reports need only include one or two pages of text, plus any relevant maps and tables. Should conditions at your site warrant, we may require more frequent contacts.
4. When the site investigation is complete, NR 716.15(1) requires that you or your consultant submit to the WDNR a full report (within 30 days of completion of the report) on the extent and degree of soil and groundwater contamination and a proposal for cleaning up the contamination.
5. After the appropriate remedial action has been implemented and there is no threat to human health or the environment, you or your consultant may apply for closure (no further action required) to the WDNR.
6. Sites where discharges to the environment have been reported are entered into the Bureau for Remediation and Redevelopment Tracking System (BRRTS), a version of which appears on the WDNR's Internet site. You may view the information related to your site at any time (<http://www.dnr.state.wi.us/org/aw/rr/brrts>) and use the feedback system to alert us to any errors in the data.

If you request a formal response from the agency on a specific submittal, please be aware that a review fee is required in accordance with s. NR 749, Wis. Adm. Code. If a fee is not submitted with your reports, you should proceed under the advice of your consultant to complete the site investigation to maintain your compliance with the spills law and chs. NR 700 through NR 749. **Do not delay the investigation of your site by waiting for an agency response.** We have provided detailed technical guidance to environmental consultants. Your consultant is expected to know our technical procedures and administrative codes and should be able to answer your questions on meeting cleanup requirements.

All correspondence regarding this site should be sent to:

Annette Weissbach
Remediation and Redevelopment Program
Wisconsin Department of Natural Resources
P. O. Box 10448
Green Bay, WI
920/492-5865

Unless otherwise requested, please send only one copy of plans and reports. To speed processing, correspondence should reference the BRRTS and FID numbers (if assigned) shown at the top of this letter.

Additional Information for Site Owners:

Information to help you select a consultant, review the contractor list, help control costs is enclosed. In addition, *Fact Sheet 2 - Voluntary Party Remediation and Exemption from Liability* is enclosed and provides information on obtaining protection of limited liability under s. 292.15, Stats.

Financial Assistance:

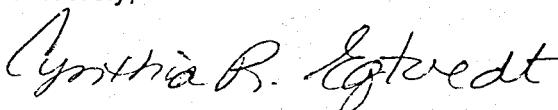

Reimbursement from the Petroleum Environmental Cleanup Fund (PECFA) is available for some of the costs of cleaning up contamination from eligible petroleum storage tanks. Please refer to the enclosed information sheet entitled *Information About PECFA* for more information on eligibility and regulations for this program. For more information on the PECFA program, please call the Department of Commerce at 608-266-2424 or visit their web site at <http://www.commerce.state.wi.us/ER/ER>.

Drycleaning Sites:

Funding is also available for cleanup at some drycleaning sites.

Thank you for your cooperation. Call Ms. Weissbach for more information on eligibility or visit the RR web site <http://www.dnr.state.wi.us/org/aw/rr>. You may also contact this person for all other questions regarding this letter.

Sincerely,

Cynthia R. Egtvedt

MESSAGE:

Dear Cynthia,

On behalf of Kewaunee Fabrications, LLC, which is a wholly owned subsidiary of Oshkosh Truck Corporation, I am faxing you a copy of the analytical data on the soil samples collected for the above referenced site. It was my understanding that this material had already been submitted to you. If that is not the case, I apologize. If after you or another member of your staff has a chance to review this information and would like to discuss the project, please call me. I can be reached at (920) 233-9592. Thank you.

Sincerely,

A handwritten signature in black ink, appearing to read "Don Draxler".

RE: **KEWAUNEE FABRICATIONS, LLC**

Date of Fax Notification: July 18, 2001

Dear Mr. Gehring:

The Wisconsin Department of Natural Resources is unable to open any cases without the lab results. Your fax notification indicated samples were sent to U. S. Analytical on June 22, 2001. Please forward all applicable analytical data to this office as soon as possible and we will review the case status at that time.

Continued delays in forwarding pertinent information will hamper the future closure of this site. Our project managers need to be made aware of your proposals for the remediation of the site to be able to make informed decisions regarding possible deed restrictions to the property.

Thank you for your prompt attention to this matter.

Sincerely,

Cynthia R. Egtvedt
Program Assistant
Bureau for Remediation and Redevelopment

State of Wisconsin
Department of Natural ResourcesHazardous Substance Release Fax Notification
(Non-Emergency Only)

Form 4400-225 (7/01) Page 1 of 2

Emergency situations should be reported via the 24-hour Spill Hotline: 1-800-943-0003

Notice: Hazardous substance discharges must be reported immediately according to the "Spills Law", s. 292.11, Wis. Stats. Section NR 706.05(1)(b), Wis. Adm. Code requires that hazardous substance discharges are to be reported by one of three methods: telephoning the Department (toll free Spill Hotline number above), telefaxing a report to the Department or visiting a Department office in person. If you choose to notify the Department by telefax, you should use this form to be sure that all necessary information is included. However use of this form is not mandatory. Under s. 292.99, Wis. Stats., the penalty for violating ch. 292, Wis. Stats., shall be no less than \$10 nor more than \$5000 for each violation. Each day of continued violation is a separate offense. It is not the Department's intention to use any personally identifiable information from this form for any purpose other than program administration. However, information submitted on this form may also be made available to requesters under Wisconsin's Open Records Law (ss. 19.31 – 19.39, Wis. Stats.).

Confirmatory laboratory data should be included with this form, if available, to assist the DNR in processing this Hazardous Substance Release Notification.

Complete this form. **TYPE or PRINT LEGIBLY.** FAX it to the appropriate WDNR region (see next page) **IMMEDIATELY** upon discovery of a potential release to the environment from (check one):

- Underground Petroleum Storage Tank System
 Aboveground Petroleum Storage Tank System
 Dry Cleaner Facility (DERP eligibility based on: Facility owner/operator Property owner of licensed facility
 Other - Describe: discovery of a historical fill site

Identify and estimate the quantity of the hazardous substance discharged (check all that apply):

- | | |
|--|--|
| <input type="checkbox"/> Unleaded gasoline _____ gallons | <input type="checkbox"/> Fuel oil _____ gallons |
| <input type="checkbox"/> Leaded gasoline _____ gallons | <input type="checkbox"/> Waste oil _____ gallons |
| <input type="checkbox"/> Diesel _____ gallons | <input type="checkbox"/> Stoddard solvent _____ gallons |
| <input type="checkbox"/> Perchloroethylene _____ gallons | <input checked="" type="checkbox"/> Other: (Specify below) |

Debris from facility fire during the mid 1960's

Impacts to the environment (enter "K" for known/confirmed or "P" for potential for all that apply)

- | | |
|--|--|
| <input type="checkbox"/> Fire/explosion threat | <input checked="" type="checkbox"/> Soil contamination |
| <input type="checkbox"/> Contaminated private wells (# of wells) _____ | <input type="checkbox"/> Surface water impacts |
| <input type="checkbox"/> Contaminated public wells | <input type="checkbox"/> Floating product |
| <input checked="" type="checkbox"/> Groundwater contamination | <input type="checkbox"/> Other (Describe below) |

Contamination was discovered as a result of:

- Tank closure assessment Site assessment
 Other - Describe below

On what date?

6/22/01- Facility Expansion Project

Additional Comments: Include a brief description of immediate actions taken to halt the release and contain or cleanup hazardous substances that have been discharged.

- Debris from fire was excavated from areas that would be underneath the building expansion. The debris was then stockpiled on Visqueen. ~~Soil~~ Samples were collected of the waste and area beneath the waste and sent to the laboratory (U.S. Analytical) for analysis on 6/22/01.
