**BRRTS # 02-38-000186**

Dear Mr. Scrabis:

On June 19, 2012, the Wisconsin Department of Natural Resources denied closure for the case referenced above. Closure was denied because it was determined that additional groundwater monitoring was needed to determine the extent of contamination and establish a trend to allow natural attenuation to be used as the remedial alternative. Additionally, as part of the closure requirement, a cap maintenance plan is needed and an Appendix A letter to be sent to the property owner. On January 18, 2013, a draft of the Appendix A letter was received and approved on January 23, 2013. Since that date, no submittals have been received.

Please respond to this letter by June 30, 2014, as to the status of this case.

If you have questions, you may contact me by phone at 920-662-5164 or e-mail at [Robert.Klauk@wisconsin.gov](mailto:Robert.Klauk@wisconsin.gov).

Sincerely,

Robert H. Klauk  
Hydrogeologist
