**Subject: Truax Field Air National Guard Base, Final
Perfluorinated Compounds Site Inspection Report**

Dear Mr. Schmoller:

Thank you for providing comments on the Draft-Final Report for Per- and Polyfluoroalkyl Substances (PFAS) for the Truax Field Air National Guard Base located in Madison, Wisconsin. The following provides responses to your comments:

1. In several locations the report states that Truax Field lies 6 miles from the City of Madison. The field lies directly adjacent the city.
Response: This has been updated throughout the document.
2. In Figure 9 the analytical results for PFOA and PFOS in monitoring well TWBB02 should be yellow shaded to show exceedance of the current drinking water advisory level.
Response: The figure has been revised.
3. The soil and groundwater screening levels contained in the report may change over time. In state and federal government there is a constant evolution of these health-based levels as new information becomes available. As these criteria are updated the WDNR would apply them to the investigative findings at this site.
Response: Changes in screening levels will be evaluated prior to conducting future investigations.

A Final Site Inspection Report for the Truax Field Base is enclosed which has incorporated changes, where applicable, based on these comments.
