POET	point of entry treatment
Tyco	Tyco Fire Products LP
USEPA	United States Environmental Protection Agency
WDNR	Wisconsin Department of Natural Resources

1 INTRODUCTION

On behalf of Tyco Fire Products LP (Tyco), Arcadis U.S., Inc. (Arcadis) prepared this Well Survey Report (Report) in response to the Wisconsin Department of Natural Resources' (WDNR) request to identify wells in an area located beyond the established study area as outlined in a letter from the WDNR dated February 19, 2020, related to the Ansul Fire Technology Center and the Tyco Fire Protection Products facilities located at 2700 Industrial Parkway South and 1 Stanton Street (respectively) in Marinette, Wisconsin (Figures 1 and 2). Preparation and submittal of this Report should not be interpreted that Tyco or Arcadis will conduct any of the testing or evaluation activities beyond submittal of the information provided herein, or that either Tyco or Arcadis are providing technical, regulatory or legal advice to any party.

2 BACKGROUND

2.1 Site Description and History

The Ansul Fire Technology Center (FTC) is a fire suppressant training, testing, research, and development facility built in the early 1960s. The FTC encompasses approximately 380 acres (Figure 1) with approximately 9 acres used as the Outdoor Testing/Training Area (OTA). The OTA includes the Firefighting School area (where firefighting scenarios are simulated) and the Research and Development area (where product testing occurs). The remaining area of the FTC is used for manufacturing, warehousing, office, classroom, parking or is undeveloped.

The FTC is bordered by industrial and commercial properties to the west, and industrial, commercial, and Marinette School District property to the north. Agricultural land, a cemetery, a golf course, a community center, and undeveloped land owned by the University of Wisconsin Board of Regents and private owners border the FTC to the east and south.

Aqueous film-forming foams (AFFF) historically have been used at the OTA as part of research and development, quality testing and firefighting training activities. Detailed history of the use of foams at the OTA was provided in Tyco's response letter to WDNR's Additional Information Request letter, submitted March 12, 2018.

At the Stanton Street campus, Tyco operates a fire extinguisher and fire suppression system manufacturing facility. Other historical operations have taken place at the facility including lumber mill operations and agricultural manufacturing including herbicides (CH2M 2015).

The Stanton Street facility consists of multiple tax parcels, totaling approximately 66 acres. It is located in the north-northeastern portion of the City of Marinette, directly south of the Menominee River (Figure 2). The land surface within the site is generally flat, much of it paved or covered by industrial buildings.

2.2 Current Study Area

As a result of detecting per- and poly-fluoroalkyl substances (PFAS) in off-site groundwater, a potable supply well sampling program of approximately 140 private drinking water wells was initiated in December

2017. Tyco immediately offered bottled water services to community members within the private drinking water well sampling area at no cost to the residents.

As sample analyses were completed, Tyco offered point of entry treatment (POET) systems to those locations where PFAS was detected and confirmed in potable well samples at concentrations above the United States Environmental Protection Agency (USEPA) Lifetime Health Advisory Level (HAL). Working in conjunction with the Wisconsin Department of Natural Resources (WDNR), Tyco assessed available data and took action by expanding the private well sampling area in January 2018. Tyco then expanded the POET system offer to include any private drinking water well with a confirmed detection of perfluorooctanoic acid (PFOA) or perfluorooctanesulfonic acid (PFOS) above the laboratory reporting limits for these compounds. To date, POET systems have been installed in 40 locations and Tyco has tested 171 private drinking water wells. The POET systems and potable wells within the defined private drinking water well sampling area (PWSA) will continue to be sampled as presented in the Revised Long-Term Potable Well Sampling Plan (Arcadis 2018) that was approved by WDNR, and future updates to that plan. An updated version of that sampling plan will be provided to WDNR in April 2020. Residents within the defined PWSA will continue to receive bottled water service or POET system maintenance as requested while Tyco works to install a long-term drinking water solution.

Tyco's PWSA is roughly bounded to the north by University Drive, to the west by County Road B, to the south by Rader Road and to the east by the Bay of Green Bay. Figure 3 outlines the PWSA.

The PWSA is defined using data collected from desktop studies of local geology and analytical data from field investigations. It is the total area of potential effect of PFAS containing groundwater associated with FTC and Stanton Street facility. There are multiple lines of physical and chemical evidence that show that the detections of PFAS to the south of the PWSA are associated with as-yet unidentified local sources unrelated to the FTC as discussed in the Southern Area Groundwater Evaluation Report (Arcadis 2020). As noted in Section 1 above, it is not Tyco's intention to sample private drinking water wells outside of the PWSA.

2.3 Expanded Study Area

As requested by the WDNR, Arcadis evaluated the requested expanded study area outside of the PWSA as identified on Figure 4 for the presence of private drinking water wells. The expanded study area proposed by WDNR is bounded by the Town of Peshtigo and City of Marinette boundaries to the north, Pleasant View Road to the west, Leaf Road to the south and the Bay of Green Bay to the east. The list of parcels in Appendix A contains all the parcels where there is the potential for private wells to be present based on review of Marinette County Geographical Information System (MCGIS) data obtained from Marinette County and review of aerial maps to confirm the presence of structures that may require drinking water through the use of a private well. Additional desktop reviews of the WDNR Well Records Database and Well Driller Viewer were used to compile a list of Well Construction Records available for the expanded study area (Appendix B). The Appendices are inclusive of the parcels and wells located in the PWSA. The methodology used to develop these lists is discussed in the following sections.

3 METHODOLOGY

3.1 Desktop Review of Marinette County GIS Parcel Data

Parcel data were obtained from Marinette County and mapped to indicate the parcels that have improvements (Figure 4). A parcel list was generated from the MCGIS data available and further evaluated using additional resources as described in Sections 3.2 and 3.3.

Parcels within the City of Marinette that receive drinking water through the municipal water system were excluded from the evaluation.

3.2 Desktop Review of WDNR Resources

The WDNR Well Records Database and Well Driller Viewer were used to locate well records available for the expanded study area. A list of these well records is included as Appendix B.

3.3 Desktop Review of Aerial Photographs

Parcels within the expanded study area were reviewed using aerial photographs from MCGIS and Google Earth to determine if a structure was present. If the MCGIS indicated the parcel had improvements and/or the aerial image confirmed the presence of a structure, it was assumed that a private drinking water well was present on the parcel.

4 RESULTS

4.1 Summary of Parcels and Potential Private Drinking Water Wells

The estimated number of private drinking water wells was based on the number of parcels in the MCGIS with improvements and includes parcels not identified as having improvements that contain significant structures where it is suspected a well may be present. Table 1 is a summary of the findings. The information below includes the approximately 210 parcels and 171 drinking water wells already identified in the PWSA. The results for Tyco's prior well sampling within the PWSA have been provided to WDNR.

Table 1. Parcel and Potential Private Drinking Water Wells Summary Table

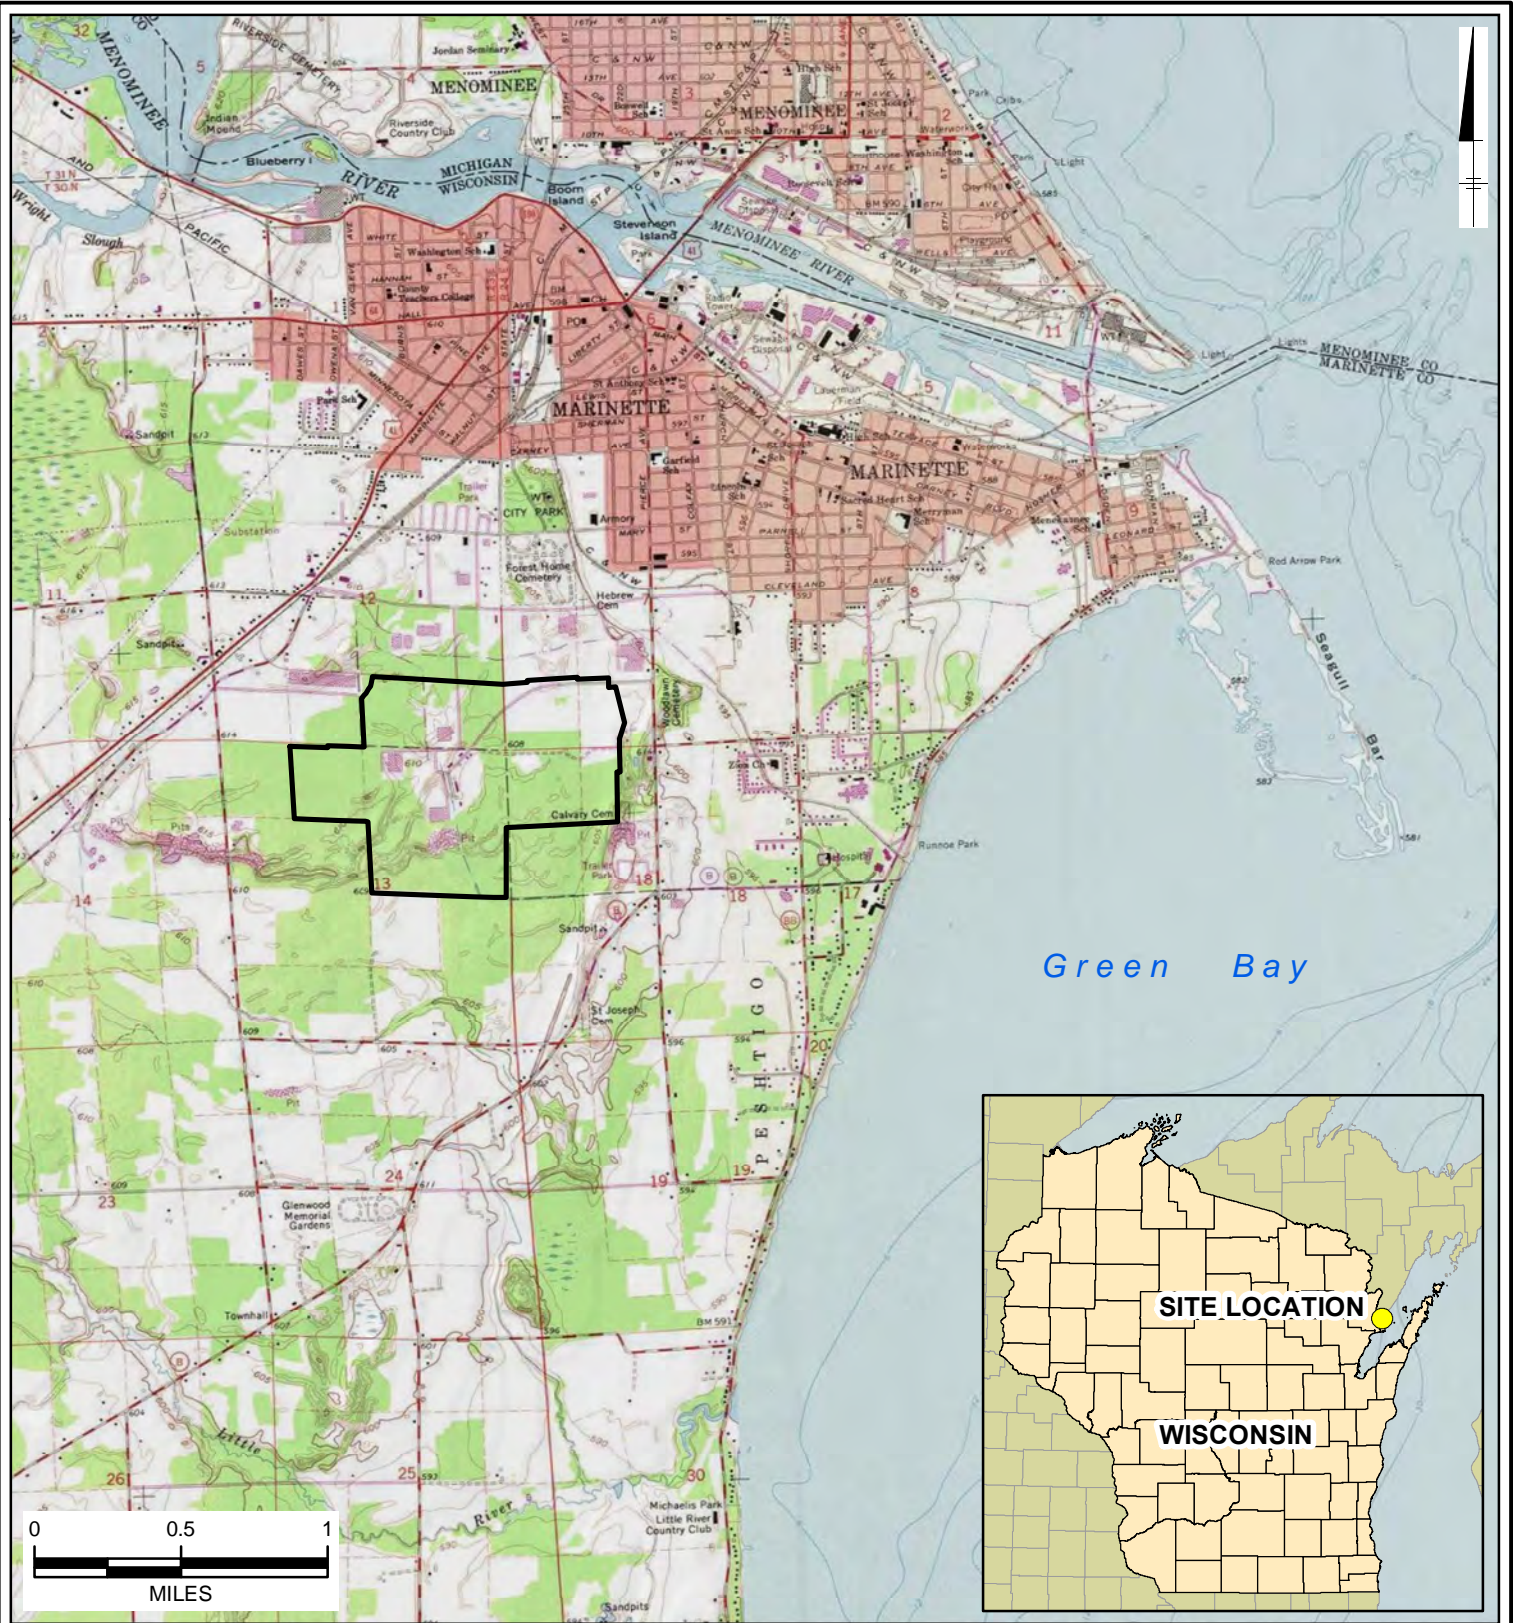

Total Parcels in Expanded Study Area	6,054
Total Parcels Not Connected to Municipal Water	968
Parcels with Improvements	697
Parcels without Improvements	271
Parcels with Structures	709
Parcels without Structures	259
Wells Identified in WDNR Database	365
Estimated Number of Private Drinking Water Wells	700
