Re: 761.61(c) Application for Risk Based Disposal
We Energies Gas Main Replacement Project, Amcast Residential Yards, Park Lane and Spring Street, Cedarburg, WI

Dear Mr. Ramanauskas,

On behalf of Wisconsin Electric Power Company (dba We Energies) we respectfully submit this application under 40 CFR § 761.61(c) to dispose of soils generated during gas main replacement activities within the Amcast Residential Yards portion of the Amcast Industrial Superfund Site (US EPA ID WIN000510210; Site ID 0510210; and Wisconsin Department of Natural Resources [WDNR] BRRTS# 02-46-000795). Soils in this residential neighborhood are regulated under TSCA based on polychlorinated biphenyl (PCB) source concentrations from the Amcast Industrial Superfund Site. We are requesting a risk based approval to dispose of soils based on their as-found concentrations of <50 parts per million (ppm) at a non-Toxic Substances Control Act (TSCA) regulated disposal facility.

We Energies understands that the Amcast Residential Yards site is bounded by Hamilton Road on the west, Park Lane on the south, and Wilshire Drive on the east. The gas service main in this neighborhood is nearing the end of its useful life expectancy (60+ years) and replacement is needed to preserve service to our customers and maintain a safe and reliable distribution network. In order to replace the gas service main in this area, We Energies anticipates new service lines will be installed by trenching in the locations depicted in the attached figure. We intend to dispose of spoils generated within the Amcast Residential Yards site through this process and with your approval.

A sampling plan for a subsurface soil investigation was approved by you via email on November 12, 2021. This investigation was completed along the proposed gas main installation route during late November 2021 by Kapur Inc. on behalf of We Energies. The purpose of the investigation was to assess soils to be managed within the Amcast Residential Yards site for PCB content and collect data for waste characterization. The following section describes the history of impact, the investigation, and the proposed management plan.

761.61(c) Application for Risk Based Disposal

We Energies provides the following items as required in 40 CFR § 761.61(a)(3):

> Nature of Contamination – Soil sampling performed during 2003, 2005 and 2007 in the residential neighborhood to the south and west of the Amcast North site indicated concentrations of PCBs in soil on the residential properties ranging from non-detect to 79 ppm. Results of this investigation were summarized in a Remedial Investigation / Feasibility Study by CH2M Hill dated April 2013.

Procedures Used for Sampling – As noted in the attached Environmental Activities Update prepared by Kapur Inc., a total of 22 soil borings were installed using direct push methodology along the route of the proposed gas main installation. Two samples (one shallow, one deep) from each boring were sent for PCB analysis. Select samples were submitted for laboratory analysis of volatile organic compounds (VOCs) and Diesel
Range Organics (DRO). A composite sample for landfill waste characterization was submitted for laboratory analysis of Protocol B, Gasoline Range Organics (GRO), and DRO. A map depicting the sample locations and table summarizing the analytical results are included in the attachment.

Location and Extent of the Contaminated Area – Based on the analytical results, PCBs were detected at concentrations exceeding 1.0 ppm at two locations: SB-1 (0-2') at 1.4 ppm and SB-9 (2-4') at 4.4 ppm. Concentrations greater than 1.0 ppm result in these soils being regulated under TSCA. Both these samples were located near the intersection of Park Lane and Wilshire Drive. All other results were below 1.0 ppm.

Cleanup Plan for the Site – We Energies anticipates managing generated materials by disposing all generated spoils at a Non-TSCA, Resource Conservation and Recovery Act (RCRA) Subtitle D regulated landfill. We Energies is not engaged in the cleanup of the larger Amcast Industrial Site and will only manage materials generated during trenching associated with the gas main replacement project within the Amcast Residential Yards.

Written Certification – We Energies certifies that all sampling plans, sample collection procedures, sample preparation procedures, extraction procedures, and chemical analysis procedures used to assess and characterize PCB contamination are on file within our internal document management system and will be available upon request for EPA inspection.

We Energies respectfully requests approval of this application to manage materials generated during the gas main replacement project in the Amcast Residential Yards at Park Lane and Spring Street, Cedarburg, WI at a Non-TSCA, RCRA Subtitle D landfill.

Please don't hesitate to contact me at marita.stollenwerk@wecenergygroup.com or 414-221-4172 with any questions.

Respectfully,

Marita D. Stollenwerk, P.G.
We Energies

WE ENERGIES WORK REQUEST ENVIRONMENTAL NOTES (Notes 1 through 7 apply to ALL work requests)

General

1. If WDNR and/or USACE permits were obtained for the project, all permit conditions shall be met during construction of the project.

Erosion Control

2. If soil disturbance occurs on slopes or channels/ditches leading to wetlands or waterways, or within wetlands, the disturbed areas shall be stabilized and appropriate erosion control Best Management Practices (BMP's) shall be implemented.
3. Erosion Control BMR's shall meet or exceed the approved WDNR Storm Watter Management Technical Standards (http://dnr.wi.gov/topic/stormwater/standards/const_standards.html). Refer to We Energies Construction Site Sediment and Erosion Control Standards.
4. Inspect installed erosion control BMP's at least one time per week and after ½" rain events: repair as necessary.
5. When temporary stabilization is required (e.g. for winter or short-term construction) prior to final restoration, soil stabilizer shall be installed wherever possible. Erosion mat shall be used temporarily only where appropriate, in accordance with state standards, and when approved by the Operations Supervisor.

Contaminated Soils

6. Whenever soil exhibiting obvious signs of contamination (e.g., discoloration, petroleum or solvent odor, free liquids other than water, buried containers or tanks, or other obvious signs of environmental impacts) is encountered during excavation or installation, cease work immediately, take appropriate immediate precautions to ensure worker health and safety, and contact the Operations Supervisor or Inspector.

Spills

7. If an oil spill occurs during construction, call the Environmental Incident Response Team (EIRT) at 414-430-3478:
   a. Any quantity of oil is spilled into surface water;
   b. Any oil spill greater than 50 ppm PCB into a sewer, vegetable garden, or grazing land;
   c. Any oil spill containing greater than 500 ppm PCB;
   d. Five gallons or more of oil spilled to the ground;
   e. Any oil spill involving a police department, fire department, DNR, or concerned property owner.

Notes 8 through 27 apply as noted at specific points within each work request:

Dewatering

8. Dewatering of pits or trenches shall be done in accordance with state standards. Use an approved sediment bag, a straw bale dewatering basin, a combination of both, or equivalent.

Wetlands

9. As much as practicable, the majorityof the work shall be staged from the public roadways and road shoulders, keeping equipment out of adjacent wetlands.
10. All work shall be conducted to minimize soil disturance. No rutting will be allowed within the wetlands.
11. If soils are not frozen or stable to a point that avoids rutting, timber mats, mud tracks, or equivalent shall be utilized to access pole locations.
12. Excavated soils cannot be stockpiled in wetlands.

Waterways

13. All excess spoils shall be removed from wetlands and placed in a suitable upland location.
14. Trenching and pit excavations within wetlands shall include soil segregation to facilitate restoration of pre-construction soil stratification, and restoration to pre-construction elevations.
15. Poles scheduled to be removed, and that occur within wetland, shall be cut at the ground surface.
16. No work can be performed within the banks or below the ordinary high watermark of any navigable waterways/streams.
17. No crossing of navigable waterways with equipment can occur. Foot traffic is allowed.
18. Any disturbed soil within 75-feet of the ordinary high water mark of any navigable waterways/streams shall be stabilized within 24 hours of construction completion.

Threatened and Endangered Speclies

19. Threatened or endangered species are known to occur in the work area. It is illegal to harass, harm, or kill a protected species under state and federal regulations. Proper precautions shall be taken to ensure harm to individuals is avoided.
20. In order to protect the threatened or endangered species, work must be conducted between November 5 and March 15.
21. Exclusion fencing must be installed at the work area prior to March 15.
22. A qualified biologist must be present when conducting work at this location.

Invasive Species

23. State regulated invasive species are known to occur in the work area. Reasonable precautions are legally required to prevent the spread of these species. The Wisconsin Council on Forestry Transportation and Utility Rights-of Way Best Management Practices should be followed: (http://council.wisconsinforestry.org/invasives/transportation/).

Cultural and Historical Resources, cont.

24. The project is within or adjacent to an area that is identified by the State of Wisconsin as potentially having Native American artifacts, burial mounds or burial sites, which could be encountered during construction.
25. If human bone or any artifacts are discovered during construction, work must cease immediately. Contact the Environmental Department who will contact the State Burial Sites Preservation Office and determine the next steps that must be taken in order to comply with state law. Work at that site MAY NOT PROCEED until the Environmental Department authorizes it.
26. A "qualified archaeologist," as specified under Wis. Stats 157.70 (1) (i) and Wis. Admin. Code HS 2.04 (6), must be present to monitor all ground disturbing activities.

Frac-out Contingency Plan

27. A frac-out contingency plan shall be on-site and implemented accordingly. The contingency plan shall incorporate the following components.
    a. Continuously inspect the bore paths for frac-outs in order to respond quickly and appropriately.
    b. Containment materials (e.g. silt fence, straw bales, sand bags, etc.) shall be on site and available should a frac-out occur.

RE: Environmental Activities Update
Cedarburg Gas Main Replacement
IO # MRO47502106, WR # 4522881/4705061
Park Lane and Spring Street
Cedarburg, WI 53012

Dear Ms. Stollenwerk,

Kapur Inc. (Kapur) has completed the installation of geoprobe soil borings and environmental soil sampling for the above referenced work request.

Site Background:

The residential properties located along Park Lane, Burr Lane and Wilshire Drive are all located within the Amcast Industrial Corporation EPA Superfund Site (U.S. EPA ID WIN000510210; Site ID 0510210 and WDNR BRRTS# 02-46-000795) and are identified as the Residential Yards (CH2M Hill Figure 1-1). This area has been historically impacted by PCB laden oils used for dust suppression. We Energies is proposing to replace the gas mains in this area due to the age of the existing gas mains. Sampling was conducted to provide PCB disposal information.

Activities Conducted:

On November 29, 2021, Kapur supervised the installation of twenty-two (22) soil borings, SB-1 through SB-22, by Horizon Construction and Exploration of Fredonia, Wisconsin. The borings were advanced using a Geoprobe within the project corridor to a maximum depth of four (4) feet below ground surface (ft bgs). A total of forty-four (44) soil samples from SB-1 through SB-22 were field screened using a photoionization detector (PID). Soil samples were submitted to Pace Analytical (Pace) of Green Bay, Wisconsin (Wisconsin Department of Natural Resources (WDNR) Certification #: 405132750) for laboratory analysis of polychlorinated biphenyls (PCBs). Select samples were submitted for laboratory analysis of volatile organic compounds (VOCs) and Diesel Range Organics (DRO). A composite sample for landfill waste characterization was submitted to Pace for laboratory analysis of Protocol B, Gasoline Range Organics (GRO), and DRO. Field observations and laboratory analytical results of the soil investigation indicated:

- The soils located at the site include topsoil or asphalt to a depth of approximately one (1) foot over fill (sand and gravel fill or clay with sand fill), over native material composed of mostly silt and silt with clay, with layers of sand, sandy clay, and/or silty sand to a maximum boring depth of four (4) feet bgs.
- Unidentified odors were noted in SB-15 (0-2') and SB-17 (0-2'). No obvious odor or staining was noted during the remaining soil boring activities.
- PID readings remained below background levels (<10 parts per million by volume in air (ppmv)) during soil boring activities in all soil borings except SB-20.
    - The greatest PID readings were observed in soil boring SB-20, with the greatest reading observed in the 0-2 ft bgs interval (13.0 ppmv). The PID reading decreased to 1.1 ppmv in the 2-4 ft bgs sample interval.

Analytical Results:

Laboratory analysis of soil indicated:

- Of the PCBs:
    - Soil impacted with Total PCBs exceeding 1.0 ppm is located at the intersection of Park Lane and Wilshire Drive in soil borings SB-1 (0-2') and SB-9 (2-4'). All other results were below 1.0 ppm
    - PCB-1248 was detected above the applicable ch. NR 720 Industrial Direct Contact RCLs and the applicable EPA Resident Regional Screening Levels (RSL).
    - PCB-1254 was detected above the applicable ch. NR 720 Non-Industrial Direct Contact RCLs and the applicable EPA Resident RSL.
- DRO:
    - DRO was detected at a maximum concentration of 266 mg/kg. There is no established standard for DRO.

Laboratory analysis of waste characterization soil indicated:

- Protocol B:
    - There were no TCLP exceedances of any Protocol B parameter analyzed.
- GRO:
    - GRO was detected below the laboratory reporting limits (LRLs). There is no established standard for GRO.
- DRO:
    - DRO was detected at a maximum concentration of 243 mg/kg. There is no established standard for DRO.

Borehole locations can be found on WR 4705061 Sketch. Soil boring results can be found in Table 1 and the composite landfill waste characterization sample results can be found in Table 2. Field forms, soil boring logs and abandonment forms can be found in Appendix A. Soil laboratory analytical reports can be found in Appendix B.

Conclusions:

Soil impacted with PCBs were identified exceeding applicable ch. NR 720 standards and EPA Resident RSLs site wide, primarily along Park Lane and Burr Lane. The exceedances decreased with depth in all soil borings except for SB-9.

Soil impacted with Total PCBs exceeding 1.0 ppm is located at the intersection of Park Lane and Wilshire Drive in soil borings SB-1 (0-2') and SB-9 (2-4'). All other results were below 1.0 ppm.

The composite landfill waste characterization sample had no TCLP exceedances for any of the parameters analyzed via Protocol B. The Total PCB concentration was below 1.0 ppm.

Recommendations:

As this work was conducted in an area of a known EPA Superfund Site, Amcast Industrial Site (U.S. EPA ID WIN000510210; Site ID 0510210 and WDNR BRRTS # 02-46-000795), notification of the soil sampling results to the EPA and current consulting firm is recommended.

If you have any questions or concerns, please feel free to reach me at the office (414) 410-5206.

Sincerely,

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

NA = Not Analyzed

NR = Not Reported/Below Detection Limits

mg/kg = milligrams per kilogram equal to parts per million (ppm)

RCL = Residual Contaminant Level

RSL = Regional Screening Level

Soil Classification:

CL = Clay of low plasticity

MH = Elastic silt

ML = Silt

SC = Clayey sand

SM = Silty sand

SP = Poorly graded sand

SW = Well graded sand, fine to coarse

Only analytes with a detection in at least one sample are shown
(2-3) = sample depth in feet below ground surface
PID - Photoionization Detector
ppmv = parts per million by volume in air
* = concentration is above RCL but below Background Threshold
Concentrations equal to or exceeding the NR 720 Soil RCL Industrial Direct Contact Standards are in **red bold**
Concentrations equal to or exceeding the NR 720 Soil RCL Non-Industrial Direct Contact Standards are in **blue bold**
Concentrations equal to or exceeding the NR 720 Soil RCL (via EPA RSLs) Soil to Groundwater Standards are in **[brackets]**
J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
NA = Not Analyzed

NR = Not Reported/Below Detection Limits
mg/kg = milligrams per kilogram equal to parts per million (ppm)
RCL = Residual Contaminant Level
NA = Not Analyzed

Soil Classification:
CL = Clay of low plasticity
MH = Elastic silt
ML = Silt
SC = Clayey sand
SM = Silty sand
SP = Poorly graded sand
SW = Well graded sand, fine to coarse

RE: Project: 22.0114 WE CEDARBURG WR4705061
Pace Project No.: 40237575

Dear Ashley Wagner:

Enclosed are the analytical results for sample(s) received by the laboratory on November 30, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Green Bay
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

ANALYTICAL RESULTS

Project: 22.0114 WE CEDARBURG WR4705061
Pace Project No.: 40237575

Sample: SB-8 (0-2) **Lab ID: 40237575015** Collected: 11/29/21 10:44 Received: 11/30/21 08:25 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: 22.0114 WE CEDARBURG WR4705061
Pace Project No.: 40237575

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1q	Use of method EPA 1010A for flash point analysis on solid samples is for informational purposes only. It is the user's responsibility to verify the acceptance of this data for intended use.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
DC	Chromatographic pattern inconsistent with typical Diesel Fuel.
H6	Analysis initiated outside of the 15 minute EPA required holding time.
L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
P4	Sample field preservation does not meet EPA or method recommendations for this analysis.
P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
